CLAY BIRDS! CLAY BIRDS!! CLAY BIRDS!!!

Beck's Patent Clay Birds and Trap.

Pronounced by all Who Have Seen it as the Best Substitute ever Invented for a Living Bird.

Fites like a live bird; is as hard to hit as a live bird; affords as good practice as live birds, and at a nominal cost.
The bird is made of clay, burned hard, and breaks when hit with shot. with shot.
Our Trap will throw the Clay Bird further than any trap will throw a ball; keeps it in the air longer, and gives the shooter plenty of time to cover. In using these birds you secure

Better Practice than Glass Balls Give,

And avoid the many objectionable features of balls. Give them a trial, for you are sure to be pleased, and you can't avest a small sum of money to better advantage.

Price of Birds, 32.00 per 100. Traps, \$6.00 each.

Southern Wood Hotes.

Whether in the tangled thickets of spice wood in Indiana or Kentucky, the home of the ruffed grouse, or in the somber silence of a Southern pine forest, there is a beauty in the forest, trackless and illimitable, that can only be surpassed by the solemn expanse of ocean itself; and, indeed, there is a great similarity between the dwellers in the woods and the reckless sailors who brave death in every form upon the mighty deep.

At this season of the year one can see vast numbers of doves feeding on the grass seeds in the cotton patches, or on the few cow peas that have been left by the hogs in the corn-fields. They afford very fine shooting, they go like the wind, and none but a hard-hitting, close-shooting gun will bring them to grass.

I have been much amused at the discussions that have been going on in FOREST AND STREAM anent the holding on a bird, when a cross shot or ahead. As all the shots at doves are cross shots, these gentlenien, were they to shoot here, would have a "beggarly account of empty" shells and no birds. At forty yards, or further, I aim from three to five feet ahead of my bird, and even then I sometimes shoot behind. En passant, I remark that the only successful way to kill either quail, ducks, or doves is the "swing." Follow the course of your bird, throw the gun ahead, and pull trigger simul. taneously. All this talk about "snap" shooting and deliberate shooting is all "bosh," Deliberate promptitude is the rule, and he who departs from it can never shoot well, nor even make an average shot. Some writers say that you must have the sight in front of your bird. I have never found any use for the sight on my gun. I never see it when I shoot. Nor do I believe any but a "poke shot" ever does. See that your gun is on a line with the bird, for goodness' sake; pull trigger, and don't, I beg, "poke !"

Following in the wake of the flocks of doves are great variety of hawks and other predaceous birds, From the stately buzzard hawk, down to the tiny "blue darter," they swarm over all the fields. There is a hawk here called the "rabbit hawk," of which I have never killed but one specimen, and that being similar to your marsh hawk, but with a greater breadth of wing, and a much larger and finer bird, Indeed, a specim wounded very severely was almost eagle-like in size, I

was sitting on the banks of a little stream, hathing my hands and face, after a long tramp after quail, when, happening to look at my dog, I saw from his eager looks that he saw some bird in the air. To snatch my gun and look up was the work of a moment. Coming down, sailing along with no perceptible motion of his wings, was a huge bird, with square head and fierce, yellow eyes. I had no time to change my shells, so I gave him each barrel in succession. He fell like a stone to the second barrel, but the Ss were not heavy enough. Before I could reload he rose and flew off with a rapidity of which I could scarcely believe so large a bird capable. I am sure that at about twenty yards, the distance that I fired at him, I have killed mallards stone dead with the same gun and the same size of shot. I should like very much to see this bird dead, for they are very rare indeed in the South

"The "blue darter" (Falco minor) is the most destructive of all our birds of prey. Not much larger than a quail, they possess great muscular power, and can carry of quail that this little robber finds in the open. One gone, day after day he feasts upon them, until not a solitary one is left to nine his cheerful Bob White in the

The "blue darter" (Faloo minor) is the most destructive of all our birds of prey. Not much larger than a quail, they possess great muscular power, and can carry off a dove with no trouble whatever. We to the covey of quail that this little robber finds in the open. One gone, day after day he feasts upon them, until not a solitary one is left to pipe his cheerful Bob White in the morning, or call in plaintive notes in the eventide. He has eaten them all. No wonder the sportsman hates him. No wonder he crouches down by the fence and waits by the hour for his arrowy form to shoot over him. And then, with what real joy he sees the cloud of feathers float down the wind, and knows that the spoller is laid low. The Sa do the work for him very effectually. There is another species of hawk here fully as destructive as the "darter," but in another direction. He is called in the South, par excellence, the "chicken hawk," and woe to the brood of little or big chickens that this Ishmaelite bird finds wandering from the farm-house, from under the watchful eye of the good wife. He swoops down in the quiet gray of the morning, ere the farmer's boys have fully opened their eyes, and the chickens are fondly looking for those worms of which they dreamed during the stilly watches of the summer night. What a hurah! Aunt Dinah, the black cook, salies forth with a broom; Jake, her son, with a stool, upon which he has been sleeplyly nodding; her daughter, Cleopatra, with the frying-pan; the farmer, with a rusty double gun, shouting, "Where is he; where is he?" the dog, Bose, with an intelligent appreciation of the exigencies of the situation, having in the meantime seized Jake by the leg, while the audaclous cause of all this uproor is sailing off with a chicken in his claws, which he will pick and eat with a serene contempt for Aunt Dinah, Jake, Cleopatra, tag farmer and Bose. He repeats the experiment next morning with precisely the same result, only varied as to the actors in the tragedy, for Bose, with an inpartiality highly to be

gun below, who, with a deep sigh over the limited capabilities of shotgans, "passeth." Yet, again and again have I killed them, but often with an expenditure of ammunition not at all in agreement with the value of the game. The only satisfactory method of shooting them is with the rille. Then you fool Mr. Squirrel, indeed! For, as the whip-like report rings upon the still air, you see him quiver for a moment upon the limb, and then fall sheer a hundred feet without touching a limb.

There is a nuisance to the quail shooter here which you Northern sportsmen know nothing about. I mean a little bird having a tail longer, in proportion to their size, than the proudest of all peacocks; a true sparrow, called here the "swamp sparrow" but no more like the swamp sparrow of Kentucky than he is like a wild turkey. Any bird dog will take their scent, and I have seen the best-trained pointers come to a dead point on them. You should see the look of shame and indignation that crosses the dog's honest face when the game is flushed and found to be a sparrow. He haugs his head with a mental determination never to allow himself to be thus trapped again, but the very next one he falls again.

We have had no enjne-shooting here for a long time.

uon mat crosses the dog's honest face when the game is flushed and found to be a sparrow. He hangs his head with a mental determination never to allow himself to be thus trapped again, but the very next one he falls again.

We have had no snipe-shooting here for a long time. In fact, such an impetus has been given to sport of late, and so much have most men improved in their shooting, that the Northern sportsmen do not leave many snipe for us of the South. The national game bird is Bob White, loved of all generous sportsmen.

A December quali is the hardest bird to hit, and being hit, the hardest bird to bring to bag for his size in the world. The man who can kill them can kill anything. You kill seven or eight in succession, and you plume yourself that you are going to redeen that miscrable shooting that you did in the branch the other day. For, entre nots, you missed fully that many or more in the thick cover. You walk along with clastic steps, and lo I another point. You walk along with clastic steps, and lo I another point. You walk along with effect should be shooting that you did at that little fast diminishing point, and you are not rewarded with a single feather. You go on, and directly you shoot again, and this time the feathers float down the wind in a little cloud, but your bird only flies with accelerated speed. Next time you lire at fifteen or twenty yards and your bird is torn all to pieces. Thus you shoot all day, but while making a fair bag you wonder why you cannot make your uniform doubles, as you did in October. No man can do it. The best field shot in the world can make but few doubles on December quall. Not any with whom I have ever shot.

Many writers for your paper state that they kill most of their qual within twenty-five yards. Such men do not need any but the most ordinary guus. A good gun will render all birds killed at that distance worthless for eating, or nearly so. My own opinion is that if sportemen were to use No. 6 instead of No. 8 in their robots in the world. In concluding th

A SANGUINARY DEER HUNT.

A SANGUINARY DEER HUNT.

But I never chose to put make than a single half into my piece; and in this manner, being a good marksonan. I procured a considerable quantity of game.—HENVENUTO CELLINI.

HERE were two of us. The first clause of the sontence I have quoted from that delightful book, Cellini's "Memoirs," hits me very well, for I shoot always a rifle; but my companion—well, the Captain is something like one of the speakers in a conversation in the last number of Pauch.—Ola Bop-What's your tather?

New Boy—Poet, painter, scaliptor, architect and musician. Old Bop-Orimini'l is he great're lived.

New Boy—The sreatest that are you going to be?

New Boy—The same as my father, only greater.

Were he interrogated he ought to answer—although he would not, as his modesty sits astride the pyramid of his perfections in the mysteries of wood and water craft, looking as big as any of the pile—something in this way:

"Shoot any with a rille?"

"Good as they make 'em."

"How are you with the shot gun?"

"I can handle a shot gun twice as well as I can a rifle,"

(I know he killed m pheasants last fall.)

"I don't brag about throwing a long line, because it's hardly ever necessary in fishing, but I can place a fly as straight as I can shoot; and as for fish—I"
I remember meeting him one writer, in Philadelphia, just after he had heaved that between the wolves and the bad weather he had lost—I forget how many of the fine sheep he had on his place up the country.
"Why, hy Jove, old fellow! How are you? I am very glad to see you. How are all the sheep coming on?"
"Oh pshaw! sheep-raising is an infernal humbug. Do you know I raught four thousand rout last summer?"
Dear old fellow. How strange it seemed that we, who in times gone by had been so much together, should be starting out in company for the first time in thirteen years. Why, in the old days we had killed deer and caught trout among the Adirondack lakes and streams; together waded and whipped the "Lock," bagged ducks on the North Cavolina sounds and taken pot shots at bears in the Dismal Swamp, to say nothing of such small affairs as the first day of the season and a warm corner of the marsh, when the tide was good and rail plenty; then we had been two years together in the army.
It seemed to us both that it could not be for naught that we should be starting out that morning. It was the 21st of November, A. D., 1879. The snow was fresh and just

It seemed to us both that it could not be for naught that we should be starting out that morning. It was the 21st of November, A. D., 1879. The snow was fresh and just right for tracking; the wind bid fair to blow, for a still hunter likes it noisy overlead; and then we had not huntiel together for so long, and we had doubtless improved in the long years of separation. Surely the old luck would hang by us and we should return laden with the spoils of the chase. It comes back to me now that a year or so ago I wrote you an account of "The Rock Camp," a description of bear-hunting, in which I recited the ordinary requisites for a bear-hunt, and showed, at least to my own satisfaction, that one may have a very Camp, 'a description of oser-initions, in which Frected the ordinary requisites for a hear-hunt, and showed, at least to my own satisfaction, that one may have a very enjoyable hunt and delightful time generally, even when some one inconsiderable trifle—in that case it happened to be the bears—is omitted from the list. And now you begin to have a suspicion, a little bit of a speck of an idea as to what is coming, don't you? You know how it is in the story books, where the poor, aspiring but determined youth, or the tender, pensive, thoughtful (getting up diablerie, the'finale generally shows, and in this case it was the wretched does that floored us) madien stands at the threshold of action, as it were, wondering, doubting perhaps; then admiring, wishing, hoping; presently daring, and then, alas, experiencing. As yet, however, for our illustration, only standing on the threshold and looking out upon the wind-puffed clouds and the dark blue-black horizon of the cruel, cold world. The horizon of the future ought to be blue, because of its vacuity, and yet it is so often rose-colored.

Cold it was, certainly; the thermometer not yet below.

of the latture ought to be one, because of its vacuity, and yet it is so often rose-colored.

Cold it was, certainly; the thermometer not yet below zero, but fow enough to make active exertion very agreeable where we were. We were looking out on a very blue-black horizon, the dark hemitock-crowned ridges that marked the course of the Clarion, Instanter and Straight creeks. 1 had not thought about hunting. I happened to have a very good chance to visit the Captain, and perhaps to eat my Thanksgiving Day dinner with him, but the snow, which began falling while I was yet Rying along in the comfortable Pullman car, kept at it all the while, as, wrapped in ulsters and buffalo robes, we talked over old times, the Captain and I, scated in a covered wagon behind his black mares which put us over the seven miles from the station to "home," and by morning had fallen in quantity just right for a "good tracking snow."

The Captain had killed several deer this fall alrea The Captain had killed several deer this tait aready. Were deer plenty? Yes; the oil wells over about Kenzua, etc., had driven the deer into this part of the country, and we were sure of great sport if the snow held. "And how about guns?" "You take my Winchester. You always shoot a Winchester, It will just come with?"

You always shoot a Windnester. It will just come right."

"Then what will you use?" "Oh, I'll take my light shot gun and uso buck shot."

Did I wish for my own gun? Possibly you may find out presently. I shot an 1833 model with 20-inch barrel and rather coarse sight, but I generally know just about where it will shoot and how much of the front sight to allow. The Capanin's gun, which I was to use, is an 1866 model, long barrel, using only two-thirds the powder of the other, and with a new front sight put on only a few days before my garryal. I had no idea how the gun would hold up. Moreover, the cartridges had run out and all that could be had in Wilcox were old Henry cartridges, with little powder and pointed ball. I was idiot enough to march off without trying the range of the gun.
"Look here; do you want me to go on and give you an account of our doings? All about them? Because you know we on."

an account of our doings? All about them? Because you know we on—"
"What! You do not mean to say that you two people—mighty hunters—went out on that snow for—for—how many days was it, and only—on-l-y—a—a—a—h—I—"
Exactly—certainly we did; just so. You have hit it to a T" (int it better than we did). We went out as long as the snow lasted, you know, and that was for—for—what-you-may-call-it—a—and—and then—we had to come home every night, you know, because the Captain could not lie out at night on account of his health; and so we only got a little while to hunt each day. We would strile a track about 9 A.M. and had to stop hunting by 3 r.M. to get home.
How many deer did we get? Why, as I said, we only—a—we didn'c—a. That is—a—
This is worse than the Rock Camp. I will write you a letter, and sell you about it. You don't like people to be letter, and sell you about it.

he's a whacker," There he was twenty steps off, I stood on tipice; could not see his head, only the horns and ears. We could hear him shift in a suspicious manner. I raised the zun. "Bring him out of that." "Ma—a!" said the Captain. Up jumped the buck, a veritable hand eredo, and I—as a certain Philadelphia lawyer once said, "Think of it, gentlemen of the jury, it might have been murder!"—missed him clear and clean. The captain took a running shot, and the buck left unharmed. We went out on the 24th. Huge old buck and big doe. Could not separate them. Saw them standing together after awhile; estimated, one hundred yards; brushy. I fired at buck standing; gave half the front sight. Buck left in peace. Doe jumped a few steps to left—further than we thought; mistook her for fawn. Captain cried, "Kill the fawn." Could not see her. Handed him the gun; he fired five shots in quick succession. Heavy cartridges, all undershot, Doe left. Followed on. After a while saw the buck standing watching back-track. Snapped at him. Tried to throw out cartridge, Tried again. Deer saw motion; vamoosed, Near night; bear track; on the jump; somebody scared him: no use following. Gooe away over to Driftwood.

out cartridge and pump in new out; variations approad off cartridge. Tried again. Deer saw motion; varmossed, Near night: bear track; on the jump; somebody scared him; no use following. Gone away over to Driftwood. Gave up and went home. Dinner, glass of wine, pipe, letters and papers, hed.

There you have it all.

Game in plenty; deer thick; a good many hunters in the woods. Two friends of yours were out for several days, and got—[Come, that will do.—Eb.] and got—[That will do.—Eb.] All right.

LOST IN THE MAINE WOODS.

With dog, gun and blankets I loft Bangor the 30th of October, 1870, via E. and N. A. Railway, arrived at Jackson Brook station, and by Manly Stevens' line of stages for Princeton was conveyed as far as Waite, where I took conveyance to the house of Stephen W. Neal, where I was kindly entertained for the night. here I was kindly entertained for the night. On the 31st, after breakfast, with Mr. Neal as guide, I

of the 1sts, after breaknast, with Mr. Neal ag guide, I set out for West Musquash Lake—more than five miles—where I was to join Mr. A. H. Benson, the well-known ticket agent of the Maine C. R. R. in Bangor, and George Thornton, of Jackson Brook, as guide and cook.

On the second day of November we agreed for a hunt as far out as Ory Lake, some two miles, in the hope of finding ducks on lake and grouse on way to and from lake.

finding ducks on lake and grouse on way to and from lake.

Soon after leaving camp, 10 o'clock, my clumber spaniel started a covey of grouse. Following some in their flight into the dark woods, I secured three. Mr. Benson and guide passed on before me, the guide saying to Mr. Benson: "Why not help Fairbanks shoot these partridge." "Oh! he enjoys it very much, has just joined us, had bad luck yesterday and we will not trouble him." Following up the wood over which my comrades had passed, I came to a branch road across which a tree had fallen. Seeing a trail up the main road, on I went, unconcerned, expecting very soon to find Ory Leke, and my companions. It is true I gave my attention especially to the spaniel, for it was a fine afternoon and the birds were out in force, and I occasionally bagged one, thinking little of distance. Finally I reached the lake, where, to my surprise, no person was to be seen. The lake was small and I walked around it, taking a short rest, and turned my steps for camp at 2 o'clock. To my-The lake was small and I walked around it, taking a short rest, and turned my steps for camp at 2 o'clock. To myself I said, I will not return by the same road and brook, but beat up a new route in hope of more game, and I turned to the right for a short distance, and then well to the left to bring myself out at the road and brook as I neared my camp. Climbing some quite high land I saw a lake in the distance over the forest. Not for one moment did I question that it could be other than West Musquash, upon whose white sand beach one camp was ment did I question that it could be other than West Musquash, upon whose white sand beach one camp was situated. To myself I reasoned: you are turned about, that is your lake, go in direction of what you can see. Here was my fatal mistake, though I pushed on heedlessly in direction of lake seen. I came out to the lake at dark after a long and tedious tramp, and to my great surprise it was a water I had nover before seen. After discharging my breech-loader quite a number of times without answer, I became fully alive to the fact that I was lost in Maine woods. Darkness and disappointment settled over me alike, and sullenly I retired some quarter of a mile from the lake, built a fire; others were built, settled over me alike, and sullenly I redired some quarter of a mile from the lake, built a fire; others were built, and by light of all I selected a spot for the night and beside the last fire built I sat down to contemplate my situation and take stock of my resources with which to meet the contingencies. I had a box of matches, about thirty in number, five ruffed grouse in hunting-coat, small pocket-knife, dog, gun, watch and some fifteen cartifices.

"What! You do not mean to say that you two people—mighty hunters—went out on that snow for—for—how many days was it, and only—onl-y—a—a—hl—!—"

Exactly—certainly we did; just so. You have hit it do a T' (hit it better than we did). We went out as long as the snow lasted, you know, because the Captain to come home every night, you know, because the Captain of the little while to hunt each day. We would strike a track about 9 a.M. and had to stop hunting by 3 r.M. to get home.

How many deer did we get? Why, as I said, we only—e—we didn'e—a. That is—a—
This is worse than the Rock Camp. I will write you letter, and fellyou about it. You don't like people to be long-winded, so I will put it in your correct style. See now:—

WILCOX, Penn., Nov. 29th, 1879.

Elitor Forest and Stream:—
Just start for home to-day, after a hunt with your friend the Captain. Went out on the 21st. Scored good. I, Winchester; Captain, shot-gun. Started doe before we saw her. Followed. Captain got running shot; broke a leg. Followed on. Met a dog; dog had caught for long and the proceeded far, the dog returned to me rubbing him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, him to road where he had backed it, and we lost him, here can be an an answer; but such a yell I was started about to read the proposed and Hunger had made close acquaintance with me by this

busily engaged in settling the question as to length of claws, teeth, kind of fur which this monster must possess, when again came this unearthly yell, so frightful this time that I left the thought of animals, claws and teeth, believing that nothing under the heavens cound send out such tremendous screeches—the last always more hellish than the former—but a screech owl. At 4 o'clock the moon settled down, leaving the woods dark, and I built a fire and rested until dawn, continuing east by stars and sun. Finding a road, I followed, and the same proved to be a corduroy built for the most part over the brook, though in some blaces the brook was over

east by stars and sun. Finding a road, 1 followed, and the same proved to be a corduroy built for the most part over the brook, though in some places the brook was over corduroy. This terminated in an awful swampy bog, near the lake evidently, though I was disappointed in not seeing the lake, and was obliged to retrace my steps, which cost me a hard walk of several miles. In this deep, dark swamp I found a deer path, which I followed for a mile, coming upon higher swamp land. Here I climbed a tree, and from the top, which was only reached after great effort, I beheld a great swamp of spruce woods with a ridge of hard wood far in the distance on either hand. Descending, I changed my course to the south, and after a very long tramp I passed over the ridge of land in the hope of finding the lake. Upon the side of the ridge, at 11.30 a.M., I came upon an old camp more than fifteen years old. I halbed to roast a grouse and rost; water was at hand, and myself and dog both showed signs of great fatigue. The grouse devoured, I wrote a notice upon some birch bark:—

I am lost! for God's sake find me-

of great fatigue. The grouse devoured, I wrote a notice upon some birch bark:—

I am lost! for God's sake find me—

dating and signing same. All of the day, so far, I had helt trails as plain as possible, well knowing that my friend Benson would never quit the woods without tidings of me in some form. I had fully comprehended my situation, my chance of finding my way out, of being found, and of remaining and wandering about in this great wood for weeks, and finally, when all else should fail me for food, of cating my faithful spaniel, and of the awful death by starvation if all should fail inally. It was not a frivolous question, and no smit overcame my countenance as I sat in the sun by the fire that day. Here let me say, that in years past I had invested in my own wars, in life insurance polices, to the amount of \$16,000, and remembering my wife and children, in view of my condition, it was a source of consolation to me that provision was made for them in the event of the worst before me.

About 12.30 I reluctantly left the old camp, and within an hour came to a wood road which had the appearance of having been used within two years by lumbermen. The road led me from my course westerly, but I resolved to follow, and, if possible, get sight of the lake, trudging along with eyes upon the ground to pick out good footing, and thus save the wear and joggle of the body as much as possible. Reader, inagine my joyful surprise when, casting my eyes up and forward, I beheld two men. A moment told me they were lumbermen, in the act of hewing a sled bar. Walking up to the nearest man I said with much feeling:—

"If I was ever thankful to see the face of mortal man, it is to see yours."

He gave me such a look that I at once told him my story. He invited me into his logging camp just at hand, making tea for drink and giving me plenty to eat. My heart was light, and so full of joy and thankfulness that I could cat but very little then. To my first question. "Where an I?" he answered, "On Scraggly Lake, and here of our, wit

colder.

On the morning of Nov. 4th we left camp at light, Some snow had fallen, and the day was dark and disagreeable. The guides took the cance upon their shoulders and on we went. It seemed a very long distance, and I felt as though we were turning too much it of he loft, but felt as though we were turning too much to the loft, but I did not offer any suggestions, since I had thus far proved myself the lost man. A mile brought us to the lake, and soon the canoe was launched, all stowed away and away we went. We had proceeded about two miles when one brother said to the other: "Gideon, we are on Scraggly Lake." Landmarks soon convinced tideon that his brother was right, and about we turned. I was careful not to make any unpleasant remarks about this mistake, feeling that I was in their hands. Again we landed, and the brothers took the canoe up with a will, not allowing it to go down until launched in the waters of Pleasant Lake, about one mile. This mistake on the part of the guides will be fully appreciated when it is known and the brothers took the canoe up with a will, not allowing it to go down until launched in the waters of Pleasant Lake, about one mile. This mistake on the part of the guides will be fully appreciated when it is known that these men had for years lumbered upon these very waters. At Pleasant Lake more trouble presented itself; the wind was blowing squally, and with three men, dog, gun and ax in our birch, I did not deem it prudent to attempt to cross the lake, therefore we skirted the shore until the wind had less rake, and then shaped our course to the landing in front of the house of Dock Wooster. Walking up the landing, I saw a large, tall man, with close cut features, fine blue eyes, and light hair reaching to his shoulders. To him I said; "I am one of the lost tribe of the children of Israel." Comprehending at once my situation, he took me into his log-house, where I met his wife and eight children. Here I got thawed out (for ice was upon all in the birch), something for myself and guides to eat, and paid them well for conveying me to Wooster's. About 10 o'clock Dock Wooster announced himself ready, and by canoe took me to a point in the direction of my own camp, and a tramp of two hours brought us to the white sandy beach of West Musquash Lake, whereupon I fired a shot and was answered. Soon we met Mr. Benson, and I rushed forward and grasped his hand, he expressing the same feelings of joy at meeting me. Three shots were then fired at intervals, as a signal that I had returned. The men returned one by one, for my friend Benson had spared no trouble in the effort to find me, engaging the whole crew of Iumbermen, under Joseph Neal, who had just arrived, to begin operations. Mr. Neal, with all of his men, gave up their time, and absolutely refused pay. When Mr. Thornton, our guide, and Mr. Neal were nearing our camp, I went down to meet them. Thornton sprang forward to me, saying, "My God, is it you?" and Mr. Neal came up and gave me his hand as though I were an old friend. Men with such hearts and generous impulses are not always at hand to help the lost and distressed. After a good dinner, the remainder of the day was devoted to a discussion of the catastrophe. I then knew how faithfully my friends had continued to hunt for me.

To those who have followed this account I will add its

my friends had continued to hunt for me.

To those who have followed this account I will add its To those who have followed this account I will add its lesson as I see it. Do not leave your compass in camp as I did, oven when going out with a guide. Always have a map. When you feel you know the course, do not let water seen in another direction divert you from your course. If lost at night, retrace your steps in the inorning. I would have so done, but supposed the lake one of a chain upon which I was camped; it proved one of another chain of lakes.

other chain of lakes.

It seems to me that people in the rural districts are more generous and willing to lend aid to others, without reward, than people living in our cities. My misfortune became known in Bangor before 'my return, and a short notice appeared in the Whig, but I had written my wife a note saying I was out safe. A hound followed me out of the woods against my expressed wish; therefore with two dogs, one led by rope, and with torn shoes and shabby clothing, I presented quite a figure.

Joseph Jefferson was that very evening to appear in the city as Rip Van Winkle. My wife greeted me at my house door, when I pulled the bell, and after surveying me for a moment, said, "Well, old Rip, you have come."

Bangor, Me., January, 1880. H. N. FAIRBANKS.

We supplement our correspondent's experience with this account of what, in the "sporting" parlance of the day, might be termed a six days' go-as-you-please walk. There was no purse up, but the man was walking for his

There was no purso up, but the man was walking for his life:—

This hybrid individual was by occupation a voyageur in summer and a trapper and hunter in the winter season. His mental caliber was very ordinary, being unable to read or write, and his habit apathetic, living much alone. Some of his ponies having strayed off upon the prairie during the winter months, he went in quest of them. The prairie was the native health to him, which he had trodden from infancy with the same assurance that ordinary mortals walk the parement. He had no fear of being lost; every depression in the snow-clad earth, every stunted shrub, was a landmark to guide him on his way. Yet, after an absence of half a day a storm arose which obscured the landscape, and, despite his prairie craft, he found himself lost. He accepted the situation, and knowing that any efforts to extricate himself until after the subsidence of the storm would only prove fruitless, set about making preparations for his safety from freezing. He attached himself to a clump of cottonwood trees as a land-mark, and walked in a circle about its. Night came on, and he still walked. Day followed, and night again found him still walking and the storm unabated. At length his moccasins wore off his feet. He took the long "militaires" from his hadas and tied them on in lieu of shoes. Then he walked on through lite by chewing his leather hunting shirt. The sixth morning found his feet frozen and striking the beaten path like bits of wood; his hands were in a like condition, and his face but little better. During that day, however, some wandering Indians discovered him in an apparently dying condition. They

hands were in a life condition, and his face but little better. During that day, however, some wandering Indians discovered him in an apparently dying condition. They took him to a neighboring fort, and after the surgeon had bereft him of portions of both hands and feet, and taken a piece from his face, he got well.

When found by the Indians, it is worthy of remark that, with the exception of exhaustion, the man was mentally more acute than when he was first lost. During all those fearful days and nights the combination of terror, despair, and, above all, longing for human companionship, had striven against that dull intellectuality and apathetic temperament in vain. There was an indifference to, and ignorance of, the finer parts of the torture which effectually shielded him from danger. He simply did not know enough to experience any of the feelings which would have wrecked a higher order of intelligence.

And here is the story of a man who was lost on the plains in February, 1878 :-

And here is the story of a man who was lost on the plains in February, 1878:—

This unfortunate person was an officer of the company, and had started in the depth of winter, along with four others, to visit a distant post. Their means of conveyance were horse-sleds, instead of the ordinary winter wehicles of the country, snow-shoes and dog-sleds. The gentleman was a first-rate traveler, and accustomed from boyhood to such work. He knew the country well, and for a man of his strong constitution the severity of the winter's cold had too few terrors. At the crossing of the White Mud River he volunteered, as the party with which he traveled had run short of provisions, and their sleds, in consequence of deep snow, traveled heavily, to push on alone, with the intention of sending back assistance from the fort. He followed the track correctly until nightfall, when he lost his way, probably in an attempt to find a shorter route. The following morning he resumed his journey, but in the wwong direction, and, after another night spent on the plains, running about in a nirele to preserve warmth, the third day's travel brought him within thirty miles of the fort, and very far distant from the track. Here hope seemed to desert him; and, after having hung a portion of his clothing upon a tree to attract the attention of any passer-by, he lay down and was frozen to death. When his dead body was recovered, he lay with one hand on his heart, the other containing a compass,

The halt-breeds who found his body read by his tracks he lay

ing a compass.

The half-breeds who found his body read by his tracks in the anow the whole history of this fierce fight for life—

read it with the same case that you read the account from the page before you. There was not a foot-print or mark anywhere but formed a link in the chain of evidence. They knew from the varied hardness of the snow about the man's tracks just how long before they had been made; from the length of the stride when he was walking deliberately and when excitedly, and adduced therefrom the state of mind he was in at the time. They knew he had not taken proper precaution to sustain his failing strength, because the leather of his mittens and moccasin tops, which he might have eaten, was untouched. It was very easily comprehended by these experienced plain-dwellers, too, that the poor victim, on realizing himself as lost, must have grown so excited as to lose his presence of mind, or he would have known his necessary general position with regard to the river, and have acted otherwise than he did. With his practical knowledge of the use of a compass, and of the country over which he traveled, he could have brought himself to any point he chose. But the dread terror of being lost had deprived him of reason in three days.

Matural History.

NOTES ON THE PINE GROSBEAK. (Pinicola Enucleator.)

Y ESTERDAY I saw three of these beautiful birds in-dustriously picking up their dinner in a patch of woods. They were quite tame, and I drove within twenty feet of them, and paused quite a while to observe were quite tame, and I drove within and admire them, as they are old friends of mine. Four years ago they were quite plenty in this vicinity, and a large flock of them came regularly every morning to feast upon some frozen apples that hung on a tree within ten feet of my window. They were very tame, and sang so sweetly that I determined to capture some of them if Fixing a slipnoose upon the end of a fishpole I possible. succeeded in roping in a pair of them; the male was a young one, and the female I judged to be two or three years old. There was an old male in the flock, gorgeous with his beautiful scarlet plumage, that I tried very hard to capture; but he was too wary for me. I got the noose over his head several times, but he would twist out of it with scarcely an effort, and never move from his perch nor cease his cheerful song. He always appeared glad to see me, and to be quite interested in my experiments; he would nod and wink at me in the most knowing manner in the world, and, in spite of my best efforts, he preserved his liberty, and after a few days I saw him no more.

The pair that I had captured I placed in a large breeding cage that was about three feet square ; they did not appear to be at all alarmed, but took kindly to their new home and at once commenced eating, and in less than an hour they were twittering and singing, happy and contented. For many weeks they appeared to thoroughly enjoy themselves, and became so tame that when I let them out in the room they would fearlessly alight upon my head or shoulder and feed from my hand. I never saw such beautiful feathered pets; they kept up an almost constant song from early dawn until every one in the house had retired for the night. Their song was not loud but very sweet and musical.

We were all very happy in their companionship until, alas! one fatal day, inspired by my evil genius, I brought home a newly made kingbird's nest and carofully placed it in one corner of their cage, and all of us gathered around to see what they would do. The male did not pay much attention to it, but after a cursory glance settled down on his perch and resumed his song. male from the first appeared to be very much interested; her eyes glistened, and her head kept bobbing and turning, and as soon as the nest was in place she hopped up and perched upon its edge and critically examined every portion of it. She appeared very much pleased, and with a low expressive chirp alighted upon the perch, and with many knowing nods and smirks and pretty little ruffling of her feathers, she sidled up to her companion, all the while talking and crooning in her most silvery accents, and throwing her wing over him lovingly nestled close to his side, and in dulcet tones, with drooping head was sweetly murmuring the "old, old story," when he—the heartless brute-awkwardly backed out from her loving embrace, and nonchalantly walking over to the feed dish commenced eating. With a plaintive chirp she followed him up and ardently pressed her suit, but when she approached him he would retreat, and after several trials with no better result, he took refuge in one corner behind the bath dish. Then, with a despairing glance at the loved nest overhead, with each particular feather standing on end, and with a harsh, discordant croak that plainly said r-r-r-evenge, she went for him tooth and nail. and whacked and banged him around until, fearing for his life, I interfered and made him desist. No sooner did I take my hand from the cage than this incarnate fury pitched into him again, and I was obliged to separate then,

After a week of solitary confidement, during which neither of them uttered a single note of song, I returned him to the cage with her. No sooner had I shut the door than, with dilated eyes and open mouth, this virago went for him again and knocked him clear across the cage. I picked up a little stick and struck her two or three times

and made her leave him. He had been very meek and forbearing up to this time, not making the least show of resistance; but no sooner did he see the effect of my punishment upon her than he holdly asserted his manhood and bravely sailed in and gave her a thrashing that completely subdued her.

There was no quarreling after this. She sulked and moped in her corner, refusing food and drink, and a few days after we found her dead—a victim of blighted affec-After she was gone a change came over the male; be uttered no sound save a mournful chirp, and appeared to miss his companion sadly. He gradually pined away, and in less than two weeks we "laid him gently by her side." I do not propose to adorn my simple tale with a moral, but cannot forbear expressing the hope, dear reader, that neither your end nor mine may be like this. Springfield, Mass., Jan. 15th.

WHITE DEER.—The Richmond (Va.) State has recently contained a number of notices of the killing of white deer in Virginia, and has devoted some space to speculations as to the origin of this new "species" and the causes which brought it into existence. The strain on the intellect of the scientific editor of our contemporary ought to be relieved, and we therefore take pleasure in assuring him that white deer are not very uncommon, scarcely more so than white robins, and that they are killed not infrequently in all sections of the country. Albinism is a freak of nature too commonly observed to excite much surprise.

BIRD NOTES FROM PENNSYLVANIA, - From the Daily Local News, of West Chester, dated Feb. 7th, 1880, the following mention of the bluebird is taken :

tonowing mention of the bluebird is taken:—

Mr. Speakman Gray, of Caln Township, crected a bird box on his premises, which wastaken possession of during the warm weather we had a few days ago by a pair of bluebirds. Three eggs were laid by one of them in this box, which was blown down in the recent storm and the eggs broken. The birds were hovering around the premises for soveral days in search of their nest, and were apparently in great tribulation over their loss.

Hawks, other than sparrows (T. sparverius), and redshouldered, are rather scarce.

I have this winter seen or obtained twenty odd of the red-shouldered species, all of which were in the adult plumage; not one young bird was noted.

Other season's collectors hereabouts considered them selves fortunate if two or three adult red-shouldered hawks were taken. An immature bird of this species, however, was not looked upon as rare or specially desirable. The query with the writer is, what has produced the unusual presence of only the adult red-shouldered

Sparrow hawks and an occasional sharp-shinned hawk almost daily enter into West Chester and regale themselves on English sparrows, to the great satisfaction of the citizens of this place.

Crow blackbirds and robins are now abundant. Birds of these species in limited numbers may be found as residents nearly every winter.

A lady, whose veracity is unquestionable, tells me that some few winters since she caught alive a number of snow-birds (J. hyemalis). One of the number got so tame as to follow her about the house and yard; when called it would come and alight on her hand.

One day, in her yard, our informant was engaged in feeding her pet, it sitting on and eating from her hand While thus occupied a cooper's hawk swooped down and snatched the bird from the lady's hand. The hawk after committing the depredation flew to a tree a few yards distant, and only vacated it after several stones had been hurled (no doubt wide of the mark) at him. B. H. W.

West Chester, Pa., Feb. 19th, 1880.

ABOUT THE BOHEMIAN WAXWING.—Brockport, N. Y., March 2d—Editor Forest and Stream.—In Dr. Sterling's notice of the Bohemian waxwing (Ampelis garrulus) (FOREST AND STREAM, Feb. 26th are soveral errors. So far from "never before been taken in hand by an American naturalist" previous to 1839, it was a well-known though rare visitor to several States. Audubon in 1838 mentions it as occurring in Pennsylvanis and Long Island, several being shot in 1831 and 1832. In the latter year it also occurred in Hoston. Several were shot in Nova Scotia in 1834. From these specimens Audubon's figures and description were taken. Dr. Sterling is also in error about any doubt existing respecting Richardson's specimens. Mr. Drummond shot several in March, 1826, near the Athabasca River, and Richardson met with it the same year at Great Bear Luke in flocks May 24th. He also saw a flock of several hundred on the Saskatchewan the following year in May. Bonaparte describes and figures the bird from Athabasca specimens in 1828 and Richardson in 1829.

son in 1829.

As to Audubon's letter and Dr. Kirtland's skin there must be some mistake, as Audubon was well acquainted with A. garrulus as an American bird before 1839.

PEREORINE.

We thank our correspondent for so promptly calling our attention to this very manifest error, and feel ourselves to blame for the inadvertence which allowed it to appear in these columns.

The statements of Audubon and Richardson are so nositive as to the occurrence of the bird at the dates they mention that there seems to be no possibility of a doubt as to Dr. Sterling having made some mistake.

ardson's descriptions are taken from a male and female killed at Great Bear Lake May 24, 1826. Bonaparte's from a female killed at Athabasca March 20, 1825. Full information on the early history of the species can be obtained by consulting the authors referred to.

BEAVER-CATCHING IN CANADA.

NE of your correspondents has rather a queer story about having kept a mink ten hours under water without drowning. That mink must have been specially built for the purpose, or else provided with some patent apparatus for breathing under water, because an ordinary mink will drown in about five minutes. I can assure you of this from my own observations, as I have drowned them often, when caught in steel traps, in order to keep the skin white and clean. If they are killed with a stick, it leaves a red patch on a pelt, which spoils its appearance.

to keep the skin white and clean. If they are killed with a stick, it leaves a red patch on a pelt, which spoils its appearance.

I also had occasion to drown a beaver once, in order to settle a point between a Canadian trapper and myself; he maintained that a beaver could renain under water for an hour without drowning, while I thought that a quarter of an hour would be the utmost. We selected for the experiment a middling sized beaver, with the following results. We secured him by putting his fore paw in a No. 3 Oneida trap (Newhouse's), and showed him under water. After three minutes he showed signs of distress, and bubbles of air began to escape from his mouth, he struggling at the same time to rise to the surface; five minutes, still struggling slightly; ten minutes, we drew him up quite dead. Possibly the great exertions he made to escape exhausted him sooner than if he had been free, but I don't think it could have made a difference of more than a couple of minutes. You will probably wonder how we could select a beaver to suit our purpose. Let me explain how they are caughther in the winter under favorable circumstances. First of all the hake must not be too large, as the work is rather tedious. From five to six hundred yards long is considered quite large enough for two men to work over in one day. The tools required are an axe, a shovel and an ice-chisel, the latter being nine or ten inches long, three-langed top to insert a handle six feet long. Armed with this, a hole is then made in the side of the lodge near the

one day. The tools required are an axe, a shovel and an ioe-chised, the latter being nine or ten inches long, three-quarter inches wide and half an inch thick, with funnel-shaped top to insert a handle six feet long. Armed with this, a hole is then made in the side of the lodge near the surface of the ice, which is the thinnest part. At the first stroke the beavers evacuate the premises and make a rush for their holes, which are situated at intervals all round the lake, but generally where the banks rise abruphy. If the lodge is a large one, there is about fifteen or twenty of these holes. What we call a large lodge here contains eight or ten beavers—two old ones, four two years old and four young; they very rarely exceed that number. The outlets of the lodge being barred with a couple of stakes to prevent them from coming there to breathe, a search is then made for their place of refuge. This is done with the ice-chisel in the following manner: Standing about three feet from the shore the ice is struct, with the point of the chisel; this is repeated at every step in going round the lake. On nearing a hole the ice entire is hollow sound on account of its being much thinner, owing to the going in and out of the beavers. Its exact location being found, the ice is out away and the ontrance barred with stakes. This operation is performed till all the holes are stopped. A small saphing four of five feet long, with a slight bend in it, is then cut; this is inserted through the water and into the under-ground hole; if the beaver is there its presence is soon detected with the point of the stick. The ice-chisel is brought into use once more; a couple of strokes are given over the beaver's head on the bottom near the stakes. The hand is then inserted in the water; its hind paw felt and taken hold of; then drawing it half out of the water, a blow with the axe is given out in the same place. The above performance is renewed at each hole, till there is no more.

Some Indians have dogs trained for this kind of hunt; it save

Prairie Chickens Drinking.—New Bedford, Neb., Feb. 8th.—Editor Forest and Stream:—Having frequently heard it stated that "prairie chickens" drink nothing but dew, collected from grass and leaves, I have thought the following item might be of interest to some of your many readers.

Last November, while waiting for goese on one of the numerous sand-bars in the Platte River, a flock of pinnated grouse came from the prairie and lit near the water; after looking around for a few minutes they walked in where it was a few inches deep and commenced drinking. They stayed on the flat about half an hour, taking frequent drinks, and at times were within thirty feet of me. Have frequently seen large flocks of them drinking just before sunrise, but never before had been able to get nearer than thirty yards. N. W.

We should be glad to know whether these "prairie chickens" were pinnated or sharp tail grouse.

chickens" were pinnated or sharp tail grouse.

CAT AND RATTLESNAKE,-The following blood curdling tale is told by the Americus, Ga., Republican :-

tale is told by the Americus, Ga., Republican:

About three weeks ago, during the beautiful sunny weather we have had which induced the trees to bud and bloom, I was walking in my garden one morning, thinking about preparing for an early start for spring vegetables, when I saw a large rattlesnake sunning. My first impulse was to go to the house, get a gun, and kill it. But looking around, I saw a very large house cat cautiously creeping upon the reptile. Anticipating a fight, and equally desirous of getting rid of the cat, which killed chickens. It concluded to witness his attack upon the make. The cat crawled upon its stomach, pulling along on its feet, whisking its tail from side to side, and every now and then stretching its neck to view the snake. When about eight or ten feet off the snake suddenly coiled tongue out rapidly. The cat commenced a ranid field.

around the snake, so fast in fact that the eye could hardly keep up with it. At last it got near enough and made a dart at its enemy, but through providential reason went high above the snake, which also struck at the cat, thus breaking its coil. The cat went too far and by the time it turned to face its foe, the reptile was again coiled and ready for the attack. The same method was adopted und carried on for four or five times, occupying at least half an hour. The cat wished to catch the snake, but seemed aware that if it missed the neck it would be certain death. At the sixth assault they met and instantly the snake was wrapped in several folds around the body of the cat, which used its sharp claws with deadly effect. The cat had been bitten on the head and neck several times, and both continued to light. The snake was torn nearly to shreads, but did not unloose its coil around its victim. The poison was swift and deadly, but before the cat died it caught the snake's head in its mouth and crushed it, and fighting they died, the snake cawrapping the cat in its fighting they died, the snake enwrapping the cat in its coils. The snake measured four feet eight inches, and had thirteen rattles.

How to Handle Skunks.—Ferrisburgh, VI.—Editor Forest and Stream:—I do not know what skunks can do when lifted by the tail, and do not care to experiment with the animals for the good of science and natural history; but I remember when I was a youngster a skunk got into our cellar and my big brother having heard of this as a safe way of handling them, tried it successfully on this one. With a pair of tongs he raised him carefully by the tail, carried him out doors, gave the holding of tongs and skunk over to me, proud as a drum major to have so important a duty assigned me, and then blew the unwelcome visitor's brains out with a heavy charge of shot, with no unpleasant results to any but the skunk. As I said before, I do not know what he could have done, but should suppose he would have done his worst, as to be so transported cannot be very soothing to even the trangul soul of a skunk.

AWAIISOOSE.

Collision Between A Bijebird and a Locomotive,—Stanley, Morris Co., N. J., March 6th.—Editor Forest and Stream:—To-day, as I was walking along the track of the D. L. & W. R. R., I noticed a bluebird perched on the telegraph wire. The afternoon mail train came thundering down the track, around the curve. When it was of the D. L. & W. R. R., I nouten a most of the D. L. & W. R. R., I nouten a most of the degraph wire. The afternoon mail train came thundering down the track, around the curve. When it was but a few yards away, the bluebird started to cross the track; but either through fright or by miscalculation, if struck the boiler of the engine and fell, stunned, to the ground. I picked it up; it slowly revived and flew away. Large flocks of blackbirds, robins and ducks have made their appearance, and I anticipate good sport with the latter during the next six weeks along the Passaic River and in the "Great Swamp."

Hish Culture.

THE MOVEMENTS OF SALMON IN THE SEA.

HEN the results of trustworthy observations are HEN the results of trustworthy observations are interpreted with caution, certain conclusions present themselves respecting the movements of saltons in the Newfoundland and Labrador seas, which may be accepted as a first approximation to correct views. The subject is important, because it becomes a guide to the movements of other species of fish from which information of practical value may be gathered.

As the result of limited personal observations, some inquiry and a good deal of careful searching into records, I have arrived at the following first general conclusions as to the habits of salmon in the sea, on the coasts of Newfoundland and the Atlantic Labrador:—

1.—Salmon in the sea there, move and feed in separate schools throughout the greater portion of the year, and in different localities they are taken in nets on the coasts from the early part of May to Christmas. Alternating schools are always probably on the coast.

2.—The schools are distinct in respect of age and say, recepting apart in so far that adult salmon, or sulmon, say, keeping apart in so far that adult salmon, or sulmon, say,

2.—The schools are distinct in respect of age and sex, keeping apart in so far that adult salmon, or salmon, say, of the fourth year from the hatching of the egg, school and feet together; salmon of the third year, or grilse, feed and school together; salmon of the second year, or smolts, do likewise. In these particulars they resemble the cod and the herring, which feed and school and have separate winter haunts according to age.
3.—The adult males do not school and feed with the adult fomales in the sea, nor do the males of the third year (grilse) school with the founds of the third year in the sea.
4.—All the schools have a definite sea area as their

4.—All the schools have a definite sea area as their

the sea.

4.—All the schools have a definite sea area as their home, which may be represented by the area immediately opposite to the rivers in which they were born, expanding seawards, so that the area occupied by different schools overlap one another. They do not confine their risis to fresh water to any particular river, but visit for short perioda rivers adjacent to the one in which they were born. Adults always endeavor to reach the river in which they first saw the light, for spawning purposes.

5.—All schools approach the coast by well-defined fishpaths, and almost always in the same direction, being against prevailing fittal currents. In this they agree with the general movements of the cod and the herring. Should prevailing winds temporarily change the direction of the tidal currents, the fish accommodate themselves to the change. Should an unusual abundance of ice be pressed upon the coast in the spring, the lish remain outside of the ice or endeavor to skirt it. They refuse to pass under melting salt-water ice, probably on account of the cold heavy brines descending from the melting ice. They do not appear to shun fixed or floating ice in the winter, which is not melting. The cof danting ice in the winter, which is not melting. The cof and the herring are also influenced by the same conditions.

6.—Approaching the coast in the spring they feed raveously upon caplin, sand-cels and young herring, which are also nearing the shores at the same period. School follows school in regular succession, but the old males are first, the old femaies second. They are followed at an interval of a fortnight or three weeks by the male griles; respectiable.

The winter homes of the great body of salmon are on

The winter homes of the great body of salmon are on the seaward slopes of the sea-bottom outside of the 100-fathom line of soundings or thereabouts, and generally it

would seem just out of the reach of the harp-seals.

would seem just out of the reach of the harp-seals. There are probably two million harp-seals wintering on the coast of Newfoundland, but although these active marauders frequently bring cod and "turbot," the Greenland halibut, and flat-fish generally, to the ice-floes and ice-pans, I have not heard of a single salmon being brought up by seals. Nevertheless, since large salmon are caught in deep water off the Island of Fogo up to Christmas, schools of this fish are on the coast, in deep water, at that period, and they have been taken there in seal nets. In such deep bays as Trinity, where there are from 120 to 320 fathons of water, salmon are into tuffer (on 120 to 320 fathons of water, salmon are not tuffer (on 120 to 320 fathons of water, salmon are not tuffer (on 120 to 320 fathons of water, salmon are not tuffer (on 120 to 320 fathons of water, salmon are not tuffer (on 120 to 320 fathons of water, salmon are not unference of the control of the salmon of the salmon and the salmon of the general switch of the salmon strike the whole of this is necessary to refer to a map of Newfoundland and Labrador. The distance from Burgeo Islands (longitude 57 deg. 40 min.) on the south coast of the island to Ukkasiksalik (latitude 55 deg.) on the northern Labrador is about 1,500 miles. The salmon strike the whole of this long extent of coast line between May 16th and July 16th, a period of sixty days. The general absence of ico on the Labrador coast diminishes this period to six weeks. This is what we see, but from it we must not infer that the spring and the salmon shore ward at that period.

The presence or the incoming of food at the spring season of the year brings the great body of salmon shoreward at that period.

They stream in from deep water to shallows near the shore to feed on the forms of life which are born there, and the forms of life which are born there,

ward at that period.

They stream in from deep water to shallows near the shore to feed on the forms of life which are born there, or which gather for a similar purpose, or which are drifted shoreward by the never-ceasing action of tidal currents, for these play a very important part in the distribution and maintenance of marine life on all the coasts of north-

A vast army of fish bearing the colors of Salmo salar A vast army of fish bearing the coins 6. Suinos such advance from the continental submarine slopes in successive battalions toward the coasts through 9 degs. of latitude as far as Fern Bay, some twenty miles beyond Ukkasiksalik, for there the salmon may be said to cease. They do not appear again until Ungava Bay is reached, inside of Hudson Strails.

SEX OF THE SCHOOLS.

Newfoundland waters offer no exception to the rule that the males come first to the const in the general spring movement. It has long been well known as a natural law, with rare exceptions, that the males of most species, but it of fish, flesh or fowl, are the first to gather together with the increasing warmth and light of spring. Darwin pointed out this fact with regard to the salmon many years since, * . He also mentioned the great loss of males every since.* He also mentioned the great loss of males every year from fighting and tearing one another on the spawning beds. He quotes numbers to show that among salmon the males arrive first at the mouths of rivers, the females following after. Thus in 1865 Mr. Buist took sixty males out of seventy fish caught in the first runs for obtaining the ova. In 1867 Mr. Buist at the outset took ten males to one female. Mr. F. Buckland records similar disproportions between males and females in the first runs of trout. Mr. Wilmot goes so far as to speak of "the indisputable fact of grilse taken in rivers being always males." Mr. W. H. Hudson, of the Connecticut State Fishery Commission, mentions that all the salmon first caught and opened in the Connecticut River proved to be males.

SIZE OF THE FISH IN THE DIFFERENT SCHOOLS.

SIZE OF THE FISH IN THE DIFFERENT SCHOOLS.

to be males.

SIZE OF THE FISH IN THE DIFFERENT SCHOOLS.

The following enumeration of the size of the mesh of nets used in different districts refers to different periods of time, going back several years. It is introduced to show how experience dictated the mesh best adapted to take the largest quantity of fish, regardless of the consequences to the fishery of the future. Acting upon the ascertaimed fact that the schools first approaching the shore consisted of the largest fish, subsequently followed with great regularity by schools of a much smaller size, the mesh was varied to suit each school. It may be premised that nets are generally set at right angles to the shore and chiefly at headlands. They are set singly or in fleets, with a pound or trap at the extremity according to the strength of the tidal currents.

East Const—1. Conception and Trinity Bays.—First run May 20th to July 5th; mesh 6 inches. Second run July 5th to Aug. 10th; mesh 5½ to 5 inches.

2. West part of Notre Dame Bay—First run June 6th to 5th; mesh 6 inches. Second run July 1st to 10th; mesh 5½ inches.

3. Notre Dame Bay (southern part).—First run June 15th; consens 6 inches. Second run July 1st to 10th; mesh 5½ to 5 inches.

4. Cape St. Jun to Quirpon—June 20th to Aug. 10th; mesh 6½ to 5 inches.

5. Twillingate and Fogo Islands.—Vory large salmon taken in deep water at the headlands in November and December up to Christmas; mesh 8 to 6 inches.

6. Hamilton Intel Clabrador, July 1st to Aug. 5th; mesh, 6½ to 6 inches.

7. Northern Labrador (North of Cape Harrison), July

December up to Christmas; mesh 8 to 6½ inches.

6. Hamilton Inlet (Labrador), July 1st to Aug. 5th;
mesh, 6½ to 6 inches.

7. Northern Labrador (North of Cape Harrison), July
15th to Aug. 15th; mesh, 6½ to 5½ inches.

1. will be observed that there is only one run of salmon
specified for sea or headland lisheries north of Cape St.
John, Newfoundland. The grilse and sameller-sized
salmon are taken in the vivers as far as Quirpon, but
rarely in the sea, as is the case further to the south. The
relative sizes of the salmon taken at the headlands and
at the mouths of rivers and in rivers, may be gathered
from the fact that between Cape John and Quirpon 35 to
40 salmon are required for a terce of 300 lbs., but of the
river salmon it takes from 100 to 120 to a tierce. Mr.
Knight's tates that he has taken salmon in November,
and counted the ova. A salmon of 18 lbs. gave 6,600
eggs of the size of partridge shot. This salmon would
probably have been in condition to spawn in April.

The capture of salmon about islands destitute of rivers
is worthy of note. Such islands are:

1. On the south coast—the Burgeo Islands, Pass
Islands.

2. On the east coast—Fago Island, Twillingato Island,
the Horse and Barbe Islands.

3. On the Labrador—Grady Island (latitude 53 deg.

The unwements of ordise and small-sized salmon on the

45 min). The movements of grilse and small-sized salmon on the

Atlantic Labrador coast is an interesting question, which may be noticed subsequently.

DIRECTION OF MOVEMENTS IN THE SEA.

In describing local movements in The ELA.

In describing local movements Is shall commence with the south coast of Newfoundland, then turn to the east Atlantic coast of the island, and progress northwesterly toward the Fiord, at Okpact, or Forn Bay, on the Northern Labrador. Here Sathno salar ceases to put in an appearance, and is replaced by Sathno immaculatus, or the true sca-trout, which has its home in these northern waters, and where it attains a size and beauty I have nover seen approached in the Gulf of St. Lawrence, District of Fortune Bay (south coast).—The rule in

never seen approached in the Gulf of St. Lawrence.

District of Fortune Bay (south coast).—The rule in this district is that salmon are always taken moving toward the west, or, as it were, out of the bay. Prevailing winds affecting the tidal currents sometimes change the direction the fish are pursuing.

Placentia Bay (south coast).—The large fish are always taken moving to the southwest, or out of the bay. The large salmon here are now never taken but off headlands or situations confronting the open sea.

Conception Bay, Trinity Bay.—On the northern as well as on the southern side of these bays it is alleged that salmon are always, as a rule, taken as if coming from the west, or, as in the other bays already mentioned, as if going out of the bay.

from the west, or, as in the other bays already mentioned, as if going out of the bay.

French Shore (so-called), Cape John to Quirpon Bay.—Salmon are generally caught on this stretch of coast as if coming from the south, or out of the bays. Generally it may be said that the salmon taken in nets on exposed portions of the coast are almost always caught as if moving out of the bays. Of course, this rule does not hold good at the extremities of the deep bays, for there the tidal movements are guided by the configuration of the land.

studying these and similar observations, which show remarkable regularity in the movements of the salmon, remarkable regularity in the movements of the salmon, we must give attention to three leading features: First, to the winter homes of the salmon; see and, to the supposed habit of biennial spawning; third, to the relation which most of the movements of all kinds of lish bear to tidal currents.

The supposed labit of biennial spawning gives us two

The supposed labit of biomial spawning gives us two classes to deal with: those which come on the coasts to seek spawning rivers, and those which follow their food, and occasionally seek fresh water for sanitary purposes, such as freeing themselves from external and internal parasites. It is unnecessary for the purposes of the present outline sketch to enter into any discussion respecting the biennial spawning habit. Butit is advisable to glance at the winter homes of the salmon and the life of the sea in deep waters where winter lishing has long been carried on, and by its results has enabled us to become indirectly familiar with the teening submarine valleys and floor of the ocean, a thousand feet below the surface, on the south coast of the island of Newfoundland.

WINTER HOMES OF FISH.

The south coast of Newfoundland descends like a The souli coast of Nowformaland descends like a sloping wall, or in abrupt terraces, in many places to depths of 1,200 feet and even 1,600 feet. The sea there, close to the shore line, furnishes us with a wonderful spectacle of fish life. Every winter, including October to April, upward of 30,000,000 to 50,000,000 pounds weight of codfish are lifted from a depth ranging from 600 to 1,200 feet and brought to the surface. If we transvent weight of complex in importation to the flexe fixed from the first consideration of the first consideration of the first consideration of the first consideration of the flexe fixed from the first consideration of the flexe fixed from the first consideration of the flexe fixed from the flexe fixed for the flexe fixed for the flexe fixed for the flexe fixed for the flexe fixed for the flexe fixed fixed for the flexe fixed fixed for the flexe fixed fixed for the flexe fixed fi 600 to 1,200 feet and brought to the surface. If we transplant ourselves in imagination to the floor of the occan, one, two and three miles from the bleak wall of rocks which form the occan front of the south coast, we may see upreared before us a jagged or terraced slope, with many deep-cut indents or valleys, rising to an altitude of 1,600 to 2,000 feet, and of this huge escarpment five-sixths lie below the surface of the sea. These serrated slopes, and the sea floor from which they rise, are the winter homes of innumerable fish. The large cod are at the bottom with vast schools of young herring and caplin, for these are sometimes found in their stomachs when caught. The breeding herring occupy the higher slopes and lie closer inshore. They are found in a zone which extends from 60 fathoms or 300 feet up to the surface at the edge of, and under, the ice which covers the indents or fiords. The adult or full-grown almon I conjecture are also roving about the deeper slopes and hortom, for they rise with and follow the caplin to higher levels in their stomachs. But they soon become satiated with such abundant food, and the caplin, as they near the surface and approach the shores in June, are followed by the second run of the smaller or younger salmon which are called by the fishermen "the caplin school," because they approach the shores simultaneously with the caplin. Some details as to the whereabouts of the profound depths close to the shore line to which I have referred may be acceptible, for in relation to the fish life they sustain they take up to acceptible, for in relation to the fish life they sustain they take up to acceptible, for in relation to the fish life they sustain they take up to acceptible, for in relation to the fish life they sustain they take up to acceptible, for in relation to the fish life they sustain they take up to acceptible, for in relation to the fish life they sustain they take up to acceptible, for in relation to the fish life they sustain they take up to acceptible the sustain th plant ourselves in imagination to the floor of the ocean

depths close to the shore line to which I have reterred may be acceptible, for in relation to the lish life they sus-tain they have no parallel in any part of the cold water world on this side of the Atlantic. They have their rep-resentatives off other coast lines in the form of abrupt sandy slopes, but those are from 50 to 100 miles from

land.

Baie D'espoir leads out of Hermitage Bay and the entrance to it is 2\cdot\(^4\) miles broad, with a dopth exceeding 270 fathons or 1.630 feet. Close to the coast on either side there is more than 100 fathoms of water. It is a partly submerged ford, and has many kindred records of former ice action on the bold front of the south cost. In Belle Bay, which lies within the well-known Fortune Bay, 1,000 feet will not touch the bottom in many places, and but, as it were, a few rods from land. Towards the head of Placentia Bay we find on the Admiralty charts 146 fathoms marked within two miles of the land, and all along this coast three or four miles out there is profoundly deep water. A mile and a balf from Cape La Hune it takes a line 650 feet long to reach the bottom. Near to the Burgeo Islands 1,000 feet will not suffice. In La Poile Bay we may fish with a line 700 feet long, but near Sagona Island we must take 1,000 feet and more to touch the bottom with our bait. Along this southern coast of Newfoundland, fishing operations are conducted in the winter months, from October to April, and in order to form some conception of their magnitude in times past, we may turn to an official report published some years ago by the Newfoundland Government, From this report we glean that the actual catchers of codish botween Cape Ray and Point May then numbered about 2,000 souls. During the winter they caught 146, Baie D'espoir leads out of Hermitage Bay and the en-

000 quintals of fish. This quantity, at 112 pounds to the quintal, would represent 16,240,000 pounds of cured fish, or more than 50,000,000 of fresh codfish likted from the sca by 2,000 men during the winter months, fishing with lines and from boats. The entire fleet of Gloucester, Mass., did not bring into port a greater weight of all kinds of fish during the whole of 1879. In addition to the codfish there are the winter herring, the breeding fish, lying close inshore, of which 50,000 barrels were caught

it is from these profound and populous depths, where cod, young herring, caplin, and probably lunuer range, with an innunerable multitude of sub-arctic fishes, and an infinite host of the lower forms of life, all fed directly or indirectly by the unfailing Labrador current, that the or indirectly by the unfailing Labrador current, that the full-grown silver-sided salmon rises in the spring to pursue his food along the islands, headlands, promontories and wall-like csearpments of the south coast of Newfoundland. On the east Atlantic coast of the Island and the Labrador coast these features are reproduced in various localities on a less grand scale, and in many parts the steep escarpments are replaced by gentle slopes which lead, within from five to fifty miles from the land, to profound depths. That the fish life in these depths on the castern coast is vastly abundant during the winter season we know from the fact that from time immemorial the seas there have supported, every winter, such a surprising we know from the fact that from time immemorial the seas there have supported, every winter, such a surprising number of harp-seals that an annual average slaughter for half a century of upward of 300,000 of these animals has not produced a very sensible impression on their numbers. although it has changed, by experience of danger, their habit of trimming the shores of the bays. When we consider that the harp-scal feeds largely on fish during the winter, although in summer it lives chiefly on crustaceans (shrimps, etc.), we can form an idea of the vast quantities of fish food these animals must consume during the five months they are on the coasts. They bring numberless cod and flatfish onto the ice, and it would be an interesting fact to know the general size of the fish they catch, so that a positive proof might be obtained that the smaller sized cod winter in a shallower zone than the average full-grown fish of forty or fifty pounds in weight.

We are now in a position to consider the movements of salmon in the sea as far as regards the large schools of

We are now in a position to consider the movements of salmon in the sea as far as regards the largo schools of adult fish which are first taken at the headlands during the enrilest visible runs in the spring. The schools come instore from deep water with and against the rising tide, and begin to feed without any special regard for river estuaries or fresh water, for they strike and coast about cutains of resil water, for they strike and coast about small islands and bold promontories stretching far into the ocean and destitute of rivers, just as frequently as they visit the headlands which guard the estuaries. They pursue a course in shallow water parallel to the shore line and against the tide; they go out to see again just

CHART SHOWING MOVEMENTS OF FEEDING FISH.

as the tide begins to turn, and when in deep water they turn round and swim against the ebb tide. At the turn of the ebb they approach the shore again and pursue their course as before, against the flood, going out to sea at the turn. Their movements, as will presently be shown, are in the form of a series of loops or ellipses along the coast, the straight line connecting these loops being in deep water. Let us take, by way of illustration, the novement of the first schools of salmon in Trinity Bay, on the east coast. Here they are taken in netsen both the deep water. Let us take, by way of illustration the movement of the first schools of salmon in Trinity Bay, on the east coast. Here they are taken in nets on both the north and south sides of the lay, as if going out toward the open sea. They are, in fact, caught moving eastward against the rising tide. At the turn of the tide they pass into deep water, and, veering round, swim against the ebb until the tide begins to rise again; they then approach the shore a second time, but their journey in deep water has brought them further up the bay, and as they coast against the flood, following the indentations of the coast line, they do not cover nearly so much ground in a straight line as during their direct course in deep water against the ebb. By repeating this movement, and by passing in deep water through double or more of the distance they lose on the coast, they make their way to the head of the bay, which in Trinity is reached about ten days after they strike the headlands at the entrance. In the case of eddy-flood tides on the coast the movements are reversed, as well as when winds alter the direction of the flood. If these movements of the feeding tish be plotted they will form a continuous line parallel to the coast, with loops in it at irregular intervals. The loops represent the movements of the fish toward and on the coust, the straight parts in deep water the progress up the bay or along a coast ine. I am persuaded that many fish, not excluding the mackerel and schools of young cod, approach the coast and feed in a similar manner, coming in with the flood and going out to sea with the ebb tide.

The first schools of salmon whose movements in the sea have been described are composed of the largest adult

coming in with the flood and going out to sea with the ebb tide.

The first schools of salmon whose movements in the sea have been described are composed of the largest adult fish, but whether they are all breeding fish or all fish of an off-spawning year, or mixed schools of old adults, can only be determined by further inquiry; but I think that in general it will be found that they include both classes, which separate when they reach the mouths of rivers they desire to ascend. The next schools, which follow a fortnight or three weeks later, are composed of young adult schmon and grilse. These appear to pursue the same method of approaching the coast as the large fish, and they make for the estuaries and mouths of rivers, ascending them when not barred by nets, as is unfortunately the case to a large extent in Newfoundland. Before attempting further to describe the movements of salmon in the sea it will be necessary to glance at the spawning process and the hatching of the egg, which may well serve for a future communication.

Windsor, Nova Scotia, Feb. 17th, 1880,

Sea and River Hishing.

FISH IN SEASON IN MARCH.

Pompano, Trachinotus carulinus. Grouper, Epinepholpus nigritus.

GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County: means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

THE OPENING OF THE TROUT SEASON.—The long-looked for 1st of April is now close at hand. On that day begins the spring war on the Salmo fontinalis in this State. Anglers, who have been looking fondly at their tackle during the long close season, are now scrutinizing carefully their tools and getting ready for their cherished sport. We have usually, at this season, called the attention of anglers to some facts in regard to the preparation of their tackle, arrangement of casts, etc., and we now follow our custom; not that we would dictate to old anglers (who, sometimes, like the heathen, are "a law unto themselves"), but merely with the desire to give the results of our experience for the benefit "of whom it may concern,"

First. The hook should be the "sproat bend," and it should be the very best make of this bend. Be sure your hooks are the very best that can be made. It is the poorest economy to save money here.

Second. The size of the hook should be about two numbers larger than those used later in the season. trout have not, in localities where the law is enforced, been fished over for some seven months; consequently the prime necessity of small hooks is not present. course every one knows that one should use as large a fly for trout as he can without fear of scaring the fish. We do not give the proper numbers of sproats to use, because what would be small for some localities would be large for others. Let us merely say, use two sizes larger than you found most successful at the close of last season.

Third. What flies should be used? We think that, especially at this season of the year, the little jungle cock shoulders" are a great addition to almost every fly, and a small spray of the crest of the golden pheasant can be mixed with the tail of most flies to great advantage. The following flies (with above additions, if possible) are the best for the opening day: (1) Grizzly King; (2) Imbrie; (3) Light Corduroy; (4) Professor; (5) Abbey; (6) March Brown; (7) Spider; (8) Cooper; (9) Brown Palmer, red body; (10) Grey Palmer, green body; (11) Black Palmer, yellow body; (12) Scarlet Ibis. Using these flies in making your casts, beginning at the end of the cast nearest your line, we would advise as follows :-

FOR AN OVER-CAST DAY. Cast No. 1, 12, 1, 2. Cast No. 2, 10, 4, 8. Cast No. 3, 9, 3, 5.

FOR A BRIGHT DAY. Cast No. 1, 6, 7, 11. Cast No. 2, 2, 3, 7. Cast No. 3, 5, 11, 4.

The fourth suggestion is this: Be sure to remember that, if the air is very much colder than the water, and particularly if the surface of the water is broken by a cold wind, the trout are much more apt to take the fly just below the surface than on the surface.

We have said nothing about bait fishing. On this point we would only say : Eels and flounders are in season, and the bait fisherman should take a day in Coney Island Creek, or anywhere else than in trout waters.

We hope to receive accounts of the triumphs and reverses of our readers.

Who Will Tell Him?-Our correspondent, "Salmon Roe," is unsatisfied with our view of the character of an alleged John A. Grindle, and insists in imputing to that gentleman the unsavory fame of the dogfish, which is supposed to bear his name. Doubtless, as he avers, "Salmon Roe" is sincere in his quest of information on this point, but he is certainly guilty of a grave offense in his statement, "It is reasonably certain that he was a lawyer," and that he must have lived in Mississippi, Illinois, or possibly in Indiana. Every lawyer (and "Salmon Roe" himself is one) owes it to his profession to prove either that Mr. Grindle was, as Marc Antony said, an. honorable man, or else that he did not belong to the bar And every patriotic sentiment should impel the citizens of Mississippi, Indiana and Illinois to a like consideration of the fair fame of their respective States. Now who will tell us of Mr. John A. Grindle, when and where he

"Salmon Roe" writes from Jacksonport, Arkansas, March 6th :-

March 6th:—
In a recent editorial article in your paper you make the mistake of supposing that I inquire who John A. Grindle was, by way of invective against the lish bearing his name. Nothing could be more foreign to my intention. I was in search of information in good faith. Besides, such a feeble way of handling "cuss words" is not an Arkansas failing. Arkansas failing.

I will give you my conjectures as to Mr. Grindle, and

would thank you to ask the question, who he was, to your numerous correspondents. It is reasonably certain that he was a lawyer, and perhaps a politician also. He must have been a greedy, grasping, unconscionable fellow, and must have lived in Mississippi, or the part of Illinois known as Egypt—though there is a part of Indiana where such a man night have lived. I can find no one in this State who knows anything about him. I am almost certain the Amia calva was not named after him by way of compliment. Please help me find out who he was. I have seen the full name, John A. Grindle, applied to the fish in print.

the fish in print.

A CAMP BED.—Atlantic City, March 7th.—Seeing in the last FOREST AND STREAM a piece on camp beds I thought I would tell you of mine, which I have used for six weeks at a time and found very comfortable. It is a double piece of ticking, 7th. long by 4ft. wide. It has a place for a pole at each side and also at each end. These poles are laid in forked sticks, in the manner you have already described. We fill up under the ticking with hemlock or Florida moss as the case may be. To keep this from scattering all over the tent we make sides of board, or if we are without such a useful article we lay poles one on top of the other till they are level with the ticking at the top and bottom, as well as at the sides, so that no hemlock can get out. When we want to make our bed soft we run a stick under the ticking and stir it around, which I am sure is quite a novel way of making beds, but the result is such that I have often wished our hotel chambermaids would copy. I never put hemlock boughs as a top layer, but strip them, thus making a soft and comfortable bed, the beauty of which is you have nothing to carry except a piece of ticking, which folds up in a very small space.

Fort Wayme, Ind., March, 15th.—In your issue of March

Fort Weyne, Ind. March 15th.—In your issue of March 4th "H. L.," of Warsaw, asks for a comfortable camp cot. Allow me to suggest to him and others that the best thing for the purpose is a cork mattress, 6tf. 2in. by 9tf. 6in. They are light; can be rolled up into a very neat package; can be used in any place; are much more convenient and not as heavy as camp cots; cost 60 per cent. less; are warmer, etc. The objection I have to the cots is, the feet sink into the ground, making the cot uneven and breaking it. I have used the bed-tick for years, but have been many a time without anything to fill it. Hammocks cannot be put up in a small tent, and are unhandy in a large one. Willis D, Maier.

are unhandy in a large one.

WILLS D. MAIER.

A FISHING TRIP THROUGH CANADA WILDS.—Quebec, March 11/h.—I can give you yet another very pleasant trip that can be made at small expense from Toronto and will not take more than say two weeks. Take the Toronto and Nepissing Railroad to Coboconk at the head of Balsam Lake. Here take guides, of whom plenty are easily found in the village at a cost of \$\frac{1}{2}\$ per day, or \$\frac{1}{2}\$. To \$\frac{1}{2}\$ fc cances or skiffs are to be supplied. Then the choice of \$\frac{1}{2}\$ wo routes is open, and they are both good. Go north to Mud-turtle Lake, and then Gull River to Gull Lake. Again follow up Gull River after leaving the lake till Lake Boshkung is reached. Here is fine fishing and shooting in fall. A portage of about three miles brings one into Lake Kashaganigamoz, a very large lake with good fishing. If another route is desired go south from Coboconk, through Balsam Lake, then a short river, and so into Cameron's Lake. Another short river trip brings us into Sturgeon Lake; then through Pigeon and Buckhorn lakes into Deer and Salmon Trou Lakes. In all those lakes the fishing is good; trout, black bass, maskalonge and lungs are plentiful, with good duck and partridge shooting in fall. Deer shooting is also good about the upper lakes after leaving Salmon Trou Lake. Good by and the proper lakes after leaving Salmon Trou Lake. Hawai village, on Rice Lake. Good bass and maskalonge fishing; duck shooting in fall. Then by rail to Cobourg on Grand Trunk, and so to Toronto and home. When in Boshkung Lake it is but a short distance, with comparatively few portages, to Trading Lake. Then down the South Branch of Muskoka River and through Muskoka Lake to Gravenhurst, where the Northern Railway is taken for Toronto.

NEW BRUNSWICK SALMON RIVERS.

NEW BRUNSWICK SALMON RIVERS

FINE three rivers, Miramichi, Nepisseguit and Restigouche, are TME three rivers, Miramichi, Nepisseguis and Restigouche, are all reached by the Intercolonial Railway, which runs from St. John, N. B., to Riviere du Loup on the St. Lawrence, If the Restigouche is the objective point I would recommend going via St. John and returning rin Quobec to Boston, as the distance from the Restigouche to Boston is the same either way. Route from Boston to St. John by cars: Boston to Portland, 108 miles; Portland to Bangor, 130 miles; Bangor to St. John, 205 miles. One through train daily from Boston to St. John, via Eastern Railroad at 7 P.M., reaches Portland at 11.30 P.M. and Bangor next morning at 6.10 A.M.; connects there with European and N. A. Railroad, leaving at 7.20 A.M., thus giving one hour and ten minutes for breakfast. Penobsect Exchange Hotel near the station; first-class. Arriving at St. John same day, 6.45 P.M., making 49 milles and 24 hours' time from Boston; fare. Beston to St. John, \$10. Partless preferring can take one of the steamers (International Steamsbip Co.), which leave twice a week in spring and fall and three times in the summer at 8.A.M. from end of Commercial Honai Steamson Co., which read the A.M. from end of Commercial and three times in the summer at 8.A.M. from end of Commercial Wharf, Boston; farc, \$5.50, exclusive of state-rooms and meals. Train leaves \$1.40m, intereclonial Railroad (Korthern Division), 8.A.M., arriving at Miramichi, town of Newcastle, 167 miles,

Train leaves St. John, intercomma manical contents Dislond, S.A.M., arriving at Miramichi, town of Newcastle, 107 miles, about 5 r.M. Hotel, Waverley; situate about quarter of a mile from Miramichi River; but no fishing here. Take a team seventeen miles up river to Indiantown, and go to Frank Jardin's hotel, a small affair, but best there is; terms, \$1.50 per day. Fishing here good in the season, from 10th to 20th of June; salmon only, ranging in weight from eight to twenty pounds. Guides not indispensable. Can fish from the shore or from canoes. From Miramichi to Bathurst 1st 4 miles; Bay View Hotel; no fishing in the immediate vicinity. The Nepiseguit, famous for its salmon, emprise here, but it is necessary to take a team up the river; good fishing nine miles up at Rough Waters, and at points alloug up fiver to Grand Falls, twenty miles. Fishing may be done from the lamks or in canoes. Guides plenty for \$1 per day. Seenery enchanting as you go up the river. Season does not causally commence till June 10th or later, and continues through the summer. Permits necessary; charpe usually 51 per day per od. Settlements along the banks near Rough Waters. Grand fishing pool at the falls. Camp necessary. Salmon range six to twenty-five pounds.

Nepiseguit to Metapedia station, junction of the Metaped's and

Restigouche rivers, is 76 miles. Hotel Fraser, kept by Daniel Fraser—an excellent house, with accommodations for fifty or seventy-drog quests. Mr.F., an intelligent Scotchman, will do everything to make his guests comfortable; terms, \$2 per day. Always gety our guides through him, and he will see you are not imposed upon. He leases six miles of the river, and grants per-

inis at \$1 per day per man.

The Restigouche is one of the most famous rivers in New Brunswick, and the salmonfrun very large, ranging from eight to fifty pounds; thirty, thirty-five and forty pounds are not uncomcatches. The season is about ten days earlier here than a mon cutches. The season is about ten days earlier acro chan as the Miramichior Nepiseguit, and usually opens from 5th to 10th of June, and keeps up through the summer. The largest fish are the first that run up. Splendid pool within a stone's throw of the hotel. Distance from here to Riviere du Loup, 176 miles; from there to Quebec, 125 miles. Whole distance from Boston to St.

there to Quebec, 125 miles. Whole distance from Hoston to St. John, 460 miles; St. John to Quebec, 588 miles; Quebec to Boston, 460 miles. Total, 1,445 miles.

Round trip tickets from Boston to Restigouche via St. John, and return via Quebec, can be procured for about \$31.

Expenses of fishing at Restigouche per day: Board, \$2; board of two guides, \$2.50; permit, \$1; cance, 50 cents; two guides per day, \$1.50. Total expenses per day, \$6.50. As the water is very "quick," two guides are midspensable per man. Estimated necessary expenses for two weeks' trip from Boston to Restigouche, \$150. Plenty of sea trun, six miles below Metanedia, running Plenty of sca trout six miles below Metapedia, running

\$150. Plenty of sea tront six more some from one-half to five pounds in weight.

For particulars address Daniel Friscr, Metapedia Station, N. B.; Waverley Hotel, New Castle, N. B.; J. H. Wilbur, Bay View Hotel, Waverley Hotel, New Castle, N. B.; J. H. Wilbur, Bay View Hotel, Waverley H. GEO. A. PAY.

West Meriden, Conn., March 9th.

HOW WE FOUND AND FISHED THE SOUTH FORK.

O^N more than one occasion last summer did we have our curiosity aroused by reports relative to a certain trout stream that lay away back in the tangled woods of Wyoming County. We overheard one old veteran saying that he knew where

Ph. We overheard one old veteran saying that he knew where he could get a basketful of the speckied beauties when all other sources had fatled him; and still another telling of a stream that was filled with snow water even up to the 4th of July. From remarks dropped at one time and another, we gathered that it must be a very late stream, running through a deep zorge for almost its entire oourse; and on whose banks snow could be found almost any time in June. As near as we were able we ascertained, after diligent inquiry and search of maps, that it was called South Fork, so maned on account of the branching or forking of the Mehoopany Creek; that it flowed through the pure wilderness, that no houses were within many miles of it, and that if we shad it we would be compelled to spend a night in the open woods. These dilliculties, however, did not frighten my friend H. and myself from our determination to seek out and fish this wonder ful stream, so on the 3d of July last, about 3 o'clock in the morning we left home for a mination to seek out thou isstiff would retrieve the control of July last, about 3 o'look in the morning we left home for a few days' trouting. It was a delightful ride, over mountains and across valleys. And indeed, I know of none more pleasant and exhilarating than this same early morning ride of a party bent on a day's this hing. I twas about 7 o'look when we reached Bowon a day's using. It was adout 10 clock water we teach to the man's Creek, perhaps the best trout stream in this part of the State, as many a fisherman with well-filled creel can testify. This creek was stocked with salmon two or three years ago, but never a one of them has been heard of since. We cannot stop here, however, although it does not seem natural to pass by this scene nowever, amongs it does not extend matter of many a good day's sport, and the only one of any pretentions bereabouts. We learn that we are still eleven miles from South Fork and are advised to go fave miles further up the creek to the house of Mr. Foote, a noted hunter and guide, and put up there Fork and are advised to go five miles further up the creek to the house of Mr. Foote, a noted hunter and guide, and put up there for the first night, and in the meantime we can fish the main stream at that point. Tweive o'clock finds us;safely housed at the end of the first day's journey and thirty miles from home.

After a hearty lunch we rigged up our rods and started to whip the main stream. For myself, I can say that I never fished more diligently in my life, carefully whipping 'every pool, chancing and the started to the

diligently in my life, carefully whipping (every pool, changing my files from dark to light and again to a mean between the two, But all to no purpose. We were rewarded with only a paltry half-dozen, and those were small. Theroughly disgusted we went back to Foote's where we got supper and spent a couple of hours listening to the stories of our host of bear and deer hunts, and how he was the first to find the great pigeon roost that was in this

now he was the first to find the speak page of the meighborhood a few years ago.

There were still six miles of dense woods between us and the mouth of South Fork. To reach it we were compelled to drive five miles up to Dutch Mountain. Here we found a man to guide us over the mountain four miles and a half to our destination. us over the mountain four miles and a half to our destination. On the way over he went a few steps to one side to show us a deer lick that he had constructed some time before, by forcing some rock sait in among the roots of a tree. We can plainly see tracks that have been made the night before. Also in crossing the ridge he points out tracks that are apparently fresh. We cross the main stream and another brauch called Rollows Brook, and here we are at last on South Fork, and this with mingeld feelings of satisfaction and disappointment that we gaze on the almost mythical stream. Before parting with our guide we contracted with him to drive our horse back to Foote's, from which place we were distant eleven states. In the fonce of this we were rash enough to start thising up horse back to Footes, from which place we were usuall exerci-miles. In the face of this we were rash cough it ostart ishing up stream. But what did we care? We had come to test for our-selves the truthfulness of the stories we had heard, and we did not propose to leave any stone unturned. Big catches, big trout, the long and hard road we had come, all tended to work us up to the

propose to leave any stone unturned. By catches, big trout, the long and hard road we had come, all tended to work us up to the highest pitch of anticipation.

H. prepared to make the first east while I tovoluntarily ceased operations to watch him. Cautiously he lapproached a beautiful pool, first making a few rapid casts in the stream below, so as to render his line of the proper length. Gently and deftly he lands the feathered delusions on the further site of the pool, and slowly works them back toward him. But nothing rewards that cast. The line describes a graceful curve behind the back of the anxious theheman, and again does he propel the files fairly over the hiding place of the hoped-for trout. The files had hardly touched the water before there is a strike, to which H. responds with a quilet ferk. It was one of those little beggars that rarely got the fly the first time. The result was, the tout missed the fly and H. missed the trout and succeeded in landing his leader in the top of an adjacent tree, and with disgust depicted on his face he prepared to climb. We had no room to complain of our success safur as acthing small trout was concerned, but no large ones came to our creeks. We were disappointed. Instead of the deep groge, we found an average Pennsylvania stream, now illowing fuiletly along some level space and again tumbling with a splash and roar over huge rocks and bowleter.

That night we lay down on a moss-covered rock in the clother that we had been fishing in all afternoon, and between the wading of the stream and a heavy shower that we had had during the afternoon they were pretty wet. We managed to start a small fire, but

on account of everything being so wet, and not having an exe, 1 did not amount to much. We slept probably an hour and a balf and spent the rest of the night trying to keep warm by sitting in

and spent the rest of the night trying to keep warm by Sitting in the hole where the fire bad been.

The longest nights come to an end some time, and it was with feelings of satisfaction that we halled the coming of morning. As soon as it was light enough to see we started to our last day's ashing with twelve miles of stream to travel. We mot with varying success, but as before could get no large trout. At the junction of South Fork with the main stream the tug of war began. The creek bed is completely filled with huge bowlders, and the whole distance must be traveled by stepping from one stone to another, distance must be traveled by stepping from obscious to diodest, which soon becomes a very tedious operation. Add to this the discolored water, caused by flowing through the tamarack swamps. When one steps into it he does not know whether he is going up to his knees or to his neck. We did not spend much time in casting in the main stream, only

now and again when some pool more tempting than its neighbor now and again when some pool more tempting than its neighbor presented itself. And we soon tired of this, because for the most part our custs were made in vain. Only on one occasion was this monotony var-ed, when H., standing on a rock in the midst of the whirling current, hooked a busty beauty. In some unaccountable way he became entangled in his line, but with rare good fortune. way no became entangied in his line, but with that good fortule he succeeded in drawing the trout up on the rock, and then sitting down on him.

How anxiously did we peer around every spur of the mountain

now anxiously did we peer around every spur of the mountain and every bend in the creek in hope of seeing a clearing! And it did seem as if the end of that day's trump would never come; but come it did at last, and with it two of the most tired fishermen that ever east ally. Upon calculation we find that we have over 300 trout, varying from six to ten inches in length, and they did look very pretty when laid out in the le-obox side by side.

We left Foote's at 3 o'clock in the afternoon with a thirty-mile this before. We stored for suppose a Foote's and again.

We left roots and so close in the acteriors with a tangent drive before us. We stopped for supper at Forkston, and again at Howman's Greek, reaching P. about 4 o'clock next morning with all our fish in good condition. Taking it fall in all, it was a very enjoyable trip, and one which we intend to repeat next

We noticed one peculiar feature of this stream, viz., that not a we noticed one pecuniar teachiest time we were on it. And considering that this is a favorite and very successful batt for catching large trout in this part of Pennsylvania, we are both of the opinion that if a party were to go there with a stuck of minnows for bait they would catch more large trout in this way than with

a fly.

It is also a splendid field for shot gun and rifle, there being an abundance of both large and small game, such as squirrels, pheasants, deer and bear. Our guide told us that over eighty deer were hot and taken from there during last season. These woods are snot and taken from the reducing last season. Thus, whose whose distant only nine or ten hours' ride from either New York or Philadelphia, and offer excellent advantages for city sportswen who cannot spare the time to make more extended excursions in search of sport.

SOMETHING ABOUT BREAKERS AND DOG BREAKING.

COMBINING THE VIEWS OF COL. HUTCHINSON AND OTHER FAMOUS HANDLERS.

NO. I.

O insure good sport the shooter must be provided with good dogs. However abundant game may be, there can no be real sport without good dogs; and however scarce game may be, a good day's sport is only attainable with good dogs, and by a person who feels what sport is, and who does not look upon filling the game bag as the sole end and aim of the sportsman's occupation. The mere act of killing game no more constitutes sport than the jingling of rhyme constitutes poetry. Since, then, if you want a first-class dog, break him yourself; if, however, you cannot spare the time, be careful to select a breaker who lives where game is plenty—a man with a good temper and a plentiful store of patience to fall back upon-and of all things avoid a bad shot, for he is quite sure to be either a careless person or an impatient one at

It is to be presumed that you have selected a young dog

sure to be either a careless person of an impatient one at times.

It is to be presumed that you have selected a young dog that carries his head well up when beating, and not one that works with his nose to the ground. Though bear in mind, that a pottering dog that "tracks" can be sometimes cured if taken in hand when young, by working him on an overflowed snipe meadow, where the birds lay on the high tussocks and rafts of floating reeds. He is then obliged to feel in the air for the seent, and the sylashing made by his forelegs obliges him to keep his head well up. This system does away with the old-fashioned mechanical contrivance called the putzole-peg.

The most killing dog is one that has had but one master, for he unconsciously studies his owner's disposition along with the daily rudiments of his education. The Babel of dog language is then unknown to him, as he knows but one voice, one dialect and one code of oral and manual signals. Thus he is never at a loss to comprehend his master's meaning, and unbounded confidence in each other takes the place of perplexity and distrust. It has often been a mystery to us how borrowed dogs really could adapt themselves to a new language so readily, for at a moment's notice an entirely new list of orders must be obeyed, and, as is often the case, issued by those unfit to command. Hence we consider it equally as necessary for the handler to be "broken in" as we do the dog, and the number of good dogs that are yearly ruined are the living examples of the truth of this assertion.

The common sense (for there is no secret) in dog breating is this: Never order your dog to do an impossibility, and after commanding him to execute your wish, make him obey and stick at it; be consistent even if it takes a week, and do not leave him until you have conquered. You will him doy experience that you and he will have one or two grand tussies, but if you but firmly insist and use judgment you will be astonished do do wrong even when "thought and conquered to the induced to do wrong e

perfection of beating and working out the fine points of each shot, let him carry the game bag ten yards in the rear of the owner of one or a brace of dogs over whom birds are killed to enable the pot at home to be kept boiling. Between this pair or trio the picking up of the scattered bevy has been reduced to a science. There is no to fi he short to the results are killed to enable the results. Between this pair or trio the results has been reduced to a soil where the results are the results and the results are results. scattered boy has been reduced to a science. There is no one bevy shot, followed by a few random cracks at the birds when they have been marked down, this finishing it; but a well-directed plan, well carried out, that in the end fills the game bag, and shows to perfection the well-trained and cleverly handled dog. For the excellence of the art of shooting is to leave behind you at the end of the day the least number of birds unmoved on your best.

the day the least number of state beat.

In the paragraph above we were led inadvertently to make reference to what is generally known as the "pothunter." Now, not wishing at the outset of this paper to be misunderstood, we take the liberty of digressing and giving our views on the subject, because we frequently hear in these civilized parts, the so-called "pot-hunter" held up in derision. First of all, our interpretation of the term "pot-hunter," is one who is compelled to shoot for a living, that he either kills game which he has the audacity to devour himself, or he carries it to the nearest market where he there disposes of it. However, in sither case the came is utilized, which is more than can. audactly to devour himself, or he carries it to the hearest market where he there disposes of it. However, in either case the game is utilized, which is more than can be said of the spoils of many a shooting trip, so wan-tonly left to rot when it has been shot down. It is not necessary that the "port-hunter" or market-shooter should be a poacher, shoot out of season, or that he should bunch his birds any more than those who decry him. Ningtraniactives out of a bundred it is this war. should bunch his birds any more than those who decry him. Ninety-nine times out of a hundred it is this very "pot-hunter" who is first sought out by city sportsmen in their outings, to act as guide, philosopher and friend, and we remember on more than one occasion seeing the "pot-hunter's" dogs find all the birds. This has led us to consider this appellation of "pot-hunter," a species of cant used by a class of tyros to whom the birds, so to speak, are sour. So if you do not break yourself, you will, after casting about, probably end in sending your dog to a "pot-hunter" to be broken.

Before thumbing through the 315 rules for dog train-

will, after casting about, probably end in sending you dog to a "porthunter" to be broken.

Before thumbing through the 315 rules for dog training, given us so thoroughly by Col. Hutchinson, and making reference to other practical writers, it may be well to say that we will have to apologize for some errors and no doubt for many deficiencies in attempting to condense a method for the training of dogs. Were we to offer an article based alone on our own experience, we would be at once accused of plagiarism, for no subject when a dog is six or seven months old his education.

When a dog is six or seven months old his education.

When a dog is six or seven months old his education should begin, although you ought to have required obedience from his infancy. Beware of calling your dog by a name similar in sound to words that may be used for commund; for example: Don—down; Charm—charge; To simplify the code of command, the ten following words will be found to cover all that is absolutely necessary:

1st.—The dog's name, to be used at close quarters only, to which he should come in.

2d.—"On"—to run forward, or to get up.

3d.—"Careful"—to take heed.

4th.—"Toho"—to stop still.

On —to run torward, or to get ap.
Careful"—to take heed.
Toho"—to stop still.
Charge"—to crouch on the ground, to drop to

other charge — to crouch of the grand, to drop to hand, at the report of the gun,
6th.— "Dead"—to encourage to seek for a dead bird.
7th.—"Fetch"—to retrieve the bird.
8th.—"Loose"—to drop the retrieved bird in your

hand.
9th.—"Heel"—to come to heel.
10th.—"Ha!"—to be used to correct or check any action, such as crossing a fence, etc.

action, such as crossing a fence, etc.

We would advise every one to adopt a whistle peculiar to himself. We for a long time have accustomed our dogs to the three notes of the black-breast plover, using the two first in a low tone, to attract the dog's attention, for him to receive the hand signal—and the sharp, shrill sound of all three, to call him to us. Although whistling is apt to disturb the game, it is an infinitely better call than shouting the name of your dog all over the country, "Penn," in his clever maxims on angling and chess, observes to this effect: "If you wish to see the fish, do not let him see you." And with respect to shooting, we may say: If you wish birds to hear your gun, do not let them hear your voice.

let him see you." And with respect to shooting, we may say: If you wish birds to hear your gun, do not let them hear your voice.

No dog should be taken in the field until he perfectly understands the meaning of certain words and signs; and in pursuance of the plan, you ought to give these lessons when you are alone with the dog, and in a place where his attention is unlikely to be attracted by other matters. Give them also when he is fasting, as his faculties will be clearer and he will be more cager to obtain any reward of food. A quarter of an hour's daily house-breaking for four weeks will effect more than months of constant working in the field without preliminary tuition. Allow no one, whether wife, children, or friend to assist you; nor at any time while the dog is being educated, to interfere in any way. Call the dog to you by the whistle you propose always using, and attach a check-cord to his collar. Throw him a small piece of meat, saying, "Dead, dead," Repeat this several times, tossing it into different parts of the room, and let him eat what he finds. Then throw a piece, saying, "Dead," and the moment he gots to it, check him by jerking the cord, at the same time saying, "Icho." By pressing on the cord with your foot, you can restrain him as long as you please. Do not let him take what you have thrown until you say the word "On," accompanied by a forward movement of the arm. Let all your commands be given in a low voice. After a few trials with the check-cord you will find your self enabled, without touching it, and merely using the word "Tolio," to prevent his seizing the meat until you say "On," Should he draw toward the meat before he has obtained leave, jerk the cord and jerk him back to the spot from which he stirred. He is not to quit it until you order him, occupy yourself as you may. At odd times let him take the meat the moment you throw it, that his eagerness to rush forward to seize it may be continued, only to be instantly restrained at your command. To teach him to "charge," raise you

his fore legs extended and his head resting between them. Nothing is more slovenly than to allow him to sprawl on his side, or should he be of timid disposition, roll over on his back, with his legs in the air. Do not let him raise himself to a sitring posture. Walk about him, around him, and after a sufficient time call him to you. Perfect him in charging very thoroughly; practice him at odd times and in your walks, always remembering that your companionship will tend to enlarge the dog's ideas. As dogs are very imitative, a well-broken dog will aid you very materially at an advanced stage in this difficult part of your puppy's education. At very uncertain, unexpected times catch his eye, having previously stealthily taken hold of the check-cord—which should be a long, light one—and then hold up your hand. If he does not instantly drop, jerk the check-cord violently and drag him back to the exent spot where he should have crouched down. Admit of no compromise; you must have implicit, unhesitating, instant obedience. When you quit him he attempt it, drive a spike into the ground and attach the end of the check-cord to it, allowing the line to be slack; his fore legs extended and his head resting between them attempt it, drive a spike into the ground and attach the end of the check-cord to it, allowing the line to be slack; then leave him quickly, and on his running after you he will be brought up with a sudden jerk. So much the hetter; it will slightly alarm him. If the dog is not of timid disposition a spiked collar can be used to advantage at this period of his education. Take out your whip—it should be a stinging one—and let him feel it as you take him back to the precise place he quitted. Do this invariably, though he may have scarcely moved. Then make him again "charge," always observing to jerk the cord at the moment you give the command. After a short time he will be certain to lie down steadily, until you give him the order, "On!" to move. Most probably he will not at first rise when he is desired. There is no harm in that. Go up to him, pat him, repeat the order, "On!" and lend him for some paces, "making much of he will not at first rise when he is desired. There is no harm in that. Go up to him, pat him, repeat the order, "On!" and lead him for some paces, "making much of him." When he is well confirmed in this important lesson take him on a level, cleared piece of ground, and as practice only makes perfect, continue the instruction, allowing the dog to range about, dragging the check-cord after him.

It is now the proper time to introduce him to the sight and sound of a gun and to the report of which he should be trained to drop, and for the following sufficient reasons:—

and sound of a gin and to the report of which he should be trained to drop, and for the following sufficient reasons:—

If there is any fault to which a dog can become addicted more vile than another it is that of "running in." When once admitted, it heads a list of vices that not only stamp the dog as perfectly worthless to his owner, but it makes hin a spoil-sport and nuisance to every one with whom he comes in contact. When this habit is once established it is an extremely difficult one to cradicate. If the dog does not charge at the firing of the gan he will soon begin to "run in" to retrieve his birds without waiting for the proper order. After two or three rough and tunules with a crippled bird he will begin to chase those that are not winged. From this moment all discipline is gone, and unsteadiness and flushing will become the order of the day. The neighborhood will be awakened with shouting and shrieking, the gamut of the whistle will sound in the air, to be followed by the cracking of the dog whip and the grunuts and yells of the luckless brute. It is about this time that the "breakers with cold lead" heave in sight, and shortly the air is tainted with the fumes of sulphur and the odor of perspiration and blood. Almost every reader that has lad any experience in the field has been a witness to some similar scene. Has it occurred to you that the dog was not the one in fault, but the handier, on whom all the blame should rest? If not, be assured that it is so; and if you are not an impassive person, but one who is apt to speak your mind, direct all remarks on the subject to the animal with the two legs—and may they do him good.

In the days of the nuzzle-loader it was very much

direct all remarks on the subject to the animal with the two legs—and may they do him good.

In the days of the muzzle-loader it was very much easier to consistently enforce the dropping to shot than it is now with the breech-loader in the hands of every dog-handler. Thus you, as well as the dog, have a lesson to learn, and you should always remember not to move on until you have seen that your dog has charged. For no matter how thoroughly you have him under control at the start, unless you keep him on all occasions up to his duty he will soon deteriorate and drift into bad habits that will be hard to break him of and make him anything that will be hard to break him of and make him anything but what he should be—a first-class dog. Therefore, break your dog to drop to shot, and the moment star are consumed in keeping him at his charge will be returned by hours and days of pleasant sport. The minute's rest will neither hurt you nor your dog, but tend to

steady the nerves of each.

We can well understand that if a dog could be broken We can well understand that if a dog could be broken to stand perfectly still instead of crouching down he would be much better able to mark his birds, and that in cold weather, in wet places, charging is severe on him. But not one young dog of the right sort out of a thousand can be made to stand immovable, and the difference between lying and standing in water is not so very great after all; the dog in the long run having to suffer more from numberless floggings than he ever would from the cold.

ENTRIES FOR THE DERBY.—New York, March 15th.—
I send you additional entries received since your last week's issue, which, be kind enough to insert in next:—Drake (Tory-Jaunty), white and liver pointer dog; Trinket (Tory-Jaunty), white and liver pointer bitch; Lena (Tory-Jaunty), white and liver pointer bitch; Mephisto (Faust-Zeal), white and liver pointer dog; Tray (Tory-Jaunty), white and liver pointer dog; Yuking (Tory-Jaunty), white and liver pointer dog; Nargenrite (Faust-June), white and liver pointer dog; Margenrite (Faust-June), white and liver pointer bitch, entered by St. Louis Kennel Club, Chas. H. Turner, Secretary; Cushla (Elcho-Fire-Fly), red Irish setter bitch, entered by Mr. W. C. Harding, Stamford, Conn.; Clyde (Elcho-Gypsey Queen), red, white tipped Irish setter, entered by Mr. Wm. A. McIntosh, Pittsburg, Pa.; Cambridge (Gladstone-Clip), blue Belton setter dog; Dawn (Gladstone-Clip), blue Belton setter dog; Prince Hal (St. Elmo-Maida), orange and white setter dog, entered by Dr. S. Fleet Speir, Brooklyn. N. Y.; Max (Dash III.-Gitt), white and black setter dog, entered by Mr. A. E. Sterling, Cleveland, Ohio Chas. De Ronge, Secretary, N. A. K. C. ENTRIES FOR THE DERBY .- New York, March 15th.

Q., Long Prairie, Minn.—My rubber boots have been pur ya nail, and as they are yet new I wish to know if there is not a ray to stop the leak effectually. Ans. Send to the rubber stores or rubber coment. See addresses in our advertising pages.

M. N., Grand Rapids, Mich.-I have a gun, the stock of which is too straight for me. Can you give me the name of some reputable person or firm by whom I can have the stock bent, so as to remedy the defect. Ans. H. C. Squires, No. 2 Cortlandt street, New York.

New York.

W.C.C.S., Brookline, Mass.—I find that grass lines (like sample Inclose) are very kinky. Can that fault be remedied? Ans. All these lines have the same fault. You can only partially remedy it by putting your line full length in the water, and when recling in taking good care to wind straight.

BROOKLYN.—The Brooklyn Y.C. is not as yet represented in

the N. Y. A. The person claiming to represent that club and who bad himself made Chairman of the preliminary committee is an impostor. He has been outset from the N. Y. A. at the instigation of this journal. Have no dealings with him.

Reader, New York City.—I. The largest size of shot used in choke-bores without chambering is No. 1. 2. Dr. Henshall, of Cynthiana, Ky., is preparing a book on the black bass, and this will probably be what you wish. 3. You will find excellent black bass fishing at Cawego, N. Y. See late files of this paper.

Your \$15 gun is a fair and safe weapon. D. L., New York, same on the lock-plates is not that of the maker, the latter being name of the loca-phase is not that of the latter length as mentioned by you. Barrels of Connecticut seed are made of steel and from scraps welded together. The barrels of your gun are made of different kinds of from without the steel. The charge of 3drs. is safe.

C. M. S.—Rushton builds ten canocs to every one of Everson.
Would advise a modification of the "Shadow." See back files
for canoo building. Will give further directions shortly if possible. Or get Raden-Powell's book, "Canoo Cruise in the Battle," which contains much information, from Williams & Co., 283 Waington street, Boston.

W. P. C. Binghamton, N. V.-The fish-hooks sent for our inspec-W.F.C., impanamon, N. F.—The assistances and for our inspec-tion reflect eredit upon the ingenuity of the maker, but as fish-hooks go, we should not advise your friend to undertake their ex-tensive manufacture with high anticipations of the mercantile side of the venture. The best made hooks of the day are the result of a great many years' experience and a large outley of can.

J. J. B., Ontario, Can.-Last fall while shooting in Western On-J. J. B., Ontario, Can.—Last fall while shooting in Western Ontario I killed a fine specimen of a bird; it had a heautiful red-creat or top-not, a white ring around its neck, and white tips on the wings; the rest of the bird was very black. It was no doubt of the woodpecker species, as it made the woods ring with its bill and chattering noise. Now was it the bird desernized by Mr. Venor, of Montreal, in last week's issue, pileated woodpecker, Hyldomas pileates? or was it the Pieus birtellis? The inhabitants called it the "Cook of the woods." Venor calls it "wood-cook." Who is right? I never saw but one before; they are very rare specimens in this part of Canada. Aus. You say nothing about the size of the bird, a very important point. It certainly was not Pieus boreails, and probably was the pileated woodpecker. as not Pieus borgalis, and probably was the pileated wood Hytotomus pileatus.

SUBSCRIBER, Muncey, Pa.-1. Is there a hammerless gun now Subscitter, Muncey, Pa.—1. Is there a hammeriess gun now made over which the shooter has as good control of humanes, i.e., in mising and lowering them at pleasure, as our old guns with hammers? 2. In any hammerless gun now, made can hammers, after being raised, be lowered in any other way than to like them down? 3. Would not the inventor of a hammerless gun that could be loaded or broken down into position for leading without cocking by so doing, and one whose humaners could be without a coking by so dough, and one whose hummer count raised and lowered at pleasure, have a good tings? Ale, 1. The shooter has practically be and control of hummer as in the ordinary gun. When opened for the insertion of shoils the grum may be cocked again, uncocked by simply holding back the triggers. 2. The hummer segment of the decided and cocked, may be gers. 2 the ununiverse gain, while the triggers are held back. 3. We could not deede without exponinting and compar-ing the two actions. The present hammerless is of about as sim-ple and rapid manipulation as could be wished for

REMOVAL.

O N or before May 1st, the FOREST AND STREAM will remove to the new office, now being specially fitted up for its reception, in the New York Times building, Nos. 39 and 41 Park Row.

This change of quarters is one of imperative necessity, When we moved into our present office, in the spring of 1877, they were thought to be all that we should need for years to come. But since then our staff has been largely increased, our clerical force has doubled, our mailing facilities have become insufficient, other things have advanced and enlarged in proportion, and to-day Fulton street is too narrow for us. We must have room to expand. To frankly confess the truth, too, we have long wearied of the unceasing stream of humanity and traffic, that with rumble and roar and jar neverending rolls on beneath us; and we are disgusted with the forest of telegraph poles which have grown up before our windows. Possibly, as the poets say—and it is a very pretty thought—the wires are instinct with living messages of life and weal and woe; but the poles themselves are sorry specimens, and we shall be glad to exchange them for the trees of the City Hall Park, and the birds (i. e., English sparrows). One other environment here in Fulton street has sadly annoyed us. That is the varnish sign across the street, which for three years has formed the limit of our horizon; this, too, we shall exchange for an outlook over the Jersey hills, and to the sunset beyond.

In short, we are moving into much more spacious. central and convenient offices, where we shall have room to surround ourselves with all the appurtenances of the craft, specimens of American game, mementoes of camp life and other things congenial to our tastes. And there, in the future, as here, in times past, we shall welcome our friends, old and new, and from Park Row the FOREST AND STRÉAM, let us trust, may go forth as full of good things as are the volumes which have marked its growth while in Fulton street.

-Mr. Edmond Redmond, of Rochester, N. Y., a correspondent of Forest and Stream, and the inventor of the diving decoy and explosive target ball, in 1877 invented and projected the ship railroad for the Isthmus of Darien, which engineers now say is superior to a canal for the purpose of transporting vessels between the oceans.

-We must again urge secretaries of clubs to send us their reports as early as practicable after club meetings. | the only dog I ever lost in that way."

Notes.—His name was Gosling. He boasted that he was the greatest walker that had ever been known, and that he was going to bring the champion belt back from England by an original system of pedestrianism invented by himself. This brilliant plan was to take a deep breath and then by the application of bandages to keep this air stored up in his lungs for a week. It was a grand conception. Its realization promised to revolutionize the world. But they decided that the inventor was affected with the form of insanity known as the "general paralysis of the insane." So the belt will stay in England, and the life of man will still be three-score years and ten.

Some months ago we published an account of an alleged extraordinary slaughter of cariboo in New Brunswick, and in commenting upon it we took occasion to note that few perpetrators of such butchery were moved to detail their exploits in print. The "Sanguinary Deer Hunt," on another page, is as decided a contrast to this as could well be imagined. It must not be inferred, however, that because upon this particular occasion the writer of the sketch did not (or says he did not) bag any game be is therefore no bunter. The fact is that many a deep has fallen to his rifle, and now he can well afford to con vert the tragedy of Hamlet into a comedy, with Hamlet left out.

Indeed to fully appreciate the humor of such an experience as this, one must have passed beyond the stage of the novice, who is eager to kill for the sake of making his record. It is the veteran who really comprehends the ludicrous incidents of the battle-field, and the scholar or specialist of established repute who is not afraid of practical jokes. Here is a case in point, told by the cele brated English naturalist, Rev. J. G. Wood:-

There is a cairn, broken and battered, on the summit of the hills near the Very well-known book to that very well-known book to that cairn as a Danish monument, whereas, I built it myself; and, by the san to find the first own the rail way. handle. Jokes of this kind are very prevalent among scientific men. There is, for example, one of our best entomologists who prides himself on his skill in manufacturing insects. If they have wings, he discharges the color by chemical means, and paints then afreeh. He substitutes various parts of various beings for those of the creature which he manufactures, cutting out from an old champagne cork anything that may be found wanting. He once tried to palm off on me a most ingenious combination. The head was made of cork, the wings were real wings, only turned the wrong side upward, and the body had been taken to pieces, painted and varnished. Unfortnnately for himself, this very elever forger of entomological rarities had visited one of those houses where the celebrated cardinal spider lives, and had added the legs of a spider from Hampton Court to the body, wings and antenne of insects from all parts of the world. The spider's legs. afresh. He substitutes various parts of various beings for those antenne of insects from all parts of the world. The spider's legs betrayed him, but the author of the wortomological betrayed him, but the author of the entomological orgery was not in the least disconcerted at the discovery of the fraud. There are no school-hop's who enloy a joke balf as much as your celebrated scientific and literary men. Their reputation is a your celebrated scientific and literary men. Their reputation is lot of after for cavil, and when they get together they are as playful as so any kittens. The museum of the late Charles Waterton was ful

It is among the most experienced and capable sports men, too, that we must look for advanced sentiments in sporting ethics. The men who study wood lore most thoroughly and intelligently, and who become familiar with the secrets of the forest and stream, are those from whom we most often hear protests against unmanly and unsportsmanlike conduct. Among those who have so courteously offered us their experience in the different methods of deer-hunting is Mr. T. S. Van Dyke, of San Diego, Cal., whose note accompanying his letter admirably illustrates what we have just said. He writes :-

I take pleasure in answering your questions about deer hunting though I am doubtful if I can help the cause much, so long as the idea prevails, and is helped along by sporting writers, that the primary use of game is to cat; that one of the greatest bons vouchsafed to man is to get his tooth into a baunch of venison, and that the market's claim to respect is inviolable. However, I am about twenty-five years ahead of the time in my views, so I will not bother you much with ther

Mr. Walter M. Brackett, of Boston, is best known to American anglers as the author of the famous four salmon pictures, so often referred to in these columns. It must not be thought, however, from the frequent mention of these masterpieces of fish-painting, that Mr. Brackett has never done anything else. A true artist is rarely satisfied to rest on his laurels. The notice of Mr. Brackett's contribution to the Berlin Fishery Exhibition, which we made from a brief newspaper mention last week, did that gentleman injustice in stating that he was to send to Germany one of this series of salmon pictures. The painting which he furnishes to Prof. Baird will be a new work, upon which the artist is just now putting the finishing touches, and is said by those who have seen it to reflect great credit upon this branch of American art.

Virtue is alleged to be its own reward, and it often happens, in the realm of canine morals at least, that the practice thereof is attended with no more substantial compensation. It will be remembered that Mr. Richard Moncure Conway, of Spottsylvania County, Va., some weeks ago advertised in the Forest and Stream a lost dog which had come into his keeping. And now, after thus seeking to restore the animal to its rightful owner, he writes: "Some one has stolen the cocker—

Philadelphia is excited over the birth in that city of a baby elephant. The mother is "Hebe," the great black Asiatic elephant of the London Circus.

Modern science maps out the floor of the ocean with the same exactness as the plains of the continents; determines the altitude of mountain ranges on land and in the sea alike, and follows the movements of the inhabitants of the deep as intelligently as those of the beasts of the field. Few persons, outside of the circle of workers who are actually engaged in the work, realize the wonderful perfection to which the methods of this branch of scientific investigation have been brought, and the importance of the results attained. Professor Hind's paper on "The Movements of Salmon in the Sea" illustrates the progress in this department of knowledge, and is, moreover, a most valuable addition to the series of important papers contributed by the author to this subject.

WILD RICE FOR THE RANGELEYS .- Mr. J. A. L. Whittier, noticing in Forest and Stream an advertisment and editorial notice as to wild rice to be had from Charles Gilchrist, of Port Hope, Ont., has purchased from him the balance of his present supply, and purposes to plant it in the shallow waters around the head of Lake Mollechunkamunk, one of the Rangeley Lakes, as soon as the ice goes out this spring, in the hope that hereafter visitors to the lakes (and especially those visiting Birch Lodge, Mr. Whittier's fishing camp) may enjoy good duck shoot-FOREST AND STREAM will be kept informed as to the result of the experiment, which no doubt will be watched with interest. All the Rangeley Lakes now need is as good shooting as there is good fishing,

AMERICA AT BERLIN.—The following appointments have been made for the representation of America at the Berlin Fishery Exhibition next month: Prof. G. Brown Goode, deputy commissioner in charge; Mr. Fred Mather, department of fish culture; Mr. F. W. True, care of the exhibits : Mr. Julius E. Rockwell, secretary : Mr. Joseph Palmer, taxidermist in charge of casts; Capt. Joseph W. Collins, in charge of fishing apparatus. The experts are charged not only with the exhibits in their own depart-ments, but also to investigate and report upon all European methods of gathering statistics of fish culture and fishing. The party sail on the 20th inst. in the North German Lloyd steamer Neckar from Hoboken. We shall be in receipt of letters from our special correspondent, and have made arrangements for securing the fullest and best reports of the Exhibition.

OUR ALASKA LETTER.

THE KURO-SIWO - THE AURORA-BOREALIS - SOMETHING ABOUT THE PEOPLE-ORNITHOLOGY.

SITKA, Jan. 18th.

TEAMER day, the great and about the only event which interrupts the monotony of our life here, has come and gone; but although the mast-head has been manned by as eager lookouts as ever watched for the black smoke on the horizon of a blockade-runner, their watch has been in vain. She has failed to connect, and what is worse, we hardly hope for her to-morrow, and perhaps another week may pass leaving us newsless and letterless; for if the stormy weather and the blinding snow-storms, which have for a week buried Sitka and kept the sky obscured, have extended to the southward, she has had no weather that would justify her risking the trip through the devious and tortuous passages between Portland and Sitka. And if running, it has been at slow speed.

This has proved a blank month for fishing or hunting, and except the occasional bagging of a pintail (Anas caudacuta), or a "long-tailed duck," and an occasional "sawbill" by a lucky rifle shot over the stern, the game resources of Alaska have not been diminished by me, Coues' description of the "long-tailed duck" is perfectly that of the duck which is most common here now; they come in small flocks and are very shy. The Indians bring in a few mallard, buffleheads, or butter-balls, all of which are very good, especially the mallard.

Plenty of vension and some few ptarmigan are brought in daily, but the deer are getting poor and the rutting sea-son has begun. My fishing has been confined to attacks on a case of Cutting's canned salmon, which is good; a box of Alaska herrings packed in Portland, which are not good, and one of "boneless codfish," which my Cape Ann experience teaches me to accost as "pollock," have been deprived of other resources, we have had plenty of climate to furnish us with something to think about. I think we are prepared to out-brag a Californian, even if a Forty-niner. For seventeen days the thermometer has been below freezing; so low down, in fact, that to-day with it up to 31 deg, we feel as though it were rather warm. It did touch minus 7 deg., and it didn't touch plus 24 deg. during the period.

Having nothing else to hunt, I attacked the kuro-siwo -(please don't let your type-setter get that word "kunsuir," as he did in a previous letter)—and have succeeded in obtaining some valuable data about it, all of which is duly reported. I will only lumber your columns with the fact gained, that with a range of variation of air temperature of 57 deg, the temperature of this Japanese gulf stream varies less than 8 deg. With air at 50 deg., the water was 48 deg.; with air at minus 7 deg., the water was plus 40.5 deg.

And the extreme cold weather rendered visible to usand a beautiful vision it was too-the map of vapor which constantly arising from this body of warm water causes the excessive humidity of the climate of Alaska. It whirled and danced in the wind and assumed all sorts of fantastic shapes, resembling smoke, or dry steam, more than it did fog. Bits of it would get caught by a gust of wind and go whirling and dancing and shaping itself into mist rings.

At ten feet from the surface it became invisible at the lowest temperature, and at plus 14 deg. it ceased to be visible at all. The warming effect of this river of warm water upon adjacent shores was made manifest to us by a comparison of the records of two thermometers-one on board ship, in the midst of it, and one well back from the beach, ashore. At all times the record on board was the higher by 1 deg. to 3 deg.; and this difference was greatest in the day time, with a bright sunshine.

We had too another sensation in the way of a natural phenomena granted us, which, if we had not come to Sitka, we might have passed our lives without seeing and enjoying, viz., an aurora borealis, which came up to the most vivid description that I have ever read. It occurred on the morning of the 17th inst., and although I had left a masquerade ball because I was sleepy, at 1 A.M., I felt fully repaid for sitting up till after 3 A.M. to watch it. I will essay a description, but I know I'll fail.

A dense black bank, reaching to, perhaps, half their height, above the chain of high hills which, from northwest around by north to northeast, form our horizon, made for them a gloomy background, against which the peaks, crowned with perpetual snow, stood out in bold relief. This bank was surmounted by a curtain of white. reaching some ten or fifteen degrees further toward the north star. Away back behind this curtain-perhaps at the Pole itself-skillful operators were giving with a camera of immense power an exhibition of phantasmagoria (I use the Spanish word, for I know of no English one that conveys to me the impression), so grand that it was well worth the price of admission, even if the latter were a winter in Sitka.

I call the upper bank a curtain, for such it seemed, and white, because no other shade would have permitted the slighest changes in hue of these celestial fireworks to have so plainly shown themselves. In reality this curtain was for two hours seldom white for more than a few moments, for nearly constantly its hue was changing from a pale green tinged with pink to a deep rosy flush, and its shape, too, varied. At times its contour would be undulative like waves, and these undulations would pass from west to east, and disappear, and at others it would show a sharp, distinctly-drawn arch, as perfect as ever seen in a rainbow. These colors would brighten and fade, as though these various hued fires were advanced and As well as a little thing can represent a great one, the varying intensity of glow of a captured firefly is typical of these changes.

Occasionally the whole curtain would tremble, then suddenly a broad band of brighter glow would shoot up into the sky, and reach above its upper edge; this would be quickly followed by another, and soon the curtain was traversed by many bars of elongating and shrinking light. For a space they would mark time, and then go dancing off to the eastward : new ones, or the same old ones, coming back around the curtain, as in a theatrical procession, would appear at the western extreme, and follow their leaders.

At times the black bank would draw up into a peak in one place, and from its summit a jet of light would suddenly dart upward, and I could make no mistake in judging that the exhibitor was depicting a volcano in eruption, Toward 3 A.M. the exhibition drew to a close, bank which had been arising from the southward invaded the region of the Aurora, the temperature rose, and the hygrometer showed the approach of rain, and to-day we have it, the first in nearly a month; a steady, constant pour down, alternated with intervals of snow, the flakes of which, larger than geese feathers, melt as they fall. Our cold snap is over, the weather has changed, and whether there is a connection between this marked change and the aurora, or simply a coincidence, I'll leave to more learned meteorologists than I am to establish.

Jan. 23d .- No steamer yet, and you who get from day to day your mails can very little appreciate the length of the five days that we have been expecting her. And yet we cannot wonder that she has not come. She is commanded by a weatherwise old scaman, and has for pilot another, and neither of them, certainly not both, would have exposed her and her people to the dangers that would have attended an attempt to get to Sitka during the last five days. It has rained and hailed and snowed and squalled steadily, and the surf comes rolling in over the low islands in a way that makes us congratulate ourselves that we are snugly moored instead of outside catching it."

I don't want any more "phantasmagorias" to come anywhere near steamer day; they are all very well to

taper off with after a "baile", but, like some other very early morning dissipations, the after effect is not pleas-It has struck me this evening that there is probably among your readers-in fact I know there is-those who would relish a little information gathered upon the spot in regard to the manners and customs of the new lot United States citizens to whom by our treaty with Russia we fell heir. Minerya-like, in this respect and no other, these people came full grown into this new but, unlike her, they brought with them the recollections and habits of the one in which they had previously lived.

In 1868 the United States became the proprietor of this country and of its people, and became enabled to boast with the English that the sun never sets on her nossessions, which ought to count for something in reckoning up the profit and loss of the invested seven millions.

The people here, some three hundred in number, hardly as yet realize that they are citizens of the United States. and an attempt to impress upon the more intelligent ones among them that such is the case is met with either indifference or resentment. "No. I am not." said a lady to me when I tried to convince her that we were fellow-citi-"Iam always a Russian." "Why?" Iasked. "What has the United States given us for that which they sent away?" After considerable reflection, and nearly giving up the conundrum, a happy thought struck me and I answered, "the Jamestown." I could not have done better. Her frown relaxed, and a pensive expression took its place. Memories of those happy days when her father, a Russian gentleman; her uncle, a Russian General, and their associates, made of Sitka a paradise for those who, of Russian descent, had never left this. their native land, mingled with fresher memories of the "bailes" at the castle, the strolls to Indian River, the boating trips to the island, and the hops on board, and I took advantage of the moment and changed the tonic.

We have here, as I have said, a community of about 300 people, the males of which have never voted, and don't know or care who is, was, or is going to be, President, and not one of whom has an atom of patriotism or pride in being a member of the great Republic. They are purely Russian in their thoughts, tastes, habits and religion; and yet the Russian element is not very strong among them. The old saying that "Skin a Russian and find a Tartar," should be modified to fit Sitka. Here, under a Russian surface, lies a native American foundation, for nearly all of these people are of mingled Russian and Aleutian blood. As a class they are worthy people, but almost entirely devoid of energy, and so ac customed to poverty that they hardly think it worth while to undergo any fatigue to better their condition. There are among them those who are striking exceptions, but they are few. They are not to be blamed for this apathy. Neither Russians or Aleutians are characterized by the go-ahead proclivities of the Anglo-Saxon, and their descendants, the Creoles, cannot be expected to develop traits not transmitted to them.

These people are very religious. The orthodox Greek

Church has more power over them than the Government would ever attain were resistance among their peculiaritics. In every house there hangs in the corner of the best room—and, I am told, in every bedroom also—a frame in which, surrounded by gilt and silver ornaments, is enshrined the image or picture generally of the Virgin Mary, in some of Saints. These people have been acoused of idolatry, because of the reverence in which they hold these shrines, which are called obrazes.

I am convinced that the charge is erroncous. image in this shrine is to them simply a symbol, and held in the same respect as is the crucifix by Roman Catholics, and the Bible by old-fashioned orthodox Christians. The forms and ceremonies of worship in the Greek Church are elaborate; in the standing congregation every lip is moving with the prayers constantly, many hands employed in crossing, and some knees bent in genuflection, which are carried to an extent equaled only by the konton of the Chinese. During the entire service a chant is rendered by an invisible choir, and the whole effect would be to sustain and increase reverence if once it were acquired.

They are much given to little tea parties, at which the singular and not very pleasant custom prevails for ladies and gentlemen to occupy separate rooms during the repast. This may be due to the fact that with the men cigarettes form an alternative with each course, and the women here have not imitated the women of Russia in acquiring this habit. Tea is served to the women in cups, to the men in tumblers, and the repast is almost altogether composed of sweet things, such as preserves, tarts and cake. It is possibly owing to their great consumption of sugar, or it may be to some blood defect, that a good set of teeth is a rarity. Some have a habit, in sweetening the tea, of holding between the teeth a lump of sugar and sucking the tea through it.

Milk is an almost unknown article of food-with them weaning means something. Tea is served by means of a samavar, which is a brass or copper urn, in which, by means of a charcoal fire, water sufficient for many cups is kept boiling. They are exceedingly fond of dancing, and many of them are natural musicians, the concertina gunners have at Bay kidge this season of the year? and or accordeon being the favorite instrument. During the

Christmas holidays a continuous series of masquerades prevailed, and several very pleasant mask balls were given.

In entering one of the houses the article of furniture which attracts the attention of a stranger is the stove. This standing generally in a corner, consists of a cylinder of sheet-iron lined with fire-bricks; it is from two to three feet in diameter, and reaches from floor to ceiling, to which it has the appearance of a supporting pillar. In using this stove, wood is piled in through a door a foot square near the base, and a brisk fire kept up for an hour or two, then allowed to die out; and when the gas and smoke have entirely disappeared a damper in the upper part is closed, and the stove becomes a radiator of warm air for twelve or fourteen hours, with no further attendance; the danger of shutting down and throwing gas into the room-coal gas-necessitates care in the management of these stoves.

There are among these families some of nearly pure Russian blood who have received the advantages of education, and by their culture, refinement and other estimable qualities afford to those of us who have established a school here great encouragement as to the probable future results. The material is good, it wants only the polishing.

Jan. 25th.—The steamer is just in, nearly a week over time, having been detained by bad weather, and it is only through protest that her Captain is prevailed upon to give us till to-morrow morning to get up our mails. So I must drop some other things and save this letter by winding it up.

The comparatively mild weather during the week has started the ducks in, and I have obtained and identified by means of Coues' Key as follows: Old-wife, male and female; harlequin, do.; surf duck, black scoter, mallard and "Golden Eyes." The descriptions are nearly all perfect; but in two cases I think that I can add a bit: My scoter has a membranous patch reaching nearly to nostril or culmen and sides of bill, and the tertiary feathers are tipped with white. And in my old-wife, the outer vanes of all of the tail feathers have more or less black, bordered and terminated with white, and the inner vanes white, and beside the two long tail feathers in center there are two others about half their length, all four being black. As I learn to use this Key I appreciate its value, and shall devote myself to supplying any errors of omission I may detect, which may be due to variations not as yet observed.

GAME PROTECTION.

PENNSYLVANIA MIGRATORY QUAIL.—Towanda, Pa., March 12th.—I notice occasionally in your columns items in regard to the migratory quail, and should be glad to hear more of this experiment, and thinking that there are others probably similarly interested I am prompted to state what I know in regard to the one hundred that the Rod and Gun Club of this place procured and released in this vicinity. They came to us in fine condition, and were (I can say from personal knowledge) freed in favorable localities. Since then I have heard from reliable sources of four different broods of them being hatched, ranging from twelve to cighteen each. They disappeared as the cold weather set in last season, and I do not think there were but a few of one covey of them killed, and that was, of course, not done by any of our sportsmen. From our limited experience we should incline to think the introduction of them a success, which will be confirmed if they only return to their summer residences the coming season. Jor.

Taxing Guns.—Brooklym, March 15th.—Editor Forest

their summer residences the coming season. Jor. TAXING GUNS.—Brooklyn, Murch 15th.—Editor Forest and Stream:—It is with real pleasure that I read the different arguments, pro and con, on my proposition to tax the shot gun; but I must admit so far none of said arguments are very strong, or even tenable. A sportsman's heart, everybody knows, is very large, and such is, I think, the case with my friend and fellow-townsman, Harry Fenwood. The idea of his old friend not being able to pay a yearly tax of three dollars is certainly very bad, but I think with a fittle ingenuity and self-sacrifice it can easily be overcome. We have at the present an Irish famine relief fund, a policeneu's fund, and why should we not have an old sportsmen's relief fund? Let the broken down sportsmen be divided into two classes, the junior and the senior class. The junior class would include all above forty. Let there be raised, through your paper, all over the country, voluntary subscriptions. Mine will be five dollars to stort with. These subscriptions will be known as the 'Old Sportsmen's Relief Fund? 'Each member of the senior class will be entitled to a yearly amount out of said fund, provided that said member can prove that he has been all his lifetime a good and true sportsman, that he has never been a market shooter or a pot-hunter, and that he never spent any money foolishly at pigeon shooting. Unfortunately I cannot, at the present, suggest anything for the junior class; still I night give them a little advice. Should they be married men, for their wife's and children's sake I should tely, on the contrary, be single men, shooting. Should they, on the contrary, be single men, shooting. Should they, on the contrary, be single men, shooting. Should they, on the contrary, be single men, TAXING GUNS .- Brooklyn, March 15th .- Editor Should they be matrice uner, for their wife's and child-ren's sake I should tell them, sell your guns and give up shooting. Should they, on the contrary, be single men, for their boarding-house keeper's sake I should tell them, do the same thing. As long as we are after devising some means for the protection of game, let us by all means devise some ways for the protection of the poor sportsmen, but in the meantime do not let our senti-mentalism run away with our object in view.

sportsmen, but in the meantime do not let our senti-mentalism run away with our object in view.

A TRUI LOVER OF THE SPORT.

N. B.—In your last issue I notice that a party of gun-ners started at Bay Ridge some twenty-five woodcock, May I, through your paper, ask of those gunners one or two pertinent questions? What business did said party of

I am told that the following evening a prominent politician of Brooklyn had woodcock for his supper, furnished by some gunner. Whether said gunner was of said party I am not positive. Would it not be well for our shooting clubs to employ a detective to watch a little those Bay Ridge gunners?

Game Bag and Gun.

GAME IN SEASON IN MARCH. Heres, brown and gray. Wild duck, geese, brant, etc.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fo "Bay birds" generally, including various species of ployer, sand piper, saipe, curlew, oyster-catcher, surf birds, phalaropes, avo-cets, etc., coming under the group Linacoles or Shore Birds.

GAME AND FISH DIRECTORY

In sending reports for the FOREST AND STREAM Directory to Came and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of necess; Hoel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

LONG ISLAND DUCK-SHOOTING .- We add to our reports, published last week, the following note from Pond Quogue, L. I., sent by Mr. M. Williams, of the Bay View House :-

View House:—
It promises to be very good shooting this spring, as there are more ducks in the bay now than there have been for some years past; more redheads than broadbills. Brant and geese are coming into the bay now by the thousand. I never saw redheads so fine as they are this spring. Sportsmen who would enjoy a few days good shooting should improve the opportunity now. L.J.

MONTREAL GUN CLUB. - At a meeting of the above club MONTREAL GOV. CLUS.—2 a meeting of the mody club held Tuesday, 2d inst., the following were elected officers for the ensuing year:—President, Col. F. Bond; 1st Vice-President, F. X. Archambault; 2d Vice-President, Peter McKenzie; Secretary and Treasurer, A. G. Rudolf; Committee, C. J. Allway, V. S., P. E. Normandeau, R. A. Allan, and efficers of the club; Captain, Robert

Blackwood.

New Jersey Snipe.—Lake View, N. J., March 11th.—
I killed a Wilson snipe here last Saturday, March 6th.

Killed a pair of teal duck on the lake the day before.

Ben Phillips.

SOUTH SIDE AMATEUR GUN CLUB.—PIttsburg, S. S., March 10th.—The South Side Amateur Gun Club, of Pittsburgh, S. S., organized on Feb. 8th, 1880, with I'resident, Hy. Smalley; Vice-President, Joseph Ritz; Treasurer, Chas. Gaul; Secretary, F. J. Heinz; Executive Committee, Wm. Thomas and Otto Heinz. F. J. H.

SOUTH CAROLINA.—Chester, S. C., March 6th.—I never saw quail so plenty as here. One can go a mile from the town and start from one to two hundred in an afternoon. Myself and friend bagged forty-saven. We usually get from twenty to thirty in an afternoon. C. C. M.

Myselt and triend bagged forty-seven. We usually get from twenty to thirty in an afternoon. C, C, M. WILD PIGEONS.—North Vernon, Ind., March 13th.—Pigeons have been flying over this country for several months in great numbers. They roost in Scott County, thirty-five miles from this place, and have roosted there nearly every year for seventy-five years. The birds fly east in the mornings, feeding in the eastern part of the State and Ohio, and return in the evenings. Have seen none for a week past; but they will likely fly for some weeks yet. Have heard of only one trapper, a Mr. Fisher, who set his traps near Dupont, in Jefferson County. Do not think he has been successful. Quail season is from 1st of November till 1st of January. Not nuch shooting was done last season, as the season before many birds were frozen or starved to death. We look for good sport next season, as the birds increase so rapidly, and they have had no hardships to encounter this winter. We have only a few ducks on our creeks and ponds, and only an occasional one is killed. Fishing is fair in the season; bass of several kinds, carp, and a few other kinds of good fish, are caught in Muscatatuck, Big, Sand and Graham creeks. No fly-fishing. Largest green bass (light) from 3 to 44 jbs.

creeks. No fly-fishing. Largest green bass (light) from \$2 to 44 lbs.

Summer Woodcock Shouting.—New York, Murch 9th.—It strikes me that "Pair Play" is handling his pen in a very loose way. The pleasure of fall shooting does not consist alone in the mere act, of killing a bird. The soul of a true sportsman is also keenly alive to the beautics of nature, and a few hours shooting on a lovely day in October or November is better than a week in the usual cold and dreary weather of December.

But where is the objection to a special law for woodcock? I went to Morristown a few seasons ago to shoot partridges, and up to that time—Nov. 1st.—woodcock had been "numersome," but from that time scarcely a woodcock could be found in that vicinity. I admit that in some seasons they stay later; but as October is the woodcock month, and as he is the true sportsman's bird of America, let us have our chance at him while he's surely here. And let me add that if summer shooting is not profibited we will soon find woodcock a "scarce commodity." Any true sportsman would rather stop one rapid flying whistler in the fall than half a dozen in July, when they get up with the spirit of youthful owls and give the "shooter" time to wipe the perspiration from his soyes before they re out of reach. A young lady once told me that a July woodcock remind deler of a new-born baby, and she despised them. (A pair of trousers would have made her a sportsman.)

Didymus.

to \$1.50 per dozen. They could be sent to New York by the Mallory line of steamships; one leaves every week; oftener during the busy season. Major J. M. Brandon receives a large portion of the birds, is a reliable person, and will treat all fairly who may wish to deal with him. Mr. C. C. Pettit, the President of the gun club here, will also. I feel sure, assist sportamen to get birds. As to They could be sent to New York by

Where to go Next Wryter.—Philadelphia, March 6th.—I noticed in one of your February numbers an article from a correspondent calling attention of "lovers of sport" to the fact that Col. Allen, of Osceola, Fla., had recently launched a steamboat on Lake Topopekaliga, in Florida, to ply between that point and Luke Okeechobe ovia the Kissimmee River (400 miles). As that section of country is practically uninhabited, and virtually terra incognita to our sportsmen, and having spent the past winter in Florida, and having heard so much of that almost unknown region teening with game, and supposing that some of your many readers would like to know the great inducements it offers, I take the liberty of giving an extract from a letter from Col. Allen under date of March 3d.

I was struck with Col. Allen's idea of opening up that country to the tourist, and more particularly the gunner, for the sparseness of its inhabitants renders it a wonderful place for game of all kinds. Col. Allen writes that parties coming up the St. John's have the advantage of some eight or ten daily steamers, and that by landing at Brantley's Landing, or at White's Wharf, he will, upon a day or two advance notice, have ambulances to convey them over to Lake Topopekaliga, 35 miles distant, where they find accommodations with him on shore or boat. He

or two advance notice, have ambulances to convey than over to Lake Topopekaliga, 35 miles distant, where they find accommodations with him on shore or boat. He makes monthly trips, or as often as the necessity demands. Of course there are few points where sportsmen can find board or habitation in that section, therefore it would be well, if there are several in the party, to have tents or accommodation for camping purposes. At Port Kissimmee or Fort Bassenger board can be had from \$3 to \$5 per week. In the vicinity of Istokpoga the game is more plentiful than in any section of Florida. Deer and turkeys in great numbers, and bears plentiful. As an indication of the abundance of deer, he says on one of the five trips he has made, the mate of his boat killed four deer without moving from his position, and they all fell within 100 yards of his position (this was near Fort Bassenger).

LARGE VS. SMALL BORE GUNS.—Worcester, Mass., March 12th.—I was much interested in reading "St. Clair's" description of the different guns let has sowned, as given in a recent number of FOREST AND STREAM. For two years previous to last year I have used a 10 bore 30 inch burrel, 3! bls. Greener breech-loader, but as I did not care to lug around any extra weight exchanged it for a 78 bs. I dore, of same make. Now, this smaller gun throws shot equal in penetration and pattern to the larger bore, but thus far I cannot das a you shooting at a movine shot equal in penetration and pattern to the larger bore, but thus far I cannot do as good shooting at a moving object as with the larger grun. What is the reason? In firing at a mark or stationary object I can do as well with it at any distance as I could with the larger bore. The stock of the small gan has three-quarters of an inch drop more than the 10 bore bad. Would this make me shoot under? I do not like to give it up and go back to the large bore, for I fully believe a 14 bore is just as good in shooting qualities and much pleasanter to handle than a 10 bore, even for shooting coots. And right here let me say, I was with a party last fall duck shooting on Long Island Sound, and the one who got the most birds used No. 7 shot. How is that, ye sportsman who say that it is of no use to load with shot smaller than No. 3? I wish some of your readers could enlighten me, so that I can do better work with my present gun. No use to say the penetration is not as good, or that the shot is not distributed as evenly, for I have been all through that kind of experimenting.

JOHN,

The experience of others is in order.

The experience of others is in order.

INTO THE DISMAL SWAMP.

M ANY have heard, but few have seen, much of the great Dismal Swarup, in Southeast Virginia. With a view to ascertain something reliable about the prospects for fun and trapping, we lately made a trip there for that express purpose. Proceeding to Philadelphia, we took the J.W. Exerman, of the Clyde line, to Norfolk; time, on account of bad weather. Landing in Norfolk at midnight, we had difficulty in getting accommodations, but finally succeeded, and the next morning took the ferry to Portsmouth, and on the arrival of the bay line bent from Baltimore took the train on the Seabord and Roanoke Railroad, eighteen miles to Suffolk. At the steam saw mill of Manchester & Co., about two miles east of here, we made inquiry as to the best plan for a visit to Lake Drummond, and were directed to engage one of the swamp hands to convey us in by came on the visit to Lake Drummond, and were directed to engage one of the swamp hands to convey us in by canoo on the Jericho Canal, which runs directly from the mill through the swamp ten miles to the lake. As it was already past high twelve, we were anxious to get on our way, and Eli soon had together the complement of provender and cooking utensits, and, seated in his fine, large canoe, we soon were on our way, and before sundown had made six miles, which found us at the lowest camp occupied by "swampers," which locality Eli was familiar with, and we took up quarters for the night. Our shanty was well constructed out of cedar "boards," i. e., shingles about four feet long, not shaved, with a floor of hewed cedur planks. The roof extended well forward over the fire, which had the effect of throwing the heat on us as we Live Quall.—Giveston, Texas, March 9th.—I notice your domand for live quail. Although none could now be furnished from this point, the season for pairing-off being now at hand, a little information for those who wish to provide them the ensuing season may not be out of place. Some 10.000 live quail were received here the past season, the shipments commencing about Nov. 1st. The greater part of the birds come from Mexia, Kosse and Corsicana, though every little railroad station furnishes from one coop upward. When not too much crowded they generally reach here in good order, and sell from \$1

a man comtortably camping on the banks of the lake, where he had been spending several days fishing. The fish are generally cattish and multets, with a few perob. The lake is nearly round, and without a clearing or settlement of any kind on its border. Prentiss Duke formerly lived near the entrance of Jericho Canal, but several years since removed over to the higher land near the railroad. The lake is situated in the very center of the great Dismal Swamp, and is from five to six miles across, with an average depth of twelve feet. The water in the lake and canal of the swamp is of the color of strong tea, caused by the cedar and juniper timber which grows abundantly, and is not only found above ground, but beneath the surface, in the form of sound logs, which in places are being taken out for lumber of various kinds. We returned the same way as we went in, stopping again to camp in this dimal place, and in conclusion would say that we have been in many wild localities in pursuit of trapping, but in no place as wild as this awanny did we ever find fur-bearing animals so scarce. From evidence gained, we think there are quite a good many bears in the fall of the year, and a chance ofter passes through, with a sparingly few musikrats and coons. The lake has considerable fame, and many come from a distance to see it, but for a trapper we can find many places that will far exceed this in point of profit.

Shethal-BOENAL Dugdale, Pa., March 8th.

Was there ever a sportsman who has not at some time been allured into this sport? (if it comes within the vocabulary of sport, which I very much doubt.) I'll venture to assert there is no one, for the novely of the thing entices all who have an opportunity to indulge once, and not many of us, I think, will have any desire to repeat the dose. Last fall I made my debut in the coon-hunting arena. I was visiting a friend down in Virginia on a little hunting expedition, when, after gunning all day, my friend proposed a coon hunt for the night. I willingly filled into line, and off we started down to Uncle Sig's cabin to get him and his dog Sambo. Arriving at the door, we called him out and asked him if he would take us for a hunt. "Yes, dat I will, shure." Shortly he reappeared, equipped for the tramp in sheepskin pants, high-top boots and a coon-skin cap, with the tail hanging down his back, and with him made his appearance a specimen of the canine species, which he soon told us was Sambo, the master of ceremonies for the occasion. The dog was an odd looking relic of caninity, which, like his master, had seen his best days. I judged, from his appearance, that he was part bull, but what the other part was I can't imagine. He looked as if it might be alligator.

After we had lighted our pipes we started, leaving it

like his master, had seen his best days. I judged, from his appearance, that he was part bull, but what the other part was I can't imagine. He looked as if it might be alligator.

After we had lighted our pipes we started, leaving it entirely with Uace Sile to pilot us. He said we must go "down to de swamp." So off we started for the swamp, a walk of about one and a half miles, Uncle Sile let a way. When we arrived at the swamp Uncle Sile let a let us into the darkest conglomeration of briers, brush, trees and water I ever saw, and on he went through the thickest part of the woods. We had not gone far, however, before the old dog struck a trail, and the way the old darkey whooped was very trying on sensitive nerves. Had I been in the Black Hills instead of the Dismal Swamp, I think I should have taken it for the Indian's war whoop, and been involuntarily feeling for my scalp to see whether it was on my head or in an Indian's hunting belt. Soon old Sambo had treed, "way up do swamp by de canal." And away went Uncle Sile into the forest like the witches in Macbeth, leaving us to grope our way as best we could. Finally we got to the tree, a large fire was built, and we commenced to look for the coon, but it was so dark that we could not see ten feet ahead of our noses. But Uncle Sile said, "He am up dat tree, shure; Sambo never tole ma a lie." So up the tree he climbed, while we stood around it with our Parker breech-loaders, waiting to get a shot at the coon; but we were doomed to disappointment, for he leaped off and was on the ground before we knew it. But old Sambo being on the alert was there to receive him, and challenged him for a fight, and of all the squealing and scratching I ever saw, that capped the climax. The old dog came out victor, and we started for home, and after surveying my dilapidated clothes and lacerated hands I conclude that it a desire for com hunting is one of the faculties that go to make up the sportsman, I beyond a doubt am not one.

Charles County, Md., March 11th.

SPORT ABOUT SARDIS, MISSISSIPPI.

SARDIS, MISS., Feb. 16th.

AM sorry to say we have no shooting club here (wish we had). I have tried to get the sportsmen of this place to organize a club and buy trap and balls, but it seems that they fail to see where the "sport would come in." I am going to buy a trap and balls myself, and I think when they once try their hands at the glorious work of shivering glass in the air they will come around. Hunting is not very good just immediately around Sardis, but by going out five or six miles, a day can be passed in the field very pleasantly, and sometimes pretty agood bags are brought in. If a person wants to try his just of the property o

we retired first having interrogated Mr. Goodwin as to we restra. Its a faving interrogated air. Goodwin as to the most fatal spot or place about bruin to froe at. Oh, I tell you, my good friend, we could fairly feel the fatigue of siumbling through the cane, dragging a "bar" we had killed. We were up betimes, and so eager to get to work that

of stumbling through the cane, dragging a "bar" we had killed.

We were up betimes, and so eager to get to work that we could hardly wait for breakfast. It took but a short walk to bring us deep in the tall, dense cane surrounding the lake. We were told that bears had certain places to cross a very dim road that led to the lake. I was the first to be placed at a crossing. Tom was placed at the next best place. Mr. G. and the seven hounds made a circuit of about a mile to drive for us. Soon Thened the "music" far away. I held my breath and listened; sure they were coming nearer; still nearer they came. When within about 500 yards of me I took off my overoat, examined my gun, got my knife convenient, and waited in breathless suspense. Just about then I heard a twig crack a little to my right. In an instant my gun was cocked and almost to my shoulder; then came the dogs, and passed about fifty yards to the right, where I had heard the twig smap. Soon Mr. G. cane up, asked if I had seen anything. I told him I had not, but heard a twig break just out there. He said he had started either a panther or a cat, was not certain which, and the dogs were still after it. They were soon out of hearing and we could not get them back until near noon. We had missed the golden opportunity; it was then too late to start another that morning. We called Tom, held a jolly consultation and finally concluded to go on to the lake and short nap, we went for the ducks at a lively rate. Within about two hours we had baged eistreen, when our small shot gave out. By this time the sun was nearly down.

Again we started for the haunt of bruin. We could hear the wolves howling; so did the dogs, they knew too well what it all meant—"they had been there before"—and with all the coaxing and scolding we could do, not a single hound would leave our heels. The dogs were atriad of them. The wolves would cone up so near that we could hear them groun, but the cane was so dense that we could hear them groun but the cane was so dense that we could hear th

SHOOTING MATCHES.

In sending scores, Secretaries of clubs are requested to give details of trap, distances, etc.

New Haven vs. Wallingford. New Haven, March 10th.—To-day, being the regular day for the medal shoot of the New Haven Gun Club, six of the Wallingford team came down and shot a friendly match with six of the New Haven team, as follows:

ESSEX VS. JERSEY CITY HEIGHTS .- The return match between ISSEX VS.JERSEY CITY HEIGHTS.—The FOURTH matter between the Essex fun Club, of Newark, and the Jersey City Heights came off at the West Side Driving Park on the 10th inst., and proved one of the most interesting matches of the season. The former match between these crack clubs, it will be remembered, took place under the rules of the Essex, at Newark, and resulted in a tie-97 birds each. It did not so result on this occasion. As one of the Heights' boys remarked, "We met them, and we are

theirn."

The weather for the first part of the contest was very unfavorable for good scores, a bitter cold wind blowing from left to right directly across the traps, made it impossible for the shooters to stand any length of time without becoming benumbed, and when stant any long in the writing becoming benumber, and when the birds got up, they went down the wind like small streaks of electricity. But what was singular, the old shots succeeded in grassing in most of the difficult shots, but failed worfully in the incomers, or easy ones. The Sheriff was peculiarly unfortunate; incomers, or easy ones. The Sheriff was peculiarly unfortunate: but explained the matter, with the information that he had to take some prisoners down to Trenton, and they kept him busy all the night before. Dr. Burdett also had a night case, and Dr. Cole had been laboring hard getting two men appointed on "the force." Thomson thought some one had drawn the shot from his cartridges, while McCord know his shot opened all around the birds. The fact was, while the Essex had rather the easiest birds, espe cially were they so formed toward the last when the wind died away, they shot magnificently, and the Heights boys own up squarely. But they are far from satisfied, and yet believe they have the metal and nerve in their ranks to wrost the victory from Newark; and when they get their new grounds in order close by the watch factory, they propose to send another "invite." The following is the score:-

| At the close of the shoot | ing, about 5 o'clock, the Essex boy |

At the close of the shooting, about 5 o'clock, the Essex boys were escorted to the club-room of the Jersey City Heights Club, were escorted to the club-room of the Jersey City Heights Club, where an ample lay-out was ready for some seventy-five as hungry individuals as standing four hours in a March wind could naturally make. The supper was got up under the supervision of Geo. Osborne, who many will remember as a cateror of note among the celebrities of Jersey City. George is a member of the club, and he fairly throw himself on this occasion, as the high encomiums pronounced amply testify. After doing justice to the solids, and liquids in a mild form had circulated sufficiently, Dr. Cole, presiding, arose and proposed the first toast: "In Essex Gun Club—Gentlemen shooters all," and three cheers and a tiger were given with a will. Toasts and speeches full of humor followed in quick succession. Where there were so many and so good, we cannot Succession. Where there were so many and so good, we cannot discriminate; but can only mention among others Dr. Pindell Harys, You Lengerke, Pense, Brentaul, and another gentleman from the Essex whose name we failed to get. He, though rather small in stature, was so brimful of humor, and got off his say in ch a rollicking way, that he never failed to bring out the cu hu-sm of the entire party. Replies were made by Drs. Burdett.

Cole and Henry, M. T. Newbold, Thomson, Headden and others At an early hour the Essex boys took their leave, expressing, as we believe, the wish of all that more of these friendly contests among clubs may take place in the future.

ERB-BOGARDUS PIGEON MATCH .- St. Joseph, Mo., Murch 11th. EIR-BOGARDUS PIGEON MATCH.—St. Joseph, Mo., Murch 11th.— This match, which was for a jurse of \$200, was short Thursday, March 11th. The conditions of the match were to shoot at 100 pigeons each, from 5 ground traps; 12-bore double guns; the use of both barrels I ounce of shot; Hurlingham rules; Erb to stand at 28 and Bo-gardus at 30 yards. Bogardus used at 25 bore choke-bore by W. & C. Scott & Son, 65as, carage lightning No. 7 powder, No. 9 shot in his first, and No. 7 shot in his second barrel. His gun weighs about 10 pounds. Erb used a gun of similar weight, made by James Purdy & Sons, London. His shells were loaded with 4idrs, Hazrurny & bons, London. His shells were leased with 4-thes. Hazard powder (see-shooting, ducking size), and he used Chicago No. 6 shot in both his first and second burrels. That Mr. Erb—who by the way is strictly temperate in his habits, and only nincteen years old—should have beaten the acknowledged champion by 10 birds will no doubt be a surprise to many, as his score is also a good one. Following is the official score-

Weather cold and windy, the wind blowing from the right to the ft across the traps. Time of shoot, 3 hours 5 minutes. Paul rancke, referee; B. F. Buzard, scorer. Birds marked * were killed with the second barrel.

The Rifle.

THE "PALMA" CONDITIONS.

THE Board of Directors of the National Rifle Association met the Roard of Directors of the National Ribe Association fine to Tucsday afternoon last, and considered the question of changing the conditions of the Palma match in accordance with the views expressed in the Forest and Stream of last week.

the views expressed in the Forest AND Stream of last week.

Col. Gildersleeve presided, and among the directors present were Messrs, Shaler, Donaldson, Litchfield, Fulton, Waters, Scott, Schermerhorn, Cowperthwalt and Grant. Col. Bodine was chosen a director to fill a vacancy, and Gen. E. L. Molineux, of Brooklyn, also in the same manner.

Major Fulton wished to have a note sent to the Scotch and Trish teams asking their views on the change; in the Delive accession.

Major Filton wished to have a not sent to the Scotca and Frish teams, asking their views on the change in the Palina conditions. This was opposed by Col. Cowperthwaite, who wished immediate action, that a match might be brought about this year. Col. Bodine said that a notice to the Irish team might bring a protest, and then to proceed to act in the face of such a reply would be at least discourteous. If the power to change lay with the N. R. A. of America, and no not account to the face of the second to the second and should be without asking opinions of any one. Col. Gilder-sleeve said that in truth the old match had lapsed by the failure of those originally invited to take part, and the problem now was to make such new conditions as would insure a continuance of the matches. It would not do to allow the Palma to lie by and rust, and now the time had come to take a new departure.

and now the time had come to take a new departure.
It was finally resolved to place the matter in the hands of Major
Fulton and Cols. Schermerhorn, Scott, Story and Litchfield, who
will draw up new conditions in accordance with the following
preamble and resolution offered by Col. Wingate, and unaniously passed:

Note: passes:—
Whereas, More than two years have elapsed without a compebloof for the international trophy known as the Palma, and no
ture contest for it under the existing conditions seems problog and

and an experience are offered this association that the com-ions, which have proven so advantageous to rifle shouting, be continued if the conditions of the match are changed so as trink Great Britain to be represented by a single team; it is force.

therefore. Resolved, That it is the opinion of this Board that the conditions of the match should be changed so as to insure its continuance, and the committee having charge of the matter are requested to propare such a modification of its terms as in their opinion will best serve the interests of file cheoting by a continuance of these them the such as the state of

In concetion wish the discussion of the Palma conditions, the following expressions of opinion have been received from men who have taken part as successful competitors in the contests for

the trophy. They of all others have the right to speak their minds on the question under consideration, and there is a ful unanimity in their cry of "come on" to their British riva

ful unanimity in their cry of "come on" to their British rivals.

"Old Reliable" asys:—

"I beg to say that until quito recently I have felt reluctant to consent to a modification of the rules governing the contest for the Palma, for reasons previously entertained by many members of the Association. But the apparent impossibility of obtaining a match in the future, togother with the failure of the past two years, has convinced me that it is now expedient to so after the rules as to meet the wishes of the National Rifle Association of Great Britain, in which case I have the assurance that the con-

the result be resumed.

"The directors of our Association have this matter under consideration, and I am held to believe that the change will be offected at an early period, but I fear not in time for a context this year.

Were truly yours, JOHN HODINA."

Mr. Rathbone, who has served on two teams, says:—
"I can see no valid objections to the change in the condition

"I can see no vanic objections to the enable in the conditions of the Pulma match which you suggest. I think it is the wish of American long-range riflemen to have the strongest possible foreign representation in the future contests for the Pulma. The two past years, much against our wish, we have had no team from a foreign country to need, and we sincerely hope that 1880 may not pass the pulma the past years. eign confine of metal competition. During the past two years a visit from any or all four former competitors would have been most welcome. I believe the position of the British N. R. A. to be logical and correct, and I also understand that the American N. R. A. have the subject tunder consideration, and I doubt not will come to the same conclusion, and, I hope, very soon, if it will be the means of a British team coming to see us this year.

"Truly yours, R. RATHBONE."

J. S. Summer, with the best long-range record in the world, is auxious for another of his quiet squelchings of the Britishers, and remarks:emarks:— "I have read your editorial of last week with much interes

"I have rear your entorial of last week with fitted interest. You have presented many good reasons why the conditions should be changed. It does seem us if it was the only way to bring about a match. They have said so much about it, their pride will certainly bring them here if the conditions are changed.

"Yours respectfully, JOHN S. SUMMER."

Mr. Isaac L. Allen is as pungent as ever, and shows that he is in good fighting trim, by writing to the Editor of FOREST AND

STREAM as follows:—

"You will please pardon me if I decline to offer any suggestions as to the advisability of changing the terms relating to the Palma trophy.

The members of the teams of 1876 and 1877 once thought they were entitled to some consideration, but soon found themselve were entitled to some consideration, and, so on communicated status upon; any suggestion from them being entirely ignored. My opinion is, that if the Board of Directors of the N. R. A. wish to have the terms changed, said terms will be changed, as they have been before, without reference to any suggestions from "Yourn respectfully," ISAAC LALLER."

"Yours respectating,

Col. Clark, of Poughkeepsie, who was on team of 1878, a'ds some guggestions for the conduct of a team match. He remarks:

"While I am in favor of modifying the conditions of the Palma match so as to admit a British team only, I am also in favor of doing away entirely with our present American Team system, and, to speak plainly, I believe there is no one obstacle so much in the way of bringing about an international match as our presents. on the way of tringing about a contribute of the cent system of team coaching I would place each man of the team entirly upon his merits, and if necessary allow no person to have intercourse with him during the shooting. We have had enough of the American Team system to test the quality rifles. Now let us test the metal of our marksmen by placing each

rifles. Now let us test the metal of our marksmen by placing each man of the team upon his own responsibility. This system would bring together our best shots, and I have no doubt that a match on this system could be arranged with our British friends.

"It has been said that such a man is not much of anindividual shot, but he would give himself up to the conchand would make a good tenuman. Wby not allow him to do all the Bring if be be a good trigger puller, and leave the other seven to adjust his sight and instruct him when to pull? Is it not almost a pity to use such men on a team, for if a big score be credited to them we never hear of them after. It may be remembered that in the "Spirit of the Times" match, which occurred a few days after the Palma match, the British eight scored quite a number in the "Spart of the Times" match, which occurred a rew days after the Palma match, the British eight scored quite a number of points more than the American eight in this match. There was no coaching allowed. If our rifles are superior, what reads such a wide difference in the scores of this and the Palma match? I believe it is a matter yet to be decided which are the superior marksmen. H. F. CLARK.

Capt. L. C. Bruce is working with vigor for receiving the atten dance of a British team here this year, and Capt. W. H. Jackson, the captain of the last American Team and the present holder of the trophy, says he will write more fully in a later letter and re-

marks for the present:"I am pleased that you are making an early move. I will write affew lines for the Forest and Stream. We must all do some-thing to stir up an interest in long-rangeritle practice. I do not know that we will get the Englishmen over here. Whatevor we may do, we can take away any excuse upon their part."

Prof. Chas. E. Dwight writes from Wheeling. West Va.:—
"The proposed plan of future competitions for the international rifle matches for the trophy Palma, as proposed in the last issue of the FOREST AND STHEAM, meets with my hearty approval, and seems to me to be fair and just. The adoption of such a plan could do nothing to make an international contest more remote or improper than it is at the present time. Whether long-range shooting owes its lethargy to the want of stimulus of these international contests, or to the fact of the sport being so largely participated in by professional shooters, maintained by our enterprising manufacturers, is a question which if debated might cloid a variety of opinions.

"No one would be more pleased than investif to see an internaissue of the Forest and Stream, meets with my hearty approval.

"No one would be more pleased than myself to see an interna-"No one would be more pleased than myself to see an interna-tional context. I have thought the best way to secure them would be for the teams to visit the opposing country alternately regard-less of the result of the match. The entrance fees of the contess would, if given to the team go far toward paying the expenses of their visit the following year. It seems to me that this plan would tend more toward keeping the interest up in both coun-tries than the former manner of deciding the place for the contest to be held. It would also, I think, have a tendency to introduce American arms into the country visited by the American team. "Yours truly. Chas, E. Dwight." CHAS. E. DWIGHT "Yours truly,

Your admirable editorial in last week's Forest and Stream is so conclusive upon this question that little remains to be said.

I am decidedly if arvor of making it a truly international match.

The title is now a misnomer, and, besides, the conditions are unfair to us, for while we can put only one team in the field Great

Dritain is allowed something like a dozen; for if Canada, Scot-

land, Ireland and Australia are admitted, there is no reason why acch principatty in India, South Africa, etc., should not be represented. In the past our superiority in guns and drill has been such that we could stand this, but now England is initiating our rifles and ammunition, and will meet us next time on more equal. terms. Yours truly. FRANK HYDE.

RANGE AND GALLERY.

MASSACHUSETTS -Boston, March 13th.-There was a large gathering in the "winter shed" at Walnut Hill range to-day, the atering in the "winter shea" at wainut IIII range to-day, the attraction being the tenth competition in "everybody's match." The day was not just what a rilleman would have selected for the scoring of an extraordinary record, but, in spite of the many disadvantages that the elements threw in their way, a large number of the competitors succeeded in repeatedly finding the buil's-eye, of the compeniors successed in repeatory mong the man seeks, and adding some line scores to their previous records. The Jights and shades were fair, but the wind was unsteady and vacilitating, ranging from northeast to east in direction and from one-half occasion one-half points in intensity. Captain Jackson, with his Sharps rille, government model, loaded with government amount amount of the property of the pr Sharps rille, government model, loaded with government ammu-nition, which he binsself loads, leads the van with a hund-some 48; F. Brown 43, and H. Tyler, 42, with the same class of rille. Among the marksmen who practiced with sporting rilles, W. Howard ranks the highest, having started off with a four and finishing up with nine "centers," making the handsome score of 49, which, taking the weather conditions into consideration, was an extraordinary performance. There were 100 entries at yesterday's meet, and appended are the highest scores muter.

Charles, J. F. Brown and H. Tyler, all of whom used military rifles, are entitled to two more points on each of their scores than appears in the table above.

Boston-Mammoth Rifle Gallery .- The second week of the Con-Roston—Manmoth Rifle Galtery.—The second week of the Consolation Rifle Match has shown some wonderful shooting in the first class. Mr. W. H. Harrison takes the lead with a 40 and two 30s. The management announce that a new rule is adopted for hereafter in cass of ties; it is as follows: When the contestants have been notified to appear and shoot off the tie, and fail to do so, they reliquight all claim to shoot off, and mu, taceept the prize in order after the other contestants who do appear and shoot. For example, last month there were three ties for the first place; if two should appear they take the first two prizes, leaving the third one for the ubsentee. This rule is to be strictly enforced, and the management hope all will govern themselves accordingly. The following is the standing of the several competitors to date 150 feet; rounds 8; possible 40:First Class.

WHAT A HUNTER KNOWS.

BOZEMAN, Montana, Feb. 28th.

'Hunting Rifle's " query in issue of Jan. 8th, the Replying to "Hunting Rifle's" query in issue of Jan. 8th, the weight of the 40 caliber hollow-pointed bullet to which he refers weight of the 30 centure tools or should have been 192 rs. instead of 100 grs., as the types had it. It was thought unnecessary to correct the error, the proportion of powder to ball given (I to 2.88) sking the true weight. If he will send his address to Walter Cooper, gun dealor, Bozeman Montana, he will send him a lot of the balls for trial in his riske, it. Montana, no will send after all of the deals for that it may not be is a patched ball, and of sufficient taper for a good hunting ball. On account of pecularities of calibor, growing, etc., in different rifles, a ball that files from teom one rifle will not necessarily if true from others nominally of the same calibor. The Winchester, 44, cal., of instance, is not, 1 think, more than 42 cal., and a with other rifles. This ball is gotton up for a Sharps rifle, and from witnessing its shooting up to 200 yards I believe it a properly shaped ball. Mr. Cooper has also gotten up Express moulds for 44 and 45 cal., patched balls modeled from standard English balls, and I am told by those who have used them they

The experiences of an expert rifleman like Mr. Rabbeth at the The experiences of all expert inclaim like of . Another a care darget are very valuable—more so than a large quantity of theoretical trash and nonsense that so often, perhaps unavoidably, encomber sporting Journalis. Results are sometimes obtained at the target that puzzle experts, but they should not be east saide without due consideration. My experience differs from his in one or two particulars, more especially as to the necessity of the lubricant wad. With the patched ball I understand that all the Individual with the patient shall inderstant that in the targeting reported was done without wiping, and, with the excep-tion of the first few rounds, without a labricant wad. My own experience with the patched ball, and without the labricant, is that it soon loses its accuracy in successive shots, unless wiped after each discharge—the patch stripping off, the rifle's leading after each discharge—the paten stripping on, the first seating and want of accuracy necessarily resulting. This uppears to be the experience of ride makers both in this country and Great Britain, as it is understood they all invariably use a lubricant wad of becawax and tallow or sperm oil with the patched ball. I understand also that most of the British ritle makers use a patched ball

stand also that most of the british thie massive also a parameter out in the Express rifle.

Mr. Rabbeth reports only one experiment with an Express ball — a, 45 cal. Canollured ball for the Sharps rifle—making a group of sixteen inches at 200 yards. That, in my opinion, is about as good a turget as is usually made by any solid Canellured naked ball at e and should not be an argument against the accuracy that distance, and should not be an argument against treacour of this particular ball. I doubt the practicability of swedgion hollow-pointed ball, yet they are comparatively so light that difficulty should exist for casting them without flaws.

Had Air, Rabbeth obtained from the Sharps Company balls from musts. Randow to that can be shaded by that company for me in 1876 (44 cal-moulds ordered and made by that company for me in 1876 (44 cal-patched and 275ers, weight), he would have found them all the could have desired as to accuracy, and all they should be as to destructiveness. It was modeled from an English butl, except it has much more taper.

There are several objections to the Sharps .45 cal. Canellured Ex-There are several objections as the shall for hunting, on account of superior accuracy. In the second place, the point seems too blunt. I think a ball with an orifice in the point more than three-sixteenths of an inch will lack accuracy. It has a 22-inch three-saxteenins of an incu will inch accuracy. It has a 22-incu
orifice. Thirdly, the explosive cap in the orifice is danagerous to a
certain extent, and, in my opinion, superfluous. With the proper
velocity given the ball, and without the explosive, it will, of its
own velocity, expand or explode at the proper time—to wit, after
entering the animal—and with as much or more destructiveness as with the sylvair classred. Moreover, a twig is likely to explode it before striking the animal. I consider the insertion of a copper tube in the end of the bullet, where of no greater diameter than three-six is entirely and the think in the case of the bullet, where of no greater diameter than three-six is entirely and the time than three-six is entirely with its expansion and destructive.

Thave now used the Express ball from an American breech I have now used the express ball from an American broccul-loader (the Sharps) for two years past, having used the solid ball for the two preceding years. My prejudices (caused by too much being claimed for it, in my opinion, by those evidently inexperitowing taining to mere against its merits. Mr. Hight's opinions, however, caused me to give it a trial, and after experimenting to find a ball of proper weight to suit my rifle, and then using it. For two years on antelope, deer, elk, grizzlies and mountain sheep, I have no heelitation in saving that, for hunting purposes, it comes up to the standard claimed for it by the Irish riflemen. A refer up to the standard claimed for it by the Irish riflemen. A reference to my note-book shows that during the season of 1878; of twenty-nine deer and antelope known to be lift fairly in the body between shoulder and hij (nineteen of which were "paunch-shots"), five required a second shot, or one in nearly six—charge, 60grs. C. & H. No. 6, and 275grs. ball. For bear, a 83grs. hollow-pointed ball was used; but the powder was insufficient for a proper velocity, and the results were unesatisfactory. During the season of 1879, of twenty-four deer and antelope hit fairly in the body, only one required a second shot, one in twenty-four. Of thirty-four clk and mountain sheep hit fairly in the body, six remarked as second shot, one in five and two-thirds. Of clight hears quired a second shot, one in five and two-thirds. Of eight bears quired a second soit, one in the and two-tunies. Or logal nears killed (seven grizzlies), only one required a second slot. This record does not hielde animals known to be lith in the limbs— some of which got off. Charge used, Jogyrs, C. & H. No. 6, and 275grs, ball for deer, and 30grs, ball for bear and clk. This last ball, made by boring out a 35grs, ball, produced very sutificatory bull, made by contribute a sagra, and, produced very sutristatory results, as the record shows, though it is a little beavy for the powder, and has not quite taper enough for firing consecutive shots without wiping. The more favorable results for 1870 arise from using more powder, and probably placing shot more carefully—the "wire-edge" of the sport having probably worn off.

During 1876 and 1877, of about seventy deer and anteloop hit

with the solid ball, about one-fourth required a second shot, and

with the solid ball, mout one-contra required a second shot, and about one-lail of the elk and bear. In those days, however, a bombardment was kept up on a grizzly as long as he kicked. In the successful use of the Express ball, a strong and mod-erately quick powder is necessary (such as C. & H. No. 6). As an evidence that my ophison is distincteated, I will state that the powder I am using cost \$3 per pound (mostly from mistatic of the shipper), and would still be used could it be had no cheaper, us it is superior to any other brand to be obtained.

In conclusion, I would advise "Hunting Rifle" to depend upon

his own experiments in the solution of rifle or ammunition. If he contemplates limiting larger game, this experimenting will familiarize him with the powers of his own ritle, something essentially necessary for a successful hunter. If the thinks of using the Express ball in his 40-caliber, I advise him to have it chambered for the 90-grs. shell. BEAR-PAW.

Feh. 28th.

Arghern.

BOXTON NOTES.—Archery has taken a firm hold here, and before July I hope to see half a dozen more clubs springing up in and around the "Hub." The expected match between New York and Boston gentlemen, which is to take place in May, is much talked of, and there is considerable curiosity to know who the lucky ones will be who are to represent Boston.

Before many weeks we shall probably form a club to be known as the Boston Archery Society. This society is for the encour-agement of archery in this section, and we shall probably meet once in two weeks. A private practice club for the encourageonce in two weeks: A private practice duit for the encourage-ment of long-range shooting is also talked of, some of the rules of the present P. P. C. not seeming to said us Eastern archers exactly. During the coming season we shall probably shoot a great deal and have some matches.

LANCE WOOD.

—The Robin Hood Archery Club of Nyack, N. Y., is selecting a

team for the coming campaign. The club has some seventy-five members, and good work may be expected from it next summer

CORTLAND ARCHERY CLUB.—Cortland, N. Y., March 13th.—The following score was made by the members of the Cortland Archery Club at Van Bergan Hall; 20 arrows; 30 yards:—

MANHATTAN BOWMEN.-This new club has been organized in BLARATER BOWNER.—This new Gittle mis been organized in this city, with the following officers:—President, D. M. McLean; Vice-President, W. C. Beecher; Secretary, J. O. Davidson; Treas-urer, S. E. French. The members practise in the Ninth Regi-ment Armory hall, sharing there the privileges of the New York club.

-In the current number of Harper's Bazaar appears a page —in the current number of marger's basian appears a page drawing from the pencil of an artist, whose truthful character sketches last fall of the Eastern Archery Meeting at Boston were enjoyed by the archery fraterentity everywhere. The picture represents a seen in the Ninth Regiment Armory, during a Saliurday night practice shoot of the New York Archery

Club and the Manhattan Archers-these two clubs having shot unically together shee their organization. We recognize in the picture many well-known members of the two clubs, and not only are the likenesses there, but also the individual manner of

A lover of the bow himself, the artist has faithfully rendered all those little details of the archor's outfit, which gives the nicture

those little details of the archer's outfit, which gives the picture an added value to an archer's eye, rarely accorded to drawings by those not "up" in archery

Mr. Davidson is doing much with pen and pencil to give these ont conversant with archery truthful representations of how this heathful and pleasant sport is carried on.

"ROUNDERS" IN ARCHERY.-New York, March 18th.-The New York Archery Club of this city has passed a resolution excluding nombers of all other archery clubs from membership. This they claim will prevent any claims of other clubs to a share of the honors to be wen bereafter. This resolution will no doubt ac complish the desired effect, but will it not exclude many desira ble members and keep the club in the background during the summer matches BOUNCED

The New York Club have based their action on very sound and sufficient grounds, and in sotting their faces against what are known in other sports as "rounders" have taken a com-mendable lead. It is possible, however, that this action of the mendanne teta. It is possione, nowever, that this liceton of the club is premiature. Archery is yet in its infancy; clubs are fuw in numbers and weak in membership, and it may for these reasons be advisable to wait awhile before drawing the lines too close. In inter-club matches it is plain that where a member of many clubs shoots against one of his own clubs, the credit of the view. camps snoots against one of his sown times, one treat of one vac-tory is decidefully complicated and dubious. This, it strikes us should be provided against, and it may be provided against with-out totally barring members of more than one club from all the club privile ges of each. An archer might belong to one club with which in all inter-club teams he should shoot. At the same time, he might be allowed the privileges of a semi-honorary name, he might be anowed the privileges of a semi-mortaly nembership in other clubs, or a membership with occitian well-defined restrictions, which should yet debar him in no wise from a full participation in all club contests and privileges. We should be pleased to hear from some of the older archers on this quos-Let us arrive at the middle course, which will be the safest and most progressive for archery to pursue.

Deferred.-Several interesting and timely communications have necessarily been deferred.

Dachting and Canocing.

IMPORTED YACHTS.

A Syachting on the lakes takes stronger hold upon the masses the desire to import craft of foreign build from Cuthbert's yard at Toronto, the best-known builder in the West, becomes more manifest. It has been an open question as to what status in the eyes of the law the imported yachts could claim, and nuin the cycs of the new the imported pachs could chan, and he incrous have been the inquiries we have received of late seeking to unrayel the mysteries of our wonderfully complex and pecu-liarly stupid Government exactions in this respect. As long as our barbarons tariff and Chinese exclusiveness hold sway, our our paroarous tariit and Cannese excusiveness noit sway, our Lake readers, ambitious of owning Grephounds and Inas, must bow to the decisions of vae propuli and the powers that be. We have received, through the kindness of the Secretary of the Treusury, the following authoritative announcement, an observ-ance of which virtually denies imported yachts over twenty tous the right to fly the American flag, and compels them take papers, etc., from the Old Dominion, hall from abroad and sail under the protecting Blue of H. M. colonies of the North. We add that yachts under twenty tons can be imported with impunity, as our legislators in their wisdom refuse to take notice of olippers under the mystic figure of twenty, and class them simply olippers under the mystle figure of twenty, and class them simply as 'manufactured wood,' which, once in the country, come into the same category with skiffs, punts and boats, and require no papers of any kind, unless cruising in foreign waters, when a fisherman's or a coaster's license becomes a necessary adjunct to escape interference by revenue officials abroad. As there is a duty on "articles manufactured of wood," yachis under twenty duty on "articles manufactured of wood," yachts under twenty tons should be sailed from the Canadian yach so fuler birth into our harbors in a bond fide manner, when they will circumvent paying duties on the same grounds as a suit of clothes worn on the back. It would seem as though the time had come for an entire revision of the laws passed by Congress relating to yachts. We hope that influential persons interested will step to the force and demand about five minutes' attention to the matter at the hands of our represensatives, who can have no earthly objection to an overbauling and simplification of laws originally intended to foster the construction and sailing of yachts, but which have long ago become a drag instead of an nid to the object sought. With the assurance that the revision is asked not in the interests long ago occorie a drag instead to act not need so sought. With the assurance that the revision is asked not in the interests of an onslaught upon Uncle Samu by rod-handed plutters, nor yet with a ylew to starving lim by nursing contraband trade, oven the most suspicious and conscientiously tender legislator may so far relax his protective hobbies as to grant the small boon asked. a sport which has attained a growth sufficient to demand ional recognition. The following is the letter received:

The following is the letter received:

THEASHIN TORALTHENT, CHEMICARY, CHEMICARY, WASHINGTON, D. C., March till.

Editor Forest and Stream :-SIR-Relating to yachts of over twenty-tons burden, of foreign uild, imported and owned by American citizens, this Depurt ment desires to say, that a yacht of foreign build, of the burden mentioned, could neither be enrolled nor licensed as an American mensioned, count neither be enrolled nor needsed as an American vessel, nor be entitled to the privileges defined in Section 4,214 of the Revised Statutes, except by special Act of Congress. As to the right-of-such a yacht to carry the American flag, this

Department concurs in the opinion expressed in Article 226 of the

regulations prescribed by the State Department for the use of the Consular Service of the United States, which is as follows:

"The privilege of carrying the American flag is under the regulation of Congress, and the statutes have not made that privilege practically available to any ships, except those duly registered or excelled at any Conton House." enrolled at some Custom House.

Very respectfully, Assistant Secretary. MEASUREMENT.

Editor Forest and Stream :

Editor Forest and Stream:—
To my way of thinking, there is no one man or body of men than can figure up a just table of allowance. You might just as well expect them to figure exactly the weight of construction. In the first place, we must have every owner of a small yacht understand that they are to ballast their yachts to their own liking, and keep their ballast just where they put if in the first place, that is, not shift from side to side or end to end while under weign. This done, every tub will sit on its own bottom. I then would propose to do away with our tables of allowance. Make your classes of center-boards and keels, make them of sloops, schooners, cutters, yawls and sharpies. Give a man to understand that if he desires to go into the 26ft, class, his yneht must not be over that limit; if into the 38ft, class, not over 38ft, deek line, and so on lbuit: if into the 38ft, class, not over 38ft., deck line, as

limit; if into the Sift, class, not over Sift,, deck line, and so on until you arrive at the largest available yacht, even if it brings but two boats out for competition.

The judges have then not got to pore over a stationery store or work like clerks in some down-town shop; they will have to stand no censure about half inches, or split seconds, or the differ-The boat first across the line is the winner, if a ence of length. The boaturst across the line is the winner, it an anchor start, and also a winner if more than the time has elapsed between her and her rivids in a flying start.

As the table of allowance now is, two boats may be just as long As the table of allowance now is, two boats may be just as long on dock, the same beam and sail draft; one's stern may rake more, and she would probably got allowance on a few inches, Two beats are in the same class. By water line measurement one is 20ft, on deck, 10ft, beam and 21ft, water line; the other is 25ft, on deck, 10ft, beam, 2ft, 6in, water line. The smallest boat actually allows the largest by water line measurement at present in

vogue.

When men understand they can build so long, and are restrictedonly to fixed ballast, their pocket-books and fanor will determine which class their ambition lies in, and we shall see a more uniform size of vessels with more variety of rigs and models. It will also determine whether a sloop is better than a outter, or enters botter than schooners, etc. "Every tub will sail on its own bottom." Never consent to put a shifting ballast boat against one that keeps hers under the floor. Kedor.

Buston, March 5th.

Hoston, March 5th.

We object altogether to any measurement by length for reasons set forth in these columns. We also take exception to the child's play of allowing so many minutes to cross the starting line. It tobs a race of its display of seamanship and skillful maneuvering All of a class should start at one gun, and their times be taken After the gars should sear the graph; the subject the state of the garden to the garde seration rules with this and thinks should be done away with wherever possible. Vacht racing ought to be graduated out of haymakers' leading strings. In relation to shifting ballast among small boats, our correspondent has a clear head.

NEWPORT "CATS."

Editor Forest and Stream :-

A good many years since, further back than I somotimes find it pleasant to look, I noticed at Newport, R. I., the finest fleet of small sallboats it had ever been my luck to see. They were all of them est-rigged, with short booms and high, narrow-headed them ext-rigged, with short booms and high, narrow-headed sails; were time sen bonts, sure in stays, and every one of them was a keel boat. Their owners were practical men, who galned a living by taking out sailing parties, and they understood handling their boats to perfection. I often talked with these men about center-boards, but it was no use; they considered their boats perfect, and that the keel was what made thom so. Now, however, the visitor to Newport will tind all this thing changed. It is no difficult at the present day to find there a keel ent-boat as it was twenty vears ago to find a center-board. it was twenty years ago to find a center-board.

Solve the riddle, mon ami, and What has caused the change? What has caused the change? Solve the riddle, mon and, and if you can't, pass it on to some of the cutter fraternity, who, instead of using their brains in improving what is good, are attempting to introduce something that has been thoroughly proved an inferior article. After Messrs, Cutter & Co, have given up the conundrum, we can accommodate them with still another OTT VIVE

We certainly take a very different view of a perfect from what our correspondent seems to set up as his standard. The Newport cat-boats we consider without question the embodiment of the very worst elements a yacht can possess. They are exceedingly dangerous when fully rigged, very hard on their belons, excessively wet and uneasy, very apt to miss stays in lumpy water, cannot sail close on account of their great host and narrow head, permitting the gaff to fly broad off when the boom is trimmed force. permitting the gair to hy broad out when the boom is frimmed fore and aft, and they are leewardly and very slow in rough water, to such an extent that we boxed about an hour in one of them trying to fetch a mark not an eighth of a mile to windward. They yaw frightfully, and with belin hard across the quarter will fall to answer till a favorable sea throws their shout again where it ought to have pointed right along.

If we desired deliberately to set about designing a oraft com-

bining all the worst qualities known we should choose something nning at the worst quarties known we should edoese sometting like the Newport cat as our model. Make these vessels of less beam, however, greater depth, add a keel and low ballast, less hoist and more gaff, and the result would show a boat which would be safe, easy, dry, comfortable to sieer, reliable in a seaway and closer on the wind. We think it high time that the way suid closer on the wind. We think it high time that the himiliating custom of taking our cus from smacknee, clam-dig-gers and the like gave place to a little more confidence in intelli-gence and special training. Practice is very good in its way, but practice salted with a little brains ought to go a good deal fur-

It is not difficult to assign a reason for the regrettable change from keel to center-board in Newport. New York fashions there rule ashore and they rule affoat. When New York again takes to he keel the clam-diggers of Newport will follow fast enough

and there will be less business for the undertakers every season which no one will regret. The risks of the tight-rope performer ought not to be accepted in a well-designed yacht. As long as they are present, sailors and men who are not agents for life insu ance companies will repudiate such craft as productions not even equal to those of the Fiji Island savages.

A REPLY TO "CORINTHIAN."

Editor Forest and Stream: In a late article by "Co Corinthiau" he attacks Mr. Smith for his In a late article by "Corinthian" he attacks Mr. Smith for his assertion that length measurement would tend to produce oversparred vessels, and this from the gontlemán who sparred Viren. Madeap, hitropid. Theid Wires and the new Mischlef, is remarkably cool, to say the least; much more so it seems to me than he would make it for Mr. Smith. "Corinthian" should rothan ne would make it for art, smith. Cornition is mount for member that an architect makes his plans of a house according to the requirements of the person proposing to build, and likewise a yacht designer must do as the owner wishes, though often against his own better judgment. However this may be, I don't see that "Corinthian's" remark alters the truth of Mr. Smilh's assertion at all. I was once inclined to think as "Corinthian" does—that length is the principal and only element of speed, but I have had reason to change my mind somewhat. I have seen the outter Mirrid suiling day after day in company with Midag, Schemer and Chief. She could not hold her own with Schemer or Chief, and Chief., She could not hold her own with Schener or Chief, and could not gain much if any on Midge. Now Muriel 18 40.55 feet water-line, Chief 45 feet over all, and Schemer 37.17 feet water-line, while Midge is but 28.6 feet water-line. In a run from New London to Newport the Chief and Schemer beat Muriel budly, and Midge also got in well alread of her. Glaneing at the beam of those vessels we find Muriel to be 9.14 feet, Schemer 14.5 feet, Midge these vessels we mu Mariet to be safe feet, centered that rect, image in 10.9 feet. The Chief's beam I do not know exactly, but she has, I should judge, about 15 feet. Taking in view these figures and facts, should not beam have quite as much consideration as length. and were Muriel to meet these vessels in a race on a length basis. and were Muriel to meet these vessels in a race on a length basis, would she have her due? Likewise in the Volante-Schemer race apoken of, Volante, has 40 feet on water-line by 12 feet beam, to Schemer's 37xi4.5, and the fact that Volante was outsalted "Corinchian" attributes to the fact that she is slow; so indeed would be conclude in any case when narrow and beamy yachts sail together on length; accept perhaps in double reef breezes. I have seen but few very narrow yachts of the English type sailing with wide center-board vessels, but those I have seen cunnot have a fair race with center-board vachts of similar longth in our average region western without receiving considerable time allow. age racing weather without receiving considerable time allow

ance, owing to their being smaller.

That the English type of boat is the more weatherly any one will allow who has seen them in their native waters, and if a gentioman wishes a rough-weather yacht why should be be debarred a fair race with his center-board friends, which, I think, is attainable as near as possible by the present Seawanhaka rules, which Mr. Smith advocates. I cite these instances as bringing together vessels of opposite extremes which it might be desirable

to race together.

A time allowance based upon length alone will do well enough A lime anowance used upon length above white were along a when all vessels are of the same general shape, but it cannot be made to apply fairly to such cases as I have spoken of. "Corinthian" also inquires if it would not be fairer to compare Introjul to Rambler, one of her own class, rather than to Twid Wave. to Rambler, one of her own class, rather than 10 Iwas. Perobably it would; so let us make the examination. Rambler is 27.6 feet longer on water-line than Intrepid, and by length allow-ance this would give Intrepid something more than a minute less than what she now receives from Rambler by cubic allowance! As to freeboard, Rambler has but 2 feet 8 inches, while Intrepid has 3 feet 9 inches. The Rambler's draught without keed is 8.2 feet.

nas stocks inches, the humans strong in motor west so been or 6 per cent, of her length, while intropid draws 8.5 feet without keel, or 8 per cent, of her length. How much this difference taxes Intropid by cubic allowance "Corlathian" need not be told.

He seems desirous, too, of having pointed out a yacht of scientification.

tific construction that has developed speed without some alteratific construction that has developed speed without some altera-tions. Saying nothing of many English yachts of this kind I could name, I will point to Madeap. Three days after her sails were first bent she entered the N. Y. Y. Club Regarta and was an easy winner against such craft as Kaiser and Active, the latter a much larger yacht, built from a model by Mr. William Force. "Corinthian" also casts reflections upon Vindez as a slow and unweatherly yacht. The best argument on the question of her speed is her former owner's well-filled plate-locker, trophics of races won by a keel against center-board yachts. As to any question of her weatherly qualities, the fact of her cruising the coast from Cape Sable to Savannah and twice round-try Hatters in midwinter is a sufficient answer; a feat, I think,

druising the coast from cape cape to a fact of the found in Hatteras in midwinter is a sufficient answer; a feat, I think, "Corinthian" would hesitate to undertake in some of the sloops of the same class whose good qualities in other respects he is not

slow to praise.

old seem as though "Corinthian" had some other object in It would seem as noogal view that an argument on time allowance when he so rabidly attacks Mr. Smith and his productions, and when he aims so gratuitous and uncalled for a slur at the owner of a little cutter. I pray "Corithiam" will take it in good part when I express my pray "comminate with the tr in good par, which copyrish gentinents to this effect—that a gentleman when writing under cover of a num de plume should exercise greater courtesy than when he assumes the responsibility of his words over his own name.

We regret that the desire to leave our columns open to all

We regret that the desire of leave our commissions assisted of opinion should have been the untoward cause for the appearance in print of the aliusions referred to by Mr. Cromwell. Concerning measurement by length we believe "Corinthian" is too good a mathematician to countenance any such folly, though his letter may have made it appear so. Length measurement is the straw at which drowning men clutch when they find themselves to any intelligent to gress a simple problem. Intelligent the straw at which drowning men clutch when they find them-solves too unintelligent to grasp a simple problem. Intelligent persons who begin with a projudice in favor of simple length invariably discover 'is shortcomings upon investigation and come to the conclusion that it is altogether too simple. As Mr. Cron-well correctly remarks, it will do well enough for boats of one type, but in that case almost any arbitrary element will suffice for comparison of size. It is in matching different types that the cloven foot of simple langth is detected. As long as longth is synonymous with size it can be applied with equity. When it is no looper interchangeable with size its application becomes illog-ical and unfair and its effect is vicious, forcing the growth of no longer intermanagemos with a state it application becomes and-ical and unfair and its effect is visious, forcing the growth of short, dumpy reseals to an inordinate degree. A glanca at a few commonplace figures will explain this even to the most obtuse. A desirea a cutter obxi2x0 for his own good reasons, right or group. B builds a sloop of the same length, 69x2x7. On length both would sail on oven terms. They will ton in the following broportion: the cutter, 90x12x9=6,450; the shoop, 90x20x7=8,400. proportion: the cutter, 60x1239-6,39; the sloop, 60x20x7-8,40. In other words, the sloop may be 30 per cent, larger and yet enter this amount unpaid when racing on length. The fallacy of such a rule is so glaring that it is a wonder how it ever gained widespread adhesion. The effect of such a rule is equally evident No one could build anything departing from the beamy type without giving up all hope of racing. Hence the unfortunate

reponderance of the round "wash bowl" vessels in our flow with all the drawbacks of huge spars and excessive canvas, want of accommodations, except under a trunk, unseaworthiness un less under a very slow rig, and dangerous enough to count the victims drowned annually by the hundred. Such craft may be the highest conceivable in naval design to a certain class, but we submit that educated men will be slow to accept the results of the day as anything more than the clumstest makeshifts in which all elements of a safe, hand, room, weatherly vessel are swamped in the necessity for producing the most power—the greatest size—on a given length, a method by which taxation is wrongfully escaped at the expense of the most desirable qualities the perfect yacht should possess. Length measurement is the most detrimental over devised, and with the intelligence of the age it should be a disgrace to find the rule on the books of any club.

UNCAPSIZABLE BOATS

Editor Forest and Stream :

Latur Forex and stream:—
It was with no small degree of pleasure I read your yachting columns in your last number. I have had considerable experience in boating and shipping in various countries, yet it is with ence in boating and sapping in various countries, yet it is with diffidence I ofter you the Following remarks, relative to two im-provements of a nautical character which I am introducing, and which improvements are now being protected by letters patent here and in other parts. One of these inventions is for preventing open boats or any small vessels from upsetting by pressure of wind or squalls. The other is an improvement for yachts, or for other vessels, by which they can be made more weatherly than heretofore, and that without the use of center-boards and false keels. I am quite convinced that science and practice have done nearly all that can be done in the way of perfecting the lines of shipping, the dimensions and placing of sails, etc. But the question of present perfection has been carried too far in other respects, and hence many simple yet important things relative to other qualities have been entirely overlooked. My present improvements are in the latter direction. I have submitted these improvements to several gentlemen of high scientific attainments, civil ongineers, yachtsmen, and nautical men. On first naming the matter to them, I was always met with a smile of incredulity; yet all of those gentlemen, on seeing the matter illustrated, were just as ready to admit the importance of these improvements in complimentary terms.

I am sorry I cannot show my models to the public at present,

as they are now in Washington; but privately I can refer you t a gentlemen of this city who is noted for his scientific know edge of yachting. He has inspected my models and approved them. With your leave, I shall offer further details in a subse uent communication JOHN McLEOD.

quent communication.

New Fork, March 10th.

The inventor has explained his improvements to us, and they are certainly ingenious enough to justify full particulars, as soon as he is prepared to make public the specifications upon which his patents are founded.

STEAM YACHT BURNED.—The Arrow, of Geneva Lake, Wise sin, was burned by an incondiary March 11th. Loss nearly \$15, 600. If we mistake not, this is the Arrow built by the Kirby Brothers, of Wyandotto, for high speed. She attained about 16 miles an hour.

Woman's Golumn.

IN SEARCH OF FERNS.

A S I listen to the stormy music of the March wind, while it "bloweth where it listeth," and watch the strong, swift flow of waters swollen by spring freshets, my heart throbs with a vain longing to add my shadow to the innucerable other shadows that dwenty account of the shadow of the control of the shadow of the control of the shadow of the control of the contro present. Therefore I must be content with a retrospect of a bright day in the spring that has gone, and hope for just such another in the spring that is here. The earliest vernal flowers bloom again; the snowdrop, enblem of hope, shows itself as the longer days encroach upon the night, and the yellow crocuses, sacred to Saint Valentine, the lover's saint,

"The first gilt thing

over's saint,

That wears the treabling pearls of Spring,"
have awakened from their late lethargie state, and the
borders are gay with the "cloth of gold." Surely some
early wild flowers are in bloom in the woods now; at least
the mosses, saturated by recent rains, are in all probability fresh and vigorous and green, while the licheus rejoice in the solitude of which they are the fit emblem.

It will not be a great while now until there comes the
anniversary of a day on which four tilnerant pleasureseekers, bound together in a sort of quadrilateral friendship by one common purpose, arrayed themselves—not

ship by one common purpose, arrayed themselves—not altogether like "lilies of the field"—and, armed with bas-kets and gardening trowels, betook themselves to sylvan scenes, a short distance from the common haunts of

men.
The historian was the least but not the last of the party. The landscape was not new to her, and for that reason she was looked up to as a "guide, philosopher and friend" by those who at times followed in her footsteps, at others kept by her side, and at others formed exploring parties on their own responsibility. Our route for almost a mile lay along the railroad. The genial temperature of the eart, the soft blue of the sky, the gleaming beauty of the water course, over whose sands and shallows the willows hung their pensive branches, all contributed to add to the lightness of hearts that were free from care, and seemed in their general joyousness to be moved by the vital impulses of the season. Presently we came to a long railroad bridge which the historian of the party absolutely declined to cross. There are certain heights which render me dizzy-headed. Fame itself should come to me in moderation; I fear I could not stand too great an amount en. The historian was the least but not the last of the party.

even of prosperity. After considerable urging and offers of assistance, for which I was obstinately ungrateful, it was decided to go down to the water-course and build a bridge in a primitive way by throwing stones therein. While contributing my share of manual labor, and keeping a watchful eye in hopes that a trilobite might peradventure find its way into my fingers as a relic of the palezoic age, I redeemed my reputation in the eyes of my companions by unearthing and dispatching a long, lithe wriggling snake that had its local habitation underneath a goodly rock I had appropriated for the bridge that was in process of construction. I am by nature peaceable, except when I come in contact with a snake; let it run from me never so nimbly, pursue it I must, and great is my joy in that victory which ends in the total destruction of the serpent, who is my natural enemy. There was a chorus of congratulations from two of the party who had stood rather aloof, and fervent assurances that I should conquer all my enemies for a year to come, whereupon I admonished them to remain my friends, in view of the discomfiture that avaited them in case they did not.

to come, whereupon I admonished them to remain my friends, in view of the discomfiture that awaited them in case they did not.

We nanaged, after a time, ny considerable activity, to cross over our bridge without wetting our feet. Clambering up the clayer bank, we found ourselves in an open field, through which for a hundred yards or so we followed the furrows of a plow that had lately furned up the fresh soil. Next came a hillside covered with young timber and dotted ners and there with a spontaneous ourgraver of May apples, sangumaria, blue-bells, trillicians, and vacous other with flowers too numerous to mention. Beyond lay woods of heavier timber, but here was our stopping place, for the long fronds of the caterpillar ferm unfolded on the hillside, and the maiden-hair, green like unto the hair of a Naiad, offstered around certain bare, gnarled, angular roots, from which it required more digging than was merely "a labor of love" to disengage if. For a time we were enthusiasts. We vied with one another as it which should have the finest collection. A disinterested spectator could hardly have told which one of our perspiring crowd best deserved the title of the "Queen of Spades." Trillicians, blue bells, amenones, wood violets and terms innumerable rewarded our quick, attentive yees, and when we dug for the roots of the spotted-leaved adder tongue, with what sincerity and earnestness did we assert that those same roots must reach to the center of gravity.

Then came a time when we rested from our labors, laid aside our trowels and roamed here and there along the hillside, watching the sparrows and redbirds, until in a great thorn tree was discovered a nest of one of the latter; but the crowning oven of the day was the discovery

great thorn tree was discovered a nest of one of the latter; but the crowning ovent of the day was the discovery of a spring, out of which might have drank the Satyrs and Dryads—so pure, so clear, so crystal-like were its pellucid vaters. It was discovered in a little cleft in the hillside, and there was general rejoicing, for every one of us was thirsty; but cup we had none. There is an old proverb that "God reaches us good things by our own hands." We verified it, and not contented with a mere handful we knelt upon our knees and drank freely. We imbibed by turns, and the last to drink was our youngest, who knelt so gracefully and bent down her flushed face so daintily that we constituted ourselves a committee of interruption, and from the bank above commented so freely upon her attitude and appearance that she could

interruption, and from the bank above commented so freely upon her attitude and appearance that she could not drink for laughter, which threatened to choke her. How beseechingly did she turn her brown eyes upward and entreat of us to desist. It was resolved that the spring should be known henceforth and forever as the Minnie-Mallie-Flora-Elizabeth-Spring.

Slowly then we turned our faces homeward, now pausing to mark a bird whose plumage glistened with a brilliant, bronze, metallic lustre, or stooping to gather one more bunch of the amenones that bent their pearly heads in countless numbers. How green was that grassy slope I How full of genial delights! We lingered, loth to go. How far away we felt ourselves from life's everyday cares. Here might we indulge in snatches of reverie, in tender recollections, in buoyant hope for the future, safe sheltered from proud defiance, or bitter hate, or malignant innuendo.

in tender recollections, in buoyant hope for the future, safe sheltered from propud defiance, or bitter hate, or malignant innuendo.

It seemed to me, as I lingered in the dreamy and tranquil spot, that it needed but the charm of moonlight to reveal Oberon and Titana dancing in voiceless joy, but sentiment fled before the practical suggestion that my followers would be compelled to break a long and shining spear of grass in case abstraction unfitted me to be their leader, and I remembered that when Charles the Simple, of France, was abandoned by his lords they broke a straw in token that their allegiance ceased.

I take up the burden of life again, and with it a basket and trowel that grow heavier as we draw nearre home. How tired we are, and yet our morning has been consecrated by associations which we would gladly keep green flower. With eager eyes do we look forward, nearing the village, and with what good will do we write in the expressive ejaculation, "Dulce domum." L, G, P.

PUBLISHERS' DEPARTMENT.

"THE CALIFORNIA ROWING BOAT APPARATUS," says the San Francisco Olympian, "bears off the palm, has no springs to draw the body forward with a jerk, as is the case in all previous attempts at Rowing Machines. The oars sille in friction bers, while the pressure is regulated by thumb-sersew. The boat is nonnted on rockers, and careens if the puller is unsteady in his seat. It is pronunced by oarsmen to be a perfect imitation for boat and water, and as a health machine surpasses anything yet devised." THE HAZARD POWDER COMPANY

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square contributes of 1 lb, only,

Hazard's "American Sporting." os. I (fine) to 6 (coarse). In 1 lb. canisters and lb. kegs. A fine grain, quick and clean, for up-nd prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

22.1 (fine) to f. coarse). In land 5 th canisters and 64 and 124 th. kegs. Burns slowly and very can, shooting remarkably close and with great such allow. For field, forest, or water shooting, ranks any other brand, and it is equally sericeable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFO, FFG, and "Sea Shooting" FG in kegs of 25, 121, and 61 bs. and cans of 5 bs. FFFG is also packed in 1 and 4 b. canisters. Burnistrong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rike Powder of the country. Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POW-DER; elso, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesties tour onice, See WALL STREET. NEW YORK.

Attractions of Arkansas.

SECOND PAPER

N touching upon the river system of Arkansas, it will not be necessary to be very statistical. A glance at the map will show that the Mississippi River flows along the greater part of the eastern boundary of the State, and the Red River of Louisiana along a small part of the southwestern.

Beginning then in the northeast, we find first the St. Francis River, flowing out of the State of Missouri through low lands, cypress swamps, cane-brakes, etc., in a generally southerly direction, and emptying into the Mississippi. This river is navigable by steamboats for a portion of the year. It is stocked with all the coarser varieties of fish, and has some bass, and many perch of different varieties. Then comes L'Anguilla, a sluggish and unimportant stream. Proceeding westward, Crowley's Ridge, a low range of hills, is crossed, and Cache River reached. It is a thin, chocolate colored stream, with immense "bottoms" and cypress swamps -all of which are, at certain seasons, filled to overflow ing with dirty water. The stream rises in Missouri, and empties into the White River, in Monroe County. But for a railway bridge near the mouth, this stream would be navigable for light-draft steamers. The river is well stocked with fish, and flows through a notable game country, much of which is in its native wilderness state. Deer, turkeys and bears abound along the course of this river, and wild fowl in astonishing numbers visit its sloughs and shallows. A portable boat would be a great help in this region. Going still westward we come to the Black River, a fine stream of dark-colored water-properly named—rising in the mountain country of Missouri, flowing southward through the northeastern part of the State, and emptying into the White River at Jacksonport. The stream is rough and rapid in its upper course, and smooth, but not sluggish, in its lower. It is well stooked with game fish, as well as the coarser varieties, and there are some notable trolling places along its course. Both the main stream and its tributaries are noted for the hunting grounds in their vicinity. Wild

fowl, in their annual migrations, pursue the course of this viver. The stream is navigable for steamboats most of the year to, and into, Missouri. Packets ply regularly as far as Pocahontas. Ark. The "boss" of this line never neglects an opportunity to place a sportsman under obligations to him. Being of the fraternity himself, he calls it "being good to his own sort." At Jacksonport the Black River is joined by a stream of the clearest water in the State, one as well entitled to its name of White River as is the Black. This river rises in the Boston Mountains in the northwest corner of this State, and flows northcast into the Missouri, thence southeast again into this State, and eventually into the Missispipt. This stream is navigable, and actually navigated by steamboats to Batesville all the year, and as far a Forsythe, Mo., during the winter and spring months. It is abundantly stocked with game and food fishes. Its banks abound in good hunting grounds, and the mountain scenery along the upper waters is exceptionally fine, and worthy of far more attention than it receives. Tributary to this are several rivers of lesser note; as Little Red. Sycamore, Buffalo Fork, King's River, etc., all well stocked with fish, and all running through noted game regions. In White River and its tributaries, the Olio River salmon or glass-eyed pile (Stizostedeum americana), the striped bass (Roccus chryspops), and the croppier or speckled perch (Pomocays hexacanthus), are taken in greater numbers than elsewhere in the State—or in the world for that matter.

greater numbers than dsewhere in the State—or in the world for that matter.

In the southern part of the State, tributary to the Arkansas, are the Petit Jean (pronounced Petty John), and the Fourche la Faye (Foosh la Fay) rivers; and tributary to Red River are Little River, Washita, Bayou Moro, Saline, and Bayou Bartholomew. The most considerable of these, the Washita, is navigable for steamboats—as indeed are all the others to a somewhat less extent. It will be seen that this is preëminently a land of navigable streams—and consequently of steamboats—so that it is comparatively easy to reach any desired point in the State. To this may be added, fair railway facilities; but the prime favorite with the native population is the steamboat. steamboat.

steamboat. In the bottom lands, along the lower course of these rivers, and within the district covered by their annual overflow, is a system of lakes, lagoons, or ponds, usually lying low—anything but inviting in aspect—surrounded by cypress trees of large size, possessing and needing no long streamers of moss to intensity and set off their unspeakable dreariness. The sportsman soon becomes habitlong streamers of moss to intensify and set off their unspeakable dreariness. The sportsman soon becomes labituated to these gloomy scenes, and learns to flud not only fish and game, but pleasure in exploring them. They usually have one bluff (but not very high), and one low or sloping bank. The high bank is not unfrequently covered with a luxuriant growth of cane, furnishing unlimited supplies of fishing-rods, as well as affording cover and concealment to the careful hunter. The lakes are generally supposed to be old river beds, and are uniformly of the width of the parent stream. They are resorted to by myriads of wild fowl in the winter months. Some of them are quite deep, and many are fed by cool springs at the bottom. These latter are exceptionally well stocked with fish. Concerning the system of lagoons, of which these form so considerable a part, I quote from good old 'Uncle Thad' (Aun. Angler's Book, pp. 112):—
"The lakes, as they are called (though they are more properly ponds), along the alluvial banks of the Mississippi become very low after a succession of dry seasons and the fish cease to breed in them; this, with excessive fishing with nets and looks, almost depopulates those fishing with nets and looks, almost depopulates those

property points, and the amivait banks to the ansissispip become very low after a succession of dry seasons and the fish cease to breed in them; this, with excessive fishing with nets and hooks, almost depopulates those waters, but when a good rise in the river overflows the bottom lands, the ponds are swept of the foul water and replenished with fresh, and at the same time restocked with fish. Then it appears almost miraculous where the vast numbers of croppies, bass, perch and other fish come from, and there is no other way of accounting for this fact than by supposing that all the lakelets and streams of Wisconsin and Minnesota to the north, have thrown off their surplus production, which they appear to have garnered up."

To give any adequate account of the number, extent and resources of these lagoons would far exceed the allowable limits of this paper. I will only add that they are as a general rule stocked with our game fishes—pickerel, bass and perch, independently of the character of the parent stream. To illustrate: it is generally believed here that the Mississippi, the Arkansas and Red rivers do not present the conditions necessary to these fishes, and that they are consequently not stocked with them, as are the other rivers—the White, the Washita, etc. My own observations have satisfied me of this fact. The lakes along these streams, on the contrary, are well stocked with choice specimens of the bass and perch tribes. Indeed, the finest pickerel and black bass I have seen in the State came from a lake in the vicinity of Arkansas fiver, when not a specimen could be taken in that stream flow across the "plains" and are subject to the "red rise" flow across the "plains" and are subject to the "red rise" flow across the "plains" and are subject to the "red rise" flow across the "plains" and are subject to the "red rise" flow across the "plains" and are subject to the "red rise" at high water in the spring or early summer, when the waters are discolored by contact with some formation through which they

cause of the absence of game fish from the main streams the Mississippi above the mouth of the Missouri should cause of the absence of game is a free the Mississippi above the mouth of be stocked with them, and probably To the geologist and the student

cause of the absence of game fish from the main streams the Mississippi above the mouth of the Missouri should be stocked with them, and probably is.

To the geologist and the student of natural history, Arkansas presents a field full of rare attractions. But time and space alike are wanting to even touch upon them. I write in this leiter only for the sportsman, and could I but set the hands on the dial-plate of Time back twenty-five years, then indeed might believed to say something of interest to that class. That was indeed a "blissful and never to be forgotten age, when everything was better than it has been since, or ever will be again." In those days game was too plentiful to afford sport. The wants of the people were few and simple, and easily supplied. If meat were wanting, the man of the house would rise a little earlier than usual and repair to the woods with the faithful dog and the trusty gun. Early breakfast time would see him back again with the choice parts of a fat buck. At the approach of cool weather in the fall, a week or so set spart for that purpose would produce an abundance of minual food for the winter supply. Many are the tales of adventures with panthers, etc., happened upon in excursions after the more useful animals of the classe. Occasionally the animals classed as "varmints" becoming too numerous for comfort, neighborhoods would turn out to destroy them, and thus keep them within proper bounds. The soil, generous to a fault, yielded a most disproportionate reward to the labor invested. Cattle and hogs came on apace, with no other care than they were able to bestow upon themselves. Sheep, however, seen never to have thrived, and never have been able, even unto this day, to gain favor in the eyes of the people, owing probably to a mistaken notion that they hite and worry the dog! However, as have already remarked, the wants of the people were few and they were able even unto this day, to gain favor in the eyes of the people, owing probably to a mistaken notion that they hite and worry

"Bng-juico" was obtained and used in moderation—on account of the malaria—and that custom is honored even unto this day.

I have spoken of the Bostom Mountains in the north-western part of the State. Whether these elevations on the fair face of the State were named for the "Athens of America" and the "Hub of the Universe," is not now to be ere conjectured. One thing, however, is certain, the "Athens" of Arkansas and the seat of her only University of learning, the town of Fayettrille, is in the very heart of these mountains, and all the region round about boasts of the culture and refinement of her people. It is in these mountains that the scene of the story of the "Arkansas Traveler" is laid, a story from which it is said the general impression of the people of our State is almost wholly derived. This story has been in print and may be familiar to many of your readers; to many of the younger, however, it will be new. I have procured a copy from B. S. Alford, Esq., formerly of Little Rock, Arka, now with his brothers, A. & A. G. Alford, 2S. Calvert Pathuner, A. & Challord, 2S. Calvert street, Baltimore, Ark., gun dealers, who kindly gives permission to publish.
"Col. Sandy Faulkner, the original 'Arkansaw Traveler', was born in Georgetown, Scott County, Ky., March 3d, 1803. He cannot to Arkansas in 1829, and settled in Chicot County, on the Mississippi River, as a cotton planter. In 1829, Col. Faulkner (with his father, the late Nicholas Faulkner, a Virginian by birthy took up his residence in Little Rock, where he died August 4th, 1874, at the age of seventy-one years.
"It is well known throughout the Northwest that Col.

late Nicholas Faulkner, a Virginian by birth) took up his residence in Little Rock, where he died August 4th, 1874, at the age of seventy-one years. "It is well known throughout the Northwest that Col. Faulkner was the original personator of the 'Arkansaw Traveler,' it was his pride to be known as such. The story, it is said, was founded on a little incident which occurred in the campaign of 1840, when he made the tour of the State in company with the Hon. A. H. Sovier, Gov. Fulton, Chester Ashley and Gov. Yell. One day in the Boston Mountain, the party approached a squatter's for information of the route, and Col. 'Sandy' was made spokesman of the company, and it was upon his witty responses the tune and story were founded. On return to Little Rock, a grand banquet was given in the famous 'bar-room' which used to stand near the Anthony House, and Col. 'Sandy' "was called upon to play the tune and tell the story. Afterward it grew into popularity. When he subsequently went to New Orleans, the fame of the 'Arkansaw Traveler' 'bad gona shead or him, and at a banquet, amid clinking glasses and brilliant teasts, he was handed a violin by the then Governor of Louisiana, and requested to favor them with the favorite Arkansas tune. At the old St. Charles Hotel a special room was devoted to his use bearing in gilt letters over the door, 'Arkansaw Traveler.'"

A lost and bewildered Arkansas traveler approaches the cabin of a squatter, about forty years ago, in search of lodgings, and the following dialogue ensues, the squatter all the time fiddling the first bars of a tune over and over again, between each question and answer :-

Helio, stranger.

Alas, times change and men change with them. The Arkansas of to-day would scarcely be recognized by those worthy old campaigners.

A DAY IN THE WOODS.

FIRST PAPER.

It was late in mild October, and the long autumnal rain Had left the summer barvest fields all green with grass again; The first sharp frosts had fallen, leaving all the woodlands gay With the lues of summer's rainbow or the meadow flowers of May.

Through a thin dry mist, that morning, the sun rose broad and

red, At first a rayless disk of fire, he brightened as he sped; Yet, even his noontide glory fell chastened and subdued, On the cornielas and orchards and softly pictured wood

"And all that quiet afternoon, slow sloping to the night, He wove with golden shuttle the haze with yellow light; Slanting through the painted beceles, he glorided the hill And bemeath it yould and orchard lay, brighter, greener sti

Where June winds roned, in ages of waves of rye;
But still, on gentle bill slopes, in valleys fringed with wood;
But still, on gentle bill slopes, in the leavy corn crop stood.
Ungathered, bleaching in the sun, the heavy corn crop stood.
J. G. Whittier.

IT was a few days later than America's poet has described, for the dim. smoky twilight of the last October evening was gradually settling down over hill and meadow! leaving but a thin shreed of crimson visible above the horizon, as we drew up in front of Bill Simpson's cottage, situated upon one of the pretitest knolls and most picturesque pieces of rural seenery in Suffolk County.

Never shall I forget the first day my old friend Thorpe drove me from the railway station up hill and down dale, through cedar groves, and by the courses of purling

streams, and when, completely overflowing with sentiment, I could no longer suppress my thoughts of admiration, as the wagon swung suddenly around a wind in the road, and the little embowered cottage met my eye, I faltered, for little indeed was my expectation, at the pace at which we were rattling along, of halting so shruptly, when, where should he (to fully express the idea), where should he "dump" me, but right down in front of this same little gate. It swings yet upon its rusty hinges at the same entrance which has so often welcomed us, and as often furnished us a means of exit en route for Pine Neck, or the "Point."

The byre, barns, corn-crib and out-houses, are overrun a little more with lichens; the same lusty oaks nod dreamingly to the listless winds; the pond is just as full, and Tom's mill gigs away far into the night the same as upon the evening of my first visit. Though some years ago, it seems but yesternight that we sat around the hearth in that ancient kitchen, revelling in great expectations, some of which were never realized.

Faithfully, indeed, do I romember that cool October evening. There were four of us; and we had come one hundred miles to shoot quali among the buckwheat heaps and corn shocks. Our host was awaiting our arrival, and after making the usual courtesies, grasping him by the hand, I know not how many times over, removing the baggage from the wagon and putting up the horses, we stalked in Indian file into the snug little dining-room to honor a repast, tight and savory whilfs of which would have tickled the cockles of the heart of an alderman. And honor it we did, for we had not supped for five long hours, and the drive (after leaving a miserable, creeping train) up through the beautiful country had sharpened our appetites amazingly.

As I recall that romantic event I sometimes think we did behave indecently, but then it was there to be eaten, and that's all there was to it, and we've done the same thing repeatedly since. But, adjourning from the remaining fragments of what onc

"Spread out, boys! and let these fellow six down, any look chilled. Are there many quali, Oscar?"
"There're more than this crowd could shoot in six months. I was almost tempted to try my hand to-day, but I don't know, somehow I did'nt,"
"That's good. I'm glad you did not. It would not pay any man, in my estimation, to break the law, even for the sake of one day, and then you might be caught, sull then yield?"

for the sake of one day, and then you might be caught, and then what?"

"Be hauled up before Bisgood to pay for the privilege. Saucy penny now that is, I reckon," said Will Wilson, as he drew further from the blazing fire.

"What's the penalty for shooting a dog?" chimed in Henry, derisively, over which there was a tremendous laugh at the espense of poor George, who laughed louder and longer than the rest. I do not really believe I ever met him but that he was laughing; and to be sure he related the story in such an honest way, though laughing all the while, that every one of us concluded that it was a sheer accident.

"I thought it was a ghost at first, when I saw the white thing fly over my head, but then I don't very often got scared at them."

"No, George, do not allow such things to make a false impression on your mind. There's no such thing as ghosts, although my hair would stand at the recital of some stories my father would stand at the recital of some stories my father would tell to me when I was a mere boy, and many a night have I gone trembling with

some stories my father would tell to me when I was a mere boy, and many a night have I gone trembling with fear fo bed while he would laugh at the ignorance of believing in such absurdities.

"There is one story in particular which would always strike terror into me. "Iwas about an old man named Nevill, whom, after his demise, would be seen walking around his domain, grim, gaunt and lean."

"Let's have it," was the unanimous request.

"Well, if I can tell it straight, though I cannot attempt to spin it as the old man can.

"Well, it I can tell it straight, though I cannot attempt to spin it as the old man can.
"Bob, give me some of that tobacco, and then I'll go on, and after that every mother's son to bed, if we mean quail in the morning.

quail in the morning.

"Well, to begin with, my father was born in a country famous for its poets, orators, statesmen, military heroes, and a race of men whose with has pleased nearly every nation on the globe—Ireland, (Appiause). My grandfather had but the two sons, i. e., Johnny and Wille. I'm numed after the latter. He was a gardener and had all the gentlemen's gardens to keep in Dublin and adjacent towns. The dame died when the boys were quite young, and he having so much flora and horticulture to attend to, and decirous of giving the lads a good education as well as keeping them under the eyes of a wholesome protector, was obliged to send them from home. As I said, their mother was dead, and to effect the scheme the old man sent the boys off to a Mr. Cox, who kept a grammar school in a place called Bansha, which was about twenty-four miles from their home, in Urlingford. They would come home about once a month. Sometimes they'd walk, or if they met any one coming to town they could easily get a ride for "two pence-hapenny" (five cents). But one summer evening they started for home, four of them. The two brothers, a lad named Morrisy and another named Larry. They walked along the beartiful road, bedecked as it was with the cowslip and oxalis, discussing a problem from Hamey's "Mensuration," and never looked over nor hether until they got to the turnpike which led to Nevill's, though at that time they "Well, to begin with, my father was born in a co

knew very little of the place or the ghastly legends at

knew very little of the place or the ghastly regenus at tached to it.

"In due time they came to the castle, with its unglazed, long, narrow windows and walls overrun with ivy; some of the turrets knecked off, and long crevices between the stones; together with the pond with its closely tangled, dappling bower that had grown and interwoven for years and given to the place a weird and lonesome appearance.

"Across the pond was the old fellow's mill, which, though the water was still running, had not given a grind for many a day. Around the whole was a high, crumbling wall over which in many places the ivy grew or straggled through a crevice; and around outside the wall were beautiful tall trees which over-arched the long avenue that environed the grounds.

strageled through a crevice; and around outside the wall were beautiful tail trees which over-arched the long avenue that environed the grounds.

"Jack Larry used to tell how he went to Nevill's one night to steal wood. And how he succeeded in getting the stick of timber nearly all the way over, and then wondering why it wouldn't slide over the wall, looked up and saw old Nevill disputing the their at the other end—the brazen liar." "And was Nevill dead?" asked George Wilson. "Dead! Why man, he was dead forty years. But long after his death he used to be seen walking in his grounds or riding on his old gray horse inspecting the fox covert, the deer park, etc.—but, the boys.

"People often pay dear to gratify their curiosity. Nothing should do but they must go into the old stone mill.

grounds or riding on his old gray horse inspecting the lox covert, the deer park, etc.—but, the boys.

"People often pay dear to gratify their curiosity. Nothing should do but they must go into the old stone mill. Ned Flynn said he wouldn't go into that mill for a transport—to heaven. There it was, weird and vacant-looking, with all the indelible wear of time. The great stones for grinding; the hopper and all the equiproents; the long, steep, winding stairs, and in one corner lay a great heap of old sacks which, no doubt, bountful care had once lavishly filled, but which now the boys swore were filled with ghosts; and in short everything was there just as Garrett Nevill left them, for he worked the mill after his brother Robert's death.

"The moon began to rise, and the long, silvery shadows crept in through the tenantless lancet windows, casting here and there a fleck of discernment upon a dusty object. Drowsiness came over them, and they dropped off one after another into the—I was going to say into the dreaming arms of Morpheus, but into no such beatitude did they settle, not even into soothing oblivion. "How long they had been asleep I never could find out, but Larry was the first one to wake, then Johnny. But they could not move hand nor foot, scarcely breathe, and to their terror everything was dark as a dungeon. The moon, whose fleck had thrown a little romance about the place, was overcast. Quick, airy footsteps emanated from the floor above. They heard strange noises, as if the spirits were adjusting portions of the old nachinery, and sure enough they were. In a twinkle the mill began to gig and hum at a most terrible gait. Then the spirits dashed down the perpendicular spiral stairway, making hideous, neighing chuckles as if well-pleased at their success in starting things up. The nuill went on gaining in rapidity, and the spirits threw in everything the sylphs threw in gave but one crash and that was the flast of it, the revolution was so fast. Then the spirits came for the sacks—"

sacks—"
"Wait a minute," said George Wilson, "till I get some more wood for the fire," but, on being informed that the wood was down in the hollow behind the cowhouse, George "guessed" the fire would last to the end of the story, and that's what I thought, as the story is not very long.

"I wonder if such a thing could be true?" inquired Poh.

Bob.

"Well, sir; you dare not ask Jack Larry that question If you did, he'd either knock you down, or cross his fore-

"Well, sir; you dare not ask Jack Larry that question If you did, he'd either knock you down, or cross his forehead for you for a month.

"The spirits came for the sacks (and by this time both the lads were awake), and when the spirits saw the boys, everything stopped as quick as a flash of lightning. The great sacks were caught by the millers and thing about the room helter-skelter, and the hoys were seized by some power and hurded out into the grounds, and Morrissy got flung into the pond, and that, too, in the middle of the night. The mensuration book was gone, and they managed to get over the wall (because they dare not go out by the mill-road), and whom should they stumble upon but Ned Caloy going to Dublin with a load of turf. They told Ned all about the thing, and he nade Neddy—that's the ass—'ho,' and he stood stricken with awe at the foolishness of the lads for going near the place at all. He swore a big Irish oath and said he'd tell Murray Fitzpatrick, the priest, and then, as a warning to the boys, he told them how that himself and Neddy got left when the earwan started out with turf one night, and that he had to come by Nevill's wall alone; and how old Nevill jumped over the wall and whipped the linch-pin of the cart and stole the wheel and threw it over the wall; and then the other wheel in like manuer; and after that, laid hold on the kish of turf and flung it about the road; clubbed the ass and then gave me, said he, a shelp in jowl, an begorrah I laved the ass there, an I run from this to Dublin, sixty miles, widout a flinch, an overtook the mail. "Come, come," said Henry."

coach."

"Come, come," said Henry.

"Well they went to Dublin with Caley, and he brought
them home the second day, and they drew all the lads
from the village about them and told the story just as I
have told it."

"That's a good story," said Sharpe; "but I can't hardly
take it in."

"That's a good story," said Sharpe; "but I can't hardly take it in."
"Nor I either," said Bob; "but there's some people who would."
Oscar said: "Surely that came from Ireland."
"Yes, that's where it came from; but it's a beautiful country—mirrored all over with beautiful lakes and streams, abounding with the finest trout, and the people are as kind-hearted as can be found; and if you were to take them out and place another race there, then it wouldn't be Ireland. In the contest for fame what nation on the earth can boast of a greater victory? But that's not the story I wanted to tell. Now, come to think, I'll tell that to-morrow night. Let's turn in. The ire's out."
We all said good night. Oscar's house was to be the

We all said good night. Oscar's house was to be the meet, and the Wilson's had to go up through the woods, and said they'd be down if they slept well.

HARRY FENWOOD,

Matural Thistory.

GIANT LIZARDS OF THE JURASSIC.

AR away to the westward, on the flanks of the Rocky Mountains, is the burial-place of a race of giants.

Stretching along the base of the rugged and frowning mountains for miles upon miles, embracing in its wide extent every variety of country, lonely and rarely trodden by the foot of mau, it is a fit resting-place for their huge race about which history and tradition are silent. The enormous buttes which at intervals rise in massive proportions above the level of the surrounding plain, might be taken for huge tumuli erected by a savage race in memory of their dead, as the mounds of the Mississippi Valley were built to commemorate their departed, by the strange people who have left these works behind them as their only monuments.

And, indeed, the analogy is less forced than might be im agined; for, if we dig into these buttes in the bad lands of the West, we often find them filled with the bones of this extinct and unknown tribe, just as in the mounds of Ohio we find the remains of the mound-builders. But how dif-ferent are the relics which are uncovered. In the one case are brought to light a few crumbling human bones, some cinders and charred sticks, a dozen copper beads, with a fow broken arrow-heads and perhaps some fragments of pottery; in the buttes of the Jurassic Rocky Mountain region, the bones that are unearthed are huge and black, and are turned to solid rock. So enormous are they in many cases that to lift one of them would tax the strength of the stoutest man, and some of them would weigh many hundred pounds. Great femora, six feet and more in length and eighteen inches in greatest diameter, vertebræ eighteen inches across and ten in length, pelvic bones as large as a table, and shoulderblades four or five feet long and two feet across, are some of the reliquice uncovered by the explorer. The remains of a single skeleton may weigh several tons, and the bones are frequently found in as perfect a state of preservation as though they had been covered up but yes-Sometimes, it is true, they are extensively terday. cracked and broken by the enormous pressure to which they have been subjected by the superincumbent earth for so many millions of years; but even in such cases it is possible, by careful collecting, to piece them together so as to obtain not only an accurate idea of their form, but even their exact dimensions. With the enormous bones referred to are found others of more moderate dimensions; but, as a rule, the remains buried in these deposits belonged to creatures of great size.

Mesozoic time has been well called the age of reptiles, for it was during this period of the earth's history that reptiles were the dominant type, and flourished in mar-velous profusion, being not less remarkable for their numbers than for the great variety of forms which then appeared. Among these reptiles perhaps no group was more strange—certainly none was more interesting—than the order termed the *Dinosauria*. They were strange on account of the great difference in size which existed between the various forms of the order, for certain of the genera are the largest animals known to have lived on land, while others were no larger than a cat, and they are of especial interest to the anatomist, because through them we are enabled to connect two at present widely separated classes—the birds and the living reptiles. Dinosaurs occur abundantly in Europe as well as in America, and many species have been described from the Mesozoic deposits of England and Germany. bones of these animals have been found in considerable numbers in the cretaceous deposits of New Jersey, and in one instance in the so-called Jura-Trias of Massachusetts. Though the remains of Dinosaurs are very rare in the deposits of the Connecticut Valley, evidences of their presence are numerous. These consist of the footprints of the animals made in the saud or mud of the sea-beach or the shore of the estuary on which they lived, and these impressions having been covered up by subsequent deposits and hardened, have remained to this day indelible witnesses of the number and variety of the huge beasts that made them. Many of these tracks are three-toed, and bear some resemblance to the tracks of birds, and it was for a long time supposed that all the three-toed footprints were made by animals of this class : and as some of these footmarks were no less than twenty inches long, much speculation was indulged in as to the character and habits of the supposed enormous bird that made them. Recently, however, it has been shown that many of the Dinosaurs have three toes on their hind feet, and further, in connection with almost all the three-toed tracks, have found impressions of very small four or fivetoed feet, showing that the three-toed tracks were made by animals that habitually walked on their hind legs, and only occasionally lowered their small fore feet to the ground. This state of things precisely agrees with what is known of the structure of the Dinosaurs; and hence, in the absence of any direct evidence that the tracks were made by birds, it is only fair to assume that they belong to Dinosaurs.

This order of reptiles has been divided by anatomists

into five groups. The sub-order Sauropoda includes animals of great bulk which habitually walked upon all four legs, as indicated by the nearly equal size of the fore and hind limbs, and in which the long bones were with out any cavities for the marrow. The Sauropoda appear to have all been vegetable feeders, as shown by their teeth, and were great, slow-moving, unwieldy creatures of very low intelligence. The Ornithopodo were another group of herbivorous Dinosaurs, hut differed widely from the Sauropoda, The fore limbs were much smaller than the hind limbs, and the latter present many points of resemblance to the legs of birds, The carnivorous Dinosaurs, of which Megalosaurus of England may be regarded as typical, constitute another division of this order. They were of smaller size than the Sauropoda, were more lightly built, and were thus more active and better fitted for capturing their prey. The fore limbs were much reduced in size, and the usual mode of progression appears to have been by walking or leaping on the hind limbs. The teeth were serrated and keen and trenchant, and the feet were armed with long, sharp claws. The carnivorous Dinosaurs, no doubt, preyed upon their larger but more sluggish herbivorous cotemporaries.

A fourth sub-order of Dinosaurs is the Compsognatha These were animals of small size, and were in many respects very bird-like in structure. They had long necks, long, light heads, somewhat resembling a bird's, the jaws armed with teeth, and had the femur, or thigh bone, shorter than the tibia, or shin bone. The fore limbs were very small, and the hinder ones large. This suborder has but few representatives, but it is probable that the American genus Nanosaurus belongs here.

Another very remarkable group of Dinosaurs were the Stegosauria. These were of great size, and had large fore and hind limbs, the latter, however, being the longest. The head was very small, the tail very large and long, and the animal was protected against the attacks of its enemies by an armor of huge bony plates and by great horn-covered spines, some of them over two feet in length.

It is difficult for us to understand, in the present state of our knowledge, just how these strange creatures, so different from anything that we now know, lived, and equally so for us to attempt to picture to ourselves their surroundings and their contemporaries. Life was abundant at this epoch, and extremely varied. Small mammals, almost the first of their kind, had appeared, but the largest of them scarcely exceeded in size the weasels of to-day, and all were probably marsupials. There were also crocodilians and turtles in great abundance, and strange fishes, of the genus Ceratodus, one representative of which still lives in Australia, inhabited the waters about the shores of which the Dinosaurs dwelt in such abund-Vegetation was luxuriant and the climate was tropical in its warmth. It is very probable that in America pterodactyles were also abundant, as they certainly were in Europe. One fragment of a pterodactyle has, indeed, been described from the Jura of the Rocky Mountains, but the rock in which the Dinosaurs are found is not well adapted to the preservation of such delicate bones. It is also likely that birds were represented here, though of this we have as yet no evidence. But the presence in rocks of this age in Europe of the strange Archeoptery, warrants us in supposing that the pterodactyles were not the only inhabitants of the air.

Such were some of the features of the animal life in this country during Jurassic time, though we have been able to touch only in the briefest manner on some of its most marvelous facts. In its abundance and variety it is even more interesting than in differences between the forms then living and those now upon the earth.

Many facts will be required before we can gain an adequate conception of the marvels of this long past age, but the hints which we already have indicate that the story. when told, will be a most interesting one,

Notes .- We have recently received the Monthly Journal of the Virginia State Agricultural Society, which contains, together with a number of other interesting articles, a sketch on "The Beaver in Virginia," by Mr. Richard Irby, of Ashland, Va. The article though brief is interesting, and in view of the frequent queries by our correspondents as to the abundance of the beaver in the South, we do not hesitate to recommend it to them. So far as the author speaks of what he himself has observed the article is, of course, perfectly reliable and trustworthy, but we venture to suggest that the same cannot be said of his quotations. The statement by a recent writer in Wide Awake that the beavers, in the construc-Editor Forest and Stream:—
The flesh which I have seen from the mallard duck containing the mall as uponesed that this and its pompanion story, that these "ingenious and intelligent minimals" use the tail as a trowel for pressing and smoothing the muld on their dams, had long since been relegated to the limbo of fable. We confess that the statement that the Northern beavers employ their dams as that the statement that the Northern beavers employ their dams as a loss to know from what authority Mr. Irby quotes.

The explanation given of the reappearance of the tion of their dams, transport mud from place to place upon their tails, "which are broad and flat," is especially open to criticism. We had supposed that this and its companion story, that these "ingenious and intelligent animals" use the tail as a trowel for pressing and smoothing the mud on their dams, had long since been relegated to the limbo of fable. We confess that the stategated to the limbo of fable. ment that the Northern beavers employ their dams as habitations is also new to us, and we are at a loss to know from what authority Mr. Irby quotes.

beaver in streams which flow into the Chesapeake is very interesting, and we are glad that the facts in regard to the point have been put on record,

Mr. H. W. Henshaw's ornithological report to Capt. George M. Wheeler upon collections made in portions of California, Nevada and Oregon, which is published in the report of the Chief of Engineers for 1879, is an extremely valuable pamphlet. The region examined by its author "amounted practically to a continuous line from Carson, near the western horder of Nevada, and a little south of the Central Pacific Railroad, to the Dalles, on the Columbia River," and the work extended over the summers of 1877 and 1878.

A region so interesting, when explored by such an ornithologist as Mr. Henshaw, could scarcely fail to furnish very interesting results, and the annotated list of one hundred and eighty-four species which he has given us fully justifies our expectations. The notes on the habits of many little known species are very full, and add much to our knowledge of the bird life of the Sierra Nevada and Cascade ranges. For the important conclusions which the writer reaches, we must refer our readers to the pamphlet itself. It should be in the library of every ornithologist.

We wish to call the attention of the readers of this column to the very interesting report of the Commissioners of Fisheries of the State of Maine, to be noticed in our Fish Culture column. Messrs, Stillwell and Smith have set about their work with vigor, and their efforts are already bringing forth good fruit.

Professor A. E. Verrill, of Yale College, has recently published in "The Transactions of the Connecticut Academy" a portion of his most important and valuable paper on "The Cephalopods of the Northeastern Coast of America." So far as published (Part I.), it treats of The Gigantic Squids and their Allies. This part is illustrated twelve plates.

The subject is a most interesting one, and the paper well worthy of the subject. It is our intention, if the de-mands upon our space will admit of it, to give some extracts from Prof. Verrill's article at an early day.

mands upon our space will admit of it, to give some extracts from Prof. Verrill's article at an early day.

PARASITES IN A DUCK'S FLESH.—Editor Forest and Stream.—Through the kindness of a professional colleague I had the opportunity of examining a wild duck (mallard) a few days ago, which was, I think, of sufficient interest to warrant the begging of a few lines of your valuable space. The duck was infested with a large number of encysted parasites of the same general nature as the trichine found in the muscles of pigs, i. an encysted form of entozoa. It had been bought in the master is to the spit, she noticed an unusual appearance of the lesion of the breast, the skin being form in one place, and called the master's attention to ling form in one place, and called the master's attention to ling form in one place, and called the master's attention to ling form in one place, and called the master's attention to the joint of the system of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of li

Through the courtesy of Dr. Hagen we have received the following notes with regard to these parasites, which will be read with interest by all sportsmen :

AMERICAN FISH CULTURAL ASSOCIATION .-- Members who propose to be present at the annual dinner given in connection with the meeting of the Association, are requested to immediately notify Mr. Eugene G. Blackford, or Mr. Robert B. Roosevelt, of the same, in order that the Committee who have the matter in charge may make due preparation.

Committee who have the matter in charge may make due preparation.

Brook Trout in Ponds.—I was born in a region of country abounding in trout streams, and in those days said streams abounded in trout, too. For many years those streams have been danimed at almost every available point for obtaining a water power. Some of the ponds thus formed have been in existence for seventy-five years; large numbers of them have been in existence for twenty-five years or more. I have fished many of these ponds repeatedly, and I know of scores of others who have also; in fact, I can name several gentlemen in your city and Brooklyn who visit these waters annually, some of whom have been born and brought up among them, and who take thousands of trout every year from those streams, who have, like myself, fished scores of times in the ponds, and not one trout a year on an average is taken from any one of these ponds. When one is taken it rarely weighs over a pound. I am now over fifty years of age, and I have to a greater or less extent studied the trout from boyhood, and I believe I know something of the conditions required for their existence and their growth. I will state enough to show why they will not, as a general thing, thrive in ponds, First, they prefer purer water, which is constantly undergoing aferation—in other words, running water; and secondly, they require or prefer food which is principally found in such water. The brief reasons stated are sufficient to condemn the altempt to make their growth in large ponds a success. I know of several attempts of the kind years ago, and every one is a failure. The only approach to success is by professional fish culturists, who raise them in small ponds where they can be fod with regularily and where their food is entirely artificial. Every pound of trout thus grown costs \$1, and more let any one invest say \$50 in stocking his pond with trout, and I will guarantee that during his day and the next generation there will not be \$50 worth of trout taken from that pond, while there

VIRGINIA FISH-WAYS.—Lynchburg, Va., March 16th.— The Legislature of Virginia, just before adjournment, made an appropriation to buy the patent right for the State in the McDonald Fish-Way, which had been adopted by the Board of Public Works some time before.

THE MCCLOUD RIVER DAM.

washington, D. C., March 19th, 1880.

Editor Forest and Stream:

I inclose herewith copies of letters from Mr. Norton, of the
Fisheries Association in California, and from Mr. Stone, in refer-Fisheries Associated in Carolina, and the Cinited States once to certain allegations of the former sgainst the United States Fish Commission. I think the publication of these in the Forest and Stream will tend to remove some misconceptions on this Sincerely yours, SPENCER F. BAIRD, Commissioner.

RIO VISTA, SOLANO CO., Cal., Feb. 20th, 1880. Professor Spencer F. Baird, United States Commissioner Fish and

Professor Spencer F. Baird, United States Commissioner Fish and Fisheries.

Dean Stat.—In the interest of a considerable body of people who reside at and to the inneedate vicinity of the chief salmon fisheries of this State, and who are deeply interested in the per-petuntion of the salmon stock in our rivers unimpaired, I beg leave to submit the following:—
It is understood that near the mouth of the McCloud River, at the fish-hatchory maintained by the United States and approved by the Fisher? Commissioners of this State, at dam constructed by the agent of the United States has been and still is in existence, that prevents the passage of any adult salmon other than the smaller salmonides of our waters; that the salmon of commerces (quinnat) is wholly shull out from this favorite spawing grounds that extend more than forty miles above this dam; that although this dam furnishes the eastest means of capturing so many salmon as the hatchery may need, nevertheless the method is faulty and wastly destructive to the fish in this, that great numbers not so needed are arrested and destroyed by delay and in their efforts to force or surmount the obstruction. The McCloud is in a thinly-settled locality, not conveniently accessible to us, and as no information has reached us through the report of the State Commissioners, or other official sources, on this matter, we respectfully fingular if such a dam is in existence. We know there was such a dam and fear it still remains; and, if so, desire to protest against if in the most decided terms. With great respect, your obedient servant,

Secretary Salmon Fishermen's Association of San Francisco

UNITED STATES FISH COMMISSION CHARLESTOWN, N. H., March, 11th, 1890.

Profesor Spencer F. Baird, United States Commissioner, Eish and Figherics.

DEAR SIR :- In reply to the contents of the inclosed letter,

dated Rio Vista, Cal., Feb. 26th, 1850, and signed by Samuel N. dated Rio Vista, Cal., Feb. 22th, 1850, and signed by Samuel N. Norton, Secretary of Salmon Fishermon's Association of San Francisco, permit me to say that there is no dam or other obstruction to the salmon, across the McCloud River, nor has there been since the latter part of September of last year; that the agent of the United States has never had a dam across the river, except between the middle of July and the middle of September of any year; that the great body of spawning salmon have ascended the river and sought their spawning grounds before the dam of the United States agent is placed in the river; that the comparatively few salmon which are checked in their course by this dam are nearly all caucht, and their sours is saved and articomparatively few salmon which are checked in their course by this dam are nearly all caught, and their spawn is saved and artificially hatched; that every year 2,000,000 young salmon are returned to the tributaries of the Sacremento; that this number is probably fifty times as great as the number of young fish that would be produced inturnally by the salmon themselves that are stopped by the dam, and twice as great as the number that would be produced by all the parent salmon in the river, supposing that none were stopped by any obstruction; that the result of this method of securing the parent salmon by the obstruction employed is not only not destructly, but is vasily beneficial to the fish in the river, since it is the means by which such a great outstifty. in the river, since it is the means by which such a great quantity in the river, since it is the means by which such a great quantity of young salution can be annually returned to the river; that, finally, the prime and sole object of the United States station on the McCloud River is to increase and multiply saimon, and not to diminish them, and any course of action that tends to reduce the numbers of the salmon would not be tolerated a moment. I have the honor to be your obedient servant, LIVINGSTON STONE.

GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory of In soming tipots for the Forder AAD STREAM Diffectory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

-New Yorkers will find good trout fishing in the streams of Sullivan County. The man who goes to Isaac W. Bradley's, at Eldred, will be sure of a basketful that will repay him for the time and expense incurred. Deer are to be had there in season.

WAWAYANDA FISHING CLUE.—At a late meeting the following officers were elected:—President, Shepherd F. Knapp; Vice-Presidents, James A. Flack and Charles Banks; Secretary, Robert E. Van Wyck; Treasurer, William C. Connor. After the meeting the members were treated to an old-fashioned feast. In an appropriate speech by Col. Lee, in behalf of the club, President Knapp was presented with a full-length portrait of himself, done in crayon by Ludovice, and measuring nearly five feet by four. The picture will remain at Case's until the opening, early in the summer, of the club-house on Crabtree Island, opposite Fire Island.

club-house on Crabtree Island, opposite Fire Island.

Graving Fishing.—Criveago, March 20th.—Gentlemen who live in Ohio, Indiana and adjoining States, and who visit Michigan for some trout fishing, should stop off at the little town of Tustin, on the G. R. and J. R. R. Near this place is a small stream, called Pine River, that empties into the Manistee River. The Manistee, being the great grayling stream of Northern Michigan, one may expect the streams connecting with it will also contain grayling. These fine fish are found in great numbers in this Pine River, which can be easily reached, being about six miles from Tustin. There is a hotel in the village, wagons can be secured at very reasonable rates, and guides will take you to the best fishing points on the stream. Camping parties would find good camping grounds, good fishing and obliging men to serve them. Should any desire further information let them write, inclosing a stamped envelope, to Mr. D. C. Mosher, Tustin, Oscolca Country, Mich., who will willingly give them all the information they require. Mr. Mosher is a fisherman, though a professional gentleman, and would secure guides for any one desiring to visit this stream. Let gentlemen who are making up their routes for the summer's fishing remember this place, and make preparations to take in some fine grayling.

NEMEWEND NEW 2000.

VARNISHED FLY-RODS.

Editor Forest and Stream:—
In your issue of March 11th is reproduced an article written by Francis Francis, Esq., on the frightening of brook trout by the flashing and reflections of a varnished fly-rod in casting, and which at first sight would seem to be plausible enough, but upon mature consideration, and with all due leftenered to so enjurate an authority as Mr. with all due deference to so eminent an authority as Mr. Francis, I am convinced that there is not much in it, and that instead of proving the matter he seems to be rather

Francis, I am consider that instead of proving the matter he seems to be rather begging the question.

The theory of angling, like the theory of medicine, is rather an uncertain subject, and opposite positions can be taken and seemingly maintained upon almost any question of either science, until the crucial test of practical experience proves their truth or falsity. The fact is that fish are not frightened by flashes of light or the reflections of bright objects, but, on the contrary, are attracted by them; any one who has ever fished by torchlight, or trolled with a bright metal spoon, can testify to this, and there is a method of fishing practiced by the Chinese, by means of a board painted white and attached to a boat at such an angle as to reflect the light of the moon upon the water, when the fish, attracted by this, jump upon the board as the boat is moved along.

That fish are not much disturbed, if at all, by the flash-

ing of a polished fly-rod per se, can be easily proven by any one who, being securely hid behind a clump of brashes, can wave his rod as "wildly" as necessary without slarming them to an extent to frighten them away or prevent their biting; indeed, the unnatural shaking or disturbance of a branch of a bush near the brink by the careless angler will alarm the denizens of the stream more than the most highly-varnished and brightly-mounted rod ever made, when waved over the stream by an angler who keeps himself hid from view, and herein lies, to my mind, the key to this whole matter. It is the angler who scares the trout, and not his rod; and this probably applies with nore force to the comparatively narrow and open streams of Great Britain than to the more extensive waters of our own country; this view seems more probable in comnection with the fact that Mr. Francis advises casting sideways instead of overhead, which method could only be practiced successfully on narrow streams, for sideway casts are necessarily short ones, and would not answer at all for most of our waters. There are situations, however, when the sideway cast can be used advantageously, and is used occasionally by all good fly-fishers. The main rules to be observed in fly-fishing I conceive to be these: in narrow streams to keep entirely out of sight, and in open waters to make long casts; in either case the fish, no pen waters to make long casts; in either case the fish no pen waters to make long casts; in either case the fish no pen waters to make long casts; in either case the fish, not seeing the angler, will not be alarned at the flashing of the rod; the finer the water the greater the caution that must be used on the one hand, and the longer must be the cast on the

Mr. Francis does not offer any remedy for the varnished

the one hand, and the longer must be the sed on the one hand, and the longer must be the cast on the other.

Mr. Francis does not offer any remedy for the varnished rod, but merely suggests that it might answer to paint it sky-blue, or a dull, smoky tint, without polish; but this, I know, will not do. I have seen rods that had the varnish scraped off and were painted a delicate pea-green, to harmonize with the foliage of trout streams, and I have seen the bark left on alder, chu and tanarac poles when used in bait-fishing, but they were not more successful than the varnished rod.

Mr. Francis wonders why we "tamely submit to the tyranny of tackle-makers" in this match. Perhaps for the same reasons that we tamely submit to the "tyranny" of gun-makers, if the makers and boat-builders; for who knows so well how to build these various articles as those who make it the study and business of a life time, especially if the artificers be practical anglers, sportsmen or sailors, as the best once susually are, and who pursue their trade con amore?

Split bamboo rods must of necessity be varnished to preserve their elasticity and beauty. Think of a delicate split bamboo tip coated with sky-blue pain! The very thought is heresy, and an offense against the eternal fitness of things that would make even the spots on a brook trout blush more deeply crimson. American split bamboo rods are the finest made rods in the world, and the numerous foreign orders received by the manufacturers fully attest this fact, and show, moreover, that they are duly appreciated abroad, as well as at home, highly varnished and flashing though they be. The coming I ishery Exposition at Berlin will prove the superiority of American rods beyond all proadventure.

There is one feature of this subject that is peculiarly gratifying to me, and I heartily thank Mr. Francis for the article in question. It concedes the fact that fish, having eyes, can see, and are not the near-sighted dupes that most writers would have us believe; this concession could not b

TROUT FISHING IN CONNECTICUT.

TROUT FISHING IN CONNECTICUT.

I't was two o'clock one mild morning in the latter part of April, 1878, when my siarm clock called me from my slumbers for a day's trour-fishing. In about three minutes I was under the window of my neighbor sportsman calling him to action. Before I could get my steak broiled and coffee boiled, he was on hand. Breakfast over, we quickly left the house again in quiet and darkness, taking with us all the paraphernalia of our craft, including a substantial lunch and a jug of coffee.

A feeling of satisfaction came over us as we climbed the hills, and passed out of our village. We were leaving Rockville, in Tolland County. Its score of factories were at this early hour all quiet, its (6000 busy people at rest. The Hockanum River, which flows from Snipsic Lake though the place, is but a succession of mill-ponds.

We were scarcely out of Rockville when Snipsic Lake appeared in view in the faint gray dawn of the morning. This lake is a favorite resort for fishing and picnicing. Its waters are well stocked with black bass, perch and pickerel, and the State Commissioners have furnished several thousand land-locked sations, which seem to do well there. One of the salmon recently caught weighed four pounds. A little steamer, owned and run by Capt. Fred H. Thompson, plica around the lake during the summer months, and Capt. Thompson has cleared a grove and built a picuic resort, where shore dinners are served.

Then we passed through, Tolland, across the Willi-

grove and dunct a picture resort, where shore dunners are served.

Then we passed through Tolland, across the Willimantic River, and at length brought up on one of its eastern tributaries. By the time our team had been cared for, the sun was over the hills, and we felt somewhat of the spirit of the old gentleman who, when he was ready to go to the trout-brook, used to say: "Now, the man who can drive the fastest, take the reins," We hastened to the brook, and chose for our first casts a little pond, below which many years since there stood a sawmill. The partly broken dam yet holds back a little body of water, and the good will of the owner long ago made obsolete the sign "No fishing," which still adorns the old water-gate. We tried such flies as are likely to suit the caprice of the fish early in the season, but to no avail; yet our disappointment was largely tempered by

the knowledge that in the bottom of our pockets were two boxes of well-scoured worms, brought along for just this state of affairs. From past experience we knew that a school of trout were taking their morning feed where the brook runs into the pond. We wound our flies around our hats, after trying them till our consciences were satisfied, and placing on our leaders some hooks and snells which we had tied and colored with especial care, we baited well and casting both our lines at just the place where the last ripple of the brook's current was visible in the pond, found the fish at breakfast. Forgotten was every care and trouble of life, and the years of toil that have left more grey hairs than dollars. A tremor of pleasant excitement played through every nerve, and we felt only pity for the man who sees no sport in fishing. The trout continued to take the bait fill a baker's dozen of plump fellows, running from half a pound down, lay in our baskets. Then they ceased to bite and we could secure no more there. After taking out two more from under the old flume, we fished the brook down, through the woods, taking now and then a trout and enjoying to its full the beauty of the spring day, and all the sights and sounds such a day brings. Every ray of sunshine seemed to bring health and vigor after a winter of confining labor.

As we enjoyed our noon lunch and cigar in the forest beside a miniature cascade, we seemed to be as far removed from the haunts of mon as if in the wilds of

As we enjoyed our noon lunch and cigar in the forest beside a miniature cascade, we seemed to be as far removed from the haunts of men as if in the wilds of Maine. Then we fished back, up the brook, and tried the pend again in its deepest part. Following our usual practice, we started for home in time to avoid the darkness and chill of the evening. Our united basket counted twenty-eight and weighed about seven pounds.

The farmers in this section, as well as elsewhere, do not know; but the man who has by fairness and courtesy gained their esteem, will find the farmers of Tolland County as hospitable and as cordial as any class of men he meets. In many instances the only way thave been

County as hospitable and as cordial as any class of men he meets. In many instances the only way I have been able to repay the kindly services I have received, has been by presents that were accepted as tokens of good will, rather than as pay for entertainment and information. Under such kind and generous treatment the farmer's boy will give away his choicest secrets, will walk miles to show the quail that feed on his father's buckwheat, the best 'trout hole' in the river, or the little meadow brook where he caught or saw some 'big ones like those in your basket."

The basket of trout mentioned above is as heavy as one may ordinarily expect to take in a day, and often he will have to be content with his basket half as full. Yet we think to many it is more satisfactory than to incur a con-

have to be content with his basket half as full. Yet we think to many it is more satisfactory than to incur a considerable expense in time and money to visit some distant region, even though a trout rises to every cast, and the question is not how many can we take, but how many can we use. The air of our hills is just as healthgiving as any, and if our game and fish are less plenty and more difficult to capture, there is the more pleasure and more diment to capture, there is the more pleasure and satisfaction in their successful pursuit for that very reason. From April 1st to July 1st is now the open season in this State, but most of the trout are taken between April 15th and June 15th. From the exceeding mildness of the past winter and the abundant supply of water for the past year, there is a good prospect of sport this season. NUTMEG. this season.

The Remel.

New York Dog Show.—Express Arrangements.—
Editor Forest and Stream:—As the express companies have agreed to return all dogs free that have been exhibited at this slow, provided they have prepaid the usual rates charged by the different companies, I beg to suggest to exhibitors sending dogs to have them addressed carefully.

It is necessary that a chain and collar should accompany each dog. A competent and trustworthy man will be specially detailed off for all dogs coming by express, who will be provided with a sufficient number of attendants for the proper care of the dogs during the show. The entries close on the 12th of April; but as it greatly facilitates arrangements, exhibitors will confer a favor by sending them in as early as possible before that time. The prospects for a great and good show continue to increase.

CHARLES LINCOLN, Superintendent.

We understand that Sir William Verner, Bart., will send out several of his crack dogs-bulldogs and bullterriers—to the coming show, the great bull-terrier Tarquin being among the lot. Tarquin was bred by Mr. Vero Shaw, of England. The third edition of the "Dogs of the British Islands," by J. H. Walsh, Esq. (Stonehenge), contains a portrait of this noble dog. tries up to date are very much larger than they were last year. The show promises to be a very large one.

A GLADSTONE PUPPY.—Jackson, Miss., March 16th.—
Poor Otto was about eleven months old when he died. A
better puppy it was never my privilege to see—well
trained, dropping to shot or wing, he retrieved beautifully, and would quarter a field like an old dog. head up,
no pottering. Otto was the writer's choice of three puppies, the other two being a Jee, Jr., puppy (Tim), and a
highly bred lemon and white bitch puppy (Cosette), presented to the owner by a gentleman in Tennesse. The
owner of the three puppies, Mr. F. J., worried because
Otto would not retrieve, hence used the force method.
The puppy, before he was at all broken to fetch, was
taken out in the field, and retrieved the first bird shot
over him as only the best retriever can do. Ever after
he would disdain to fetch anything but a bird. Mr. J.
and a friend, Mr. Archie, were hunting over Otto and
Cosette one day. Having a covey of birds scattered,
Otto came to a point. "Now, Mr. Archie," said Mr. J.,
"take that shot." Mr. Archie, an elderly gentleman and
the best man in the world, walked up, kicking the grass
to flush the bird; up jumped an old hare, and made
they tracks up the hillside; Mr. Archie looking after
the hare as she showed him her white flag disappearing
over the crees of the hill, and Otto still at a stanch
point, "Well," exclaimed Mr. Archie, "that is a stanch
point on a hare, and where the hare has been. Why,

Frank, come here. What is the matter with Otto's eye?' Mr. J. came up and discovered a spot of mud entirely covering the dog's eye. He took his coat-tail and wiped Otto's eye as well as he could. The puppy released, stretched out to his old point. "Well," said Mr Archie, Otto's eye as well as he could. The puppy released, stretched out to his old point. "Well," said Mr Archie, "that is the stanchest point I cver saw for a puppy—where a hare has been. Come, Otto, old man, that is very beautiful, but it will never do to stay on Molly Cottontail's bed in that way, gone long ago," Mr. Archie patted the puppy, turning him clean around; still that point. "Well, this is the most remarkable thing I ever saw," said the elderly gentleman, kicking the grass in front of him. "See here, old man, there is nothing here; come away." Otto still held his point until Mr. Archie had kicked the grass far enough, and a covey of birds arose. To the credit of the elderly gentleman, be it said, he shot once and bagged his bird. his bird

his bird.

Otto is dead, and with him the promise of one of the best dogs that ever quartered a field. He died, I am afraid, of a mistaken diagnosis of his case. He was sick, but what his ailment was I could not tell. His owner feels his loss keenly. Otto was black and tan, with a white tip to the tail and a narrow white frill on the breast. The only fault I over found with him was a somewhat unusual length of tail. Hope my friend will get Otto's match soon.

GEO. C. EYRICH.

IMPOETED SKYE TERRIERS.—Mr. Hume, of the Eastern Shore of Virginia, has just returned from Eugland, bringing with him a pair of genuine sky terriers. The dogs will probably be forthcoming at the New York

IMPORTED SETTERS FOR THE MONTVIEW KENNEL CLUB. IMPONED SETTLES FOR THE MONTHER KENNEL CITES.— The steamer City of Richmond, which arrived here on the 9th inst., had on board three very promising young setters from the kennel of Mr. G. T. Teasdale Buckell, of Alford, Lincolnshire, England, from whom Mr. Dew has Alford, Lincolnshire, England, from whom Mr. Dew has received quite a number recently. Mr. Dew purchased these beauties from Mr. Llewellin, and they were consigned as usual to Mr. E. B. Goldsmith, of 58 Wall street. The setters arrived in good condition, and are as follows: Dashing Rake by Dash II., out of Norna; Count Nailer by Count Wind'em, out of Norna; and Dashing Plover by Dash II., out of Phantom. The dogs were at once shipped, per Adams Express, to Columbia, Tenn., where they arrived safely.

they arrived safely.

EXERCISE CHAIN WITH TRAVELER.—St. Leonard, P. Q., March 20th.—Every dog should be exercised daily, but many dog owners find it impossible to give the necessary time, and the poor dog is too often left tied up all day. If a dog is too valuable or savage to be allowed to run loose, I can recommend the following plan as giving the dog more liberty than he has when tied up in the usual manner: Get a piece of telegraph or fence wire, he longer the better; slip on it a strong iron ring, so as to run freely along the wire; set two stout posts in the ground about fifty feet apart or longer; let the tops of the posts be only about six or eight inches out of the ground; fasten securely the ends of the wire to the tops of the posts by strong stuple or through hole bored in the posts near the top; round off the rough edges of the posts at the tops so that the dog's chain vill not be likely to catch in anything. You can then fasten your dog's chain to the ring sliding on the wire, and he will have the full run of the distance between the two posts, and for the length of his chain on either side of the wire. The dog's chain to the swine the sure under the sammed to see that there are no flaws or breaks in it. The reader will see at once that this plan can be altered to suit the surroundines; the wire may be stretched like examined to see that there are no have or breaks in h. The reader will see at once that this plan can be altered to suit the surroundings; the wire may be stretched like a clother-line or from fence to fence. Watch dogs do very well so chained, as they can be given the run across a large garden or orchard.

The above excellent arrangement is worthy of the attention of all dog owners. By using a high-stretched wire and a chain of short length, dogs after being washed will be prevented from rolling until thoroughly dried, and yet be enabled to exercise enough to prevent catching

ESSEX COUNTY HUNT, LATE MONTCLAIR HUNT,

The fifth hunting season of the Essex County Hunt of New Jersey has opened most auspiciously. The first meet was aunounced for the 20th inst., at the kennel at Montclair, N. J., and the second yesterday, at the main entrance at Llewellyn Park, near Orange, N. J. The subscripton plan, which was adopted last season, has met with great success, and, in fact, the interest manifested in all parts of the county has led to the adoption of the new name. w name

newname.

It is hoped that those who are interested in the encouragement of the sport of fox-hunting, but who have taken no active part in the hunt, will now come forward and give the support that this healthful and invigorating pastime so well deserves.

The services of Mr. Harry Howard as huntsman have

The services of Mr. Harry Howard as alunisman have again been secured, and this, with an addition to the pack of fox-hounds, should attract a still larger attendance of ladies and gentlemen at the meets. It is particularly desired that there may be seen in the field a larger attendance of land-owners—particularly the young farmers—for the sport is one that should be made peculiarly their own. liarly their own

Weather permitting, the meets will take place twice a week, in accordance with the following list of appointments:— Saturday, March 27th, at 4 P.M., at Mr. N. Sullivan's,

Montclair.
Wednesday, March 31st, at 4 P.M., at Liewellyn Park

nam entrance). Saturday, April 3d, at 4 P.M., at Verona Post Office. Saturday, April 10th, at 4 P.M., at the Common, Bloom-

Wednesday, April 14th, at 4 P.M., at Mr. William F. Kidder's, East Orange. Saturday, April 17th, at 4 F.M., at the Hamilton House,

Saturday, April 21st, at 4 P.M., at South Orango.
Wodnesday, April 21st, at 4 P.M., at Llewellyn Park
(main entrance).
The hunts are open to every one, and all attending the

meets will receive a hearty welcome. Frederick M. Wheeler is master of foxhounds. The following are the officers of the Hunt and the list of well-known subscribers:—President, Mr. C. W. Nason; Vico-President, Mr. C. A. Heeksoher; Secretary, Mr. H. N. Minn: Treasurer and Master, Mr. F. M. Wheeler. Subscribers:—Messus. C. W. Nason, F. M. Wheeler, N. Sullivan, Dr. J. W. Pinkham, William H. Power, of Montclair; A. Vanderbilt, J. A. Blaur, C. A. Johnson, of New York; C. A. Heekscher, D. Robinson, F. E. Martin, E. P. Thebaud, of Orange; H. N. Munn, George Lethbridge, Alexander Hudnut, Llewellyn Park; William F. Kidder, of East Orange. of East Orange.

Worms in Doos.—Toronto, Canada, March 14th.—I don't say it is a specific, but once, by accident, a dog of mine eat heartily of a curry and voided a lot of worms. Another time, in camping, seeing the coat starting, and other symptoms—no areca nor sautonin being at hand—I administered a dose of "India Curry Powder" with marked and good effect. When other remedies fail, or are not at hand, this might be tried. Probably the curry acted as an irritant, in the two cases quoted; but would have no effect on dogs of a different constitution.

H. B. H.

It is remarkable for a dog to eat curry of his own accord. Your view is undoubtedly a correct one, as the curry powder contains causicum.

BARE SPOTS ON DOOS.—St. Leonard, P. Q., March 14th.—In your "Answers to Correspondents" I often see people asking for a recipe to make the hair grow on bare places on dogs. Now I have tried coal oil frequently on cuts and wounds, and I always found the cut to heal cleaner, and the hair to grow quicker and smoother afterward on wounds so treated, than by any other way I have tried. I own a very quarrelsome bull-terrier, acatterward on wounds so treated, than by any other way I have tried. I own a very quarrelsome bull-terrier, accustomed to follow my huggy, and I often have occasion to borrow the oil-can at farmers' houses along the road. A friend of mine had a very old cat that had lost most of its hair from old age. He tried the coal oil, and after one application the hair commenced to grow again, and soon puss had as fine and glossy a coat as sever. I may mention that the cat, decidedly objected to the whole business, and was very lively for a day or two after being rubbed.

KENNEL NOTES.

NAMES CLAIMED.—Nellie H.—Mr. C. F. Huntsman, of La Crosse, Wis., claims the name of Nellie H. for his rod frish setter bitch out of Mr. Geo. B. Classon's Queen, by Mr. E. C. Waller's Res. Nellie H. was whelped July 10th, 1879, and is now in the kennel of

Nellie H. was whelped July 10th, 1879, and is now in the kennel of T.M. T. McKennan, of Toledo, Iowa.

Floss II.—Dr. H. B. Wygant, of Poekskill, N. Y., claims the name of Floss II, for bis liver and white cocker spaniel bitch, whelped Feb. 6th. Presented by Mr. J. B. Harrington, of Buffalo, N. Y., out of his Floss, by Mr. Hatter's Con.

Laulphird.—Mr. Bradhury also purchased from Mr. Geo. Pounall, of Christiana, Pa., the bitch pup Ladybird, by Mr. Pounall's Dan out of his Bess. Both of these beagles are well-known prizewinners. Gess and Ladybird have full pedigrees.

winners. Gess and Ladybird have full pedigrees.

Myra-Kate-Mr. Henry W. Livingston, New York, has purchased from Mr. E. J. Robbins, Wethersfield, Conn., a very fine all red Irish setter bitch pup, whelped July 1st, 1879, by Dick Hatteralek, out of Tyke, and claims for her the name of Myra. Mr. Livingston has also purchased from Mr. Chas. F. Kent, Bingham-Livingston has also purchased from 3rt. Oats. F. Neat, Diffiguation, N. Y., the red I rish setter birch Kate by York, out of Maud, and her two bitch pups by Bob (Plunket-Carrie).

Feather—Mr. F. F. Pitcher, Claremont, N. H., has purchased from Mr. Henry W. Livingston, New York. the liver and white

ticked cocker spaniel bitch Feather, winner of first and special prizes, New York, 1878; first, New York, 1879, and second, Phila-

Archery.

THE USEFULNESS OF INDOOR PRACTICE.

BOSTON, March 13th.

Fattor Forest and Stream :-

Editor Forest and Stream:—
Having heard it stated by several of my archer acquaintances that indoor practice at forty yards would make no increase in one's score when they come to shoot at longer distances. I have written this article to show that they are mistaken in their ideas. The 1st of last November the archers of Boston and vicinity were fortunate enough to secure a hall suitable for indoor practice during the winter. The hall was sufficiently wide to accommodate four targets, two being used by the ladies at thirty yards, and the other two by the gentlemen at forty yards. The clubs represented were the Hawthorn Archers, of Boston Highlands; the Pequossette Archers, of Watertown; and the Jannica Plain Archers, of Jamaica Plain. Beside members from these clubs there were quite a number who were not members of any club.

Archers, of Jamaica Plain. Beside memoers from these cibbs there were quite a number who were not members of any club. On account of the poor light on dark days, and the dazzling effect produced by the bright colors on the targets when the gas was lighted, the colored facings were taken off, and in their place we used a plain white facing, with a black or red center the place we used a plain white facing, with a black or red center the size of the gold, and with narrow black lines to mark off the tarsize of the gold, and with narrow black lines to mark off the tarsize of the gold. size of the gold, and with narrow black lines to mark off the far-get. These were pronounced a success by all, and they are cer-tainly better to shoot at, as the arrows can be more readily pertainly better to shoot as a stantage of the one's attention on a single dark spot on a white surface than it is on the gold in the midst of

dark spot on a wine strate.

During the last two or three months the shooting has been teadily improving, and it is quite pleasing to compare the present scores with those made earlier in the season, and more especially with those made out-of-doors during the months of September 1.

tember and October.

ENot having the scores of as many archers as I could wish, I shall be obliged to depend almost entirely upon my own scores for this

be obliged to depend almost entirely upon my own scores for this article.

Upon looking at my score-book, find my average with thirty arrows, provious to shooting indoors, to be as follows:—Forty pards, 130: fifty yards, 81; slxty yards, 87; my best scores at these distances being 181, 111, 76 respectively. The last of November, after one month's practice at forty yards, 1 find that my average has increased from 130 to 150 points. Upon looking at my scores for December, 1 find 1 have gained 22 points, and that my average for the month is 172, my best round 214, thirteen of the fifty-one rounds shot being over 180 points.

I For January my average is 184, with 214 as my best score, closely followed by nie more of 200 and over—more than one-third of the scores shot being over 200 points. For February my average is 187 and my best score 218, nine of the thirty scores shot being over 200 points each.

The number of misses grows smaller and smaller as the scores increase, and while I used to get two or three misses out of every hirty arrows shot in the fall, I seldom get more than two or three out of 500 arrows, and at one time had a score of over 1,200 arrows at forty yards without a miss.

rows at forty yards without a miss.

rows at forty yards without a miss.

From the above schedule it is plain that steady and careful practice at any range will make an archer more skilled at that distance, but of what use will this practice be when he comes to shoot the longer distances, and out of doors where he has the

wind and the different kinds of weather to bother him?

Last Tuesday evening, with a very trying light and strong wind and shooting in a heavy overcoat, I shot a round at sixty yards,

and got as a result 112 with thirty arrows. The next morning ander the same conditions, and with the thermometer at 16 degs., I shot two rounds, scoring 104, 114. This gives 110 as an average of my three scores and a gian of fifty-three points over my aver-

age of last fail, my worst score this year being twenty-eight points better than my best score of last year. From the above it is pretty evident that the practice at forty yardabas made a great improvement in the sixty-yards shooting: yarca loss made a great improvement in the sury-yarda shooting; and although the practice at the shorter ranges is not as beneficial as it is at the longer ranges, still the archer by constant practice gets the habit of drawing and loosing smoothly, and this is one of the most important things in archery. Upon looking over the scores of one of the gentlemen archers who commenced shooting the last of December, I find that his expensed in the state of the production of the production of the score of the second of the score of the second of the score of the second of the second of the score of the second of the score of the second of the score of the second of the score of the second of the second of the score of the second of the score of the second of the score of the second of the score of the second of the score of the second of the second of the score of the second of the score of the second of the score of the second of the

wao commenced smooting the ansi of Decommer, into must insaverage at forly yards for January is 100, and for Fobruary 157, a gain of twenty-eight points. This archer has been shooting out of doors lately, and with no previous practise has been making scores of 80, 74, 90, 70 and 76 at sixty yards, and 27, 102 and 14 at fifty yards. He has also shot three American Rounds, getting nity jards. He has also shot three American Rounds, gotting 318, 32 land 433 as result, the last being as follows:—forty yards, 141; sixty yards, 190; â'ty yards, 141; sixty yards, 190–433. So far this month this same irreher has an average of 104 at forty yards, a gain of twenty-seven points over last month's scores.

Here, then, is an example of an archer, who by constant and careful practice at forty yards has trained himself, so that after he

ful practice at forty yards has trained himself, so that after he has got the elevation and position necessary at the longer ranges he finds it not much more difficult to shoot at fifty or sixty yards than at forty. Quite a number of the gentlemen have increased from an average of 120 to 160 points, and several average still higher, and thave no doubt when they come to shoot at the longer ranges they will find their indoor practice of great value to them. The ladies have also made a great improvement in their shoot

ing and scores, and several have advanced from an average of from 90 to 100 to an average of 130 to 140 at thirty yards. Several ores of 170 and over have been made, and one lady has made

As the spring draws near and the season for out-door shoot-ing approaches, several of the archers have taken home their bows and arrows in readiness to take advantage of any pleasant day which may present itself, and although the hall is not as well patronized on pleasant afternoons as formerly, yet the evening is sure to find a jolly party drilling out the center of the targets at short ranges.

Many of the archers have expressed their intention of shooting

at the ranges of the York Round this summer and I have no doubt but that the readers of the Forest and Stream will see some good scores reported from this section before the season is

"ROUNDERS" IN ARCHERY.—New York, March 18th.—Editor Forest and Stream:—In your issue of to-day, and under the above heading, appears a communication, the signature of which would neading, appears a continuination, the significative of which which imply that its author had been refused admission into the New York Archery Club on account of the resolution alluded to. Insemind as blackballing is always and under all circumstances a right unpleasant to exercise, it is but just to the organization in question to state that all is last meeting, which I attended, and the very one at which the resolution was passed, of the seven can-didates who applied for membership, seven were admitted and none rejected. I therefore fail to see where the "bouncing" comes in. The mythical "Bounced" also falls into the error of attributi

The mythical "Bounced" also falls into the error of attributing the action taken solely to a desire "to prevent the claims of other clubs to a share of the honors won hereafter," thus conveying the impression that the N. Y. A. O. has been actuated only by presumptions and selfish motives, whereas the reasons leading to such a step are so numerous that it would be uscless to present rediscuss them here. Whether the position assumed by the N. Y. A. C. Saor is not premature remains to be seen. It is certainly sound, and one which, in my estimation, other clubs in New York and vicinity will eventually be forced to take it they wish to enjoy vigorous growth as distinct organizations, and thus promote the seeneral interests of archery as a sport.

Joy vigorous growin a distinct organizations, and thus promote the general interests of archery as a sport. It exclude many "desirable" members it is difficult to determine without knowing in what sense your correspondent uses the quoted adjective. In regard to its "keeping the club in the background during the summer matches." I for one willingly would run the risk. The club is certainly too young and too modest to aspire for victory in is certainly too young and too indicest to uspire for vitory in every match it may take part during the approaching session; but "Bounced" evidently knows little about the N. Y. A. C. and the purposes that animate its members, if he thinks defeat would have such demoralizing and depressing effects as to so readily force it into the background. Let him live and judge for him-A MEMBER OF THE N. Y. A. C.

himself.

New York Archery Club.—Yev Pork, March 224.—A team consisting of Mrs. Dr. De Luna, Miss E. T. Morton, John W. Sutton, S. S. Roper, Wm. H. Frazer and Jas. W. Auten, Jr., will shoot a match next Saturday evening at the Ninth Regiment Arabory, with a team of the North Side Archery Club of Chicago; 90 arrows; 30 yards. The shooting will commence at 8 o'clock in each

-Editor Forest and Stream:-In your t A CORRECTION. A CORRECTION.—Edllor Forest and Stream:—In your notice of the organization of the Manhattan Bowmen it was stated that this new club practices in the Ninth Regiment Armory with the New York Club. As this statement might give rise to errors, leading perhaps to awkward results, I bog to state that since January last the New York Archery Club has had the exclusive use of the Ninth Regiment Armory, who_{II}, however, they have always en-tertained as guests individual members of other clubs; a practice tertained as guesis individual members of other clubs; a practice which will be continued in the same manner and with equal cor-

diality.

After our next meeting I hope to make full report of our action regarding admitting members of other clubs and placing such members upon our team.

Jas. W. Auten, Jr. such members upon our team.

HORSMAN'S SPANISH YEW-BACKED BOWS.-Mr. E. I. HORSMAN HORSMAN'S SPANISH YEW-BACKED BOWS.—Mr. E. J. HOTSMAN showed great enterprise in the manufacture of fine bows as well as arrows. Last fall he sent his superintendent to Europe to personally select the choicest yew obtainable. He is now turning out some backed yew bows, which are enough to make an archer's mouth water. Their shooting qualities are superior to any hard-wood bows, and they cost much less than fine self-yews. Send for his new price list.—I dan. for his new price list .- [Adv.

for his new price list.—[Adv. A Good Segostron.—Cheago, Ill.—Editor Forest and Stream. In reading the urchery news contained in your columns weekly, I notice that nost of your communications relate to archery tackle, and comparisons of different makers, or discussions relative to changing the system of secring adopted years are. And, by the way, if we change the present system to that suggested by some of our friends, we lose all opportunity of comparing our scores with those made in the past; and in regulating it to the scientific principles proposed by some, it would eventually lead to that which about do exclude the avoided, i.e., a tendency to become proficient to

such an extent, that, before we are aware of the fact, we will find a professional element appearing which will, as it has in all other American sports, detract from the amusement as a pastime. But I am leaving the subject I proposed to mention, so will return to it and leave the discussion of the above to those more capable of handling it than I. What I wish to call your attention to, is this: That while these pen contests are taking place, we hear compara-tively nothing of that which no doubt will interest a majority of your archery readers more, and that is, in regard to how clu and societies are progressing throughout the country, whether there is much practice being indulged in these cold months indoors? We see almost every week scores published as made by New York, Brooklyn and Boston clubs, but with these few exceptions, scarcely anything is heard. Now the West is the acknowledged home of archery in this country, and to my knowledged there are practice shoots tasking place occasionally in this city and vicinity, and no doubt in other western cities. Why then do they not send in their scores to you? also an item concerning indoor shooting, and so by comparison give others an idea whether state practice is hereficial or otherwise. Every writer in and societies are progressing throughout the country, whether short range practice is beneficial or otherwise. Every archer no short range practice is benencial or otherwise. Every arcular in doubt has, to a certain extent, different experiences in this regard, and we would like to get them. I am an enthusiast, and shoot regularly two evenings in a week, and I find that at hirty yards. I steadily improve with practice; and after practicing steadily a thirty yards. I tried shooting at longer distances and found that my scores had proportionately improved at long range. This could be a state of the indoor. This convinces me that those who avail thomselves of the indoor practice are the ones who, when weather permits of outdoor shooting, will surprise older archers (who have "rested on their oars" as it were) with their scores at long range. I have written more than I intended. Won't you use your persuasive powers (which you know so well how to use) to the end that others in different localities will communicate with you, and inform us through the columns of your valuable journal of their progress and experience at the indoor short range?

T. A. L.

and experience at the indoor short range?
TENSIS AND ARGHERY CLUT OF ELIZABETH.—This club, of Elizabeth, N. J., is now organizing with a membership limited to stay, thirty ladies and thirty gentiomen. The Edgar estate, on Weet Jersey street, has been leased, and there it is proposed to ractice lawn tennis, archery, croquet, etc. Meetings will probably be held twice a week.

CINCINNATI ASSOCIATION .- Cincinnati, Ohio, March 12th. herewith hand you result of an exhibition and team shoot of the herewith hand you result of an exhibition and team shoot of the Cinelmant Archery Association, which took place last night (Thursday) at our Exposition Building, the ranges being 40 and 59 yards. In connection with the same I must state that none of the archers shot anywhere near to their regular scores, it also being more difficult to shoot by gaslight than at daytine. CHAS. R. WILD'S SIDE. -18t 40 Tds. -2d 40 Yds. -50 Yds. - Total.

Gricket.

The Chester City Cricket Club of Pennsylvania has elected the lowing officers for the season of 1880: President, W. W. Wood; following officers for the season of 1880: Preside Secretary, Isaac Rodgers; Captain, John Griffin.

-The Hargreave brothers have resigned from the Germantown Cricket Club

-The Girard Cricket Club of Philadelphia is in a most flourishing condition, its membership exceeding one hundred names. At the recent election the following officers were elected for this year: President, N.F. Tomilia; Corresponding Secretary, S.M. Lovitt; Financial Secretary, J. Wilkinson; Treasurer, Henry Hayward.

THE PORT HOPE CLUB.-There is some likelihood of the Port TEE PORT HOPE CLUB.—There IS some likelihood of the Port Hope Cricket Club being dissolved, because of their lease having expired, and no likelihood of a renewal being granted. It is to be hoped this club, which has a good reputation, will not die for want of a cricket ground. Let the Port Hope folks bestir them selves in getting a new field for their excellent club.-Toronta (Hobe.

THE NORTHWESTERN CRICKET TEAM,-Mr. H. Miller, Secretary THE NORTHWESTEIN CREAKET TEAM.—Mr. as. successful of the Canadian team which is to visa England this season, writes that besides the West of Scotland, at Glasgow, and Marylebone at London, fixtures, arrangements have been made to play the Manchester and Scarborough. The at London, fixtures, arrangements baye been made to play matches at Leeds, Longsight, Manchester and Scarborough. The team is now selected, and with one or two exceptions is conposed of Canadiaus, the exceptions being English residents. re not at liberty to publish the list of players at present, but it will appear in due course in this column.

BALTIMORE CRICKET CLUB.-The Baltimore Cricket Club has been in existence for about five years, but it was only last year been mexistence for agout live years, out. I was only hat year that a permanent ground was rented at the village of Mount Washington, about five miles from Baltimore, on the Northern Central Railway. Hitherto a match with a club from another city has been a rare occurrence, and more remarkable for the exee of the lunch than the cricket. Last year the game made cellence of the lunch than the cricket. Last year the game made a decided advance with the assistance of a good professional. Boys of fitteen showed that they could learn more in a month than men of twenty-live in a year. During last season the club played oight matches, losing six and winning two. The matches played oight matches, losing six and winning two. The matches lost were against representative olevens of the Staten Island, Young America, Germantown and Chestnut Hill Clubs, and in no instance was the game more one-sided than those played by these clubs among one another. The batting averages for the season were fair, F. K. Casey, hard hitter, being first with about If, and W. Y. Perot, a pretty left-handed player, second. Olidnan. 17, and W. Y. Perot, a pretty left-handed player, second. Oldham, the professional, is a very good medium-pace, round-arm bowler, and did very well in every match. P. R. Reese, an old catcher at base-ball, came to the conclusion that cricket was a good game, and set to work in carnest to become a good wicket-keep, with every chance of a brilliant success. The progress of cricket is proverbially slow, and the Baltimore (flub is no exception. At last, however, if seems to be started, and the officers of the club will spare no pains to have the ground and the players in such condition that clubs from Philadelphia and New York will continue their writes and flud good course, tellsket, to nume condition that clubs from Philadolphia and New York will con-tinue their visits, and find good cnough cricket to imuse them. Officers:-President, J. H. Loe: Vice-President, T. K. Carey; Secretary, Tunstall Smith, 28 St. Paul street; Treasurer, Randolph Winslow; Captain, John E. Carey; Ground Committee, J. H. Lee, T. K. Carey, Tunstall Smith, Randolph Winslow, Wil-llam C. Pennington, William Y. Perot, John B. Carey, Howard Ridgely.

CRICKET IN OREGON .- Portland, O., Jan. 16th .- The present CRICKET IN OREGON.—Portland, O., Jan. Buln.—The present Portland Cricket Club was organized two years ago, and is now a good, healthy institution, with a membership of over fifty; and this year we expect to be refenforced materially by some fine, aturdy players who have arrived in Oregon since last season closed. Our position is rather isolated as yet, as we are the only club in the State, and are about 800 miles from San Francisco, and nearly like distance from Victoria, B. C., in both of which a nearly like distance from Victoria, B. C., in both of which places cricket is in a flourishing condition; foreign matches, as a consequence, are luxuries which we cannot often indulge in. We did manage to send an eleven over to Victoria last summer to "beard the lion in his den," but the lion gave us a terrible mulling, extracting the sting from our wounds, however, by the general terriblety with which he authorized us. The Victoria set ing, extracting the sting from our women, nowever, or the generous hospitality with which he entertained us. The Victorias are to come over here and tackle us on our own dunghill next 4th of Ally, when we hope to give a better account of ourselves. There is a club forming now in Corvallis, about 80 miles from Portland, and we hope to have one or two friendly tussies with them during the year. I send you scores of two matches which were the most interesting of those played last summer. The American elevens were composed of members born on this continent, a number of them being Canadians. The other sides were men born on the other side of the "herring pond." The games were both decided by the first innings. Yours, respectfully, GEO. A. WEBB. and we hope to have one or two friendly tussles with them during [We publish the scores, even at this late day, that the cricketers

of the East may know that the game is finding favor and support in the far nor west.—Ed.]

THE AUSTRALIAN CRICKETERS.—It is expected that the second of Australian cricketers will arrive in England early in May team of Australian cricketors will arrive in England early in May. Already a rrangements have been made to play a considerable number of matches, but the majority of these are against odds. The eleven-a-side contests yet fixed are with Gloucostershire, Derbyshire, Leiccstershire, Sussex and the Orleans Club at Twictocham. A match between the Australians and Daft's American Team will yery likely be played during the summer. The matches against odds are as follows:—Dublin (Trinity College), Belfzst, Newcastle-on-Tyne, Broughton (Manchester)

Crewe, Burnley, Birmingham, Oldham, Hustings, (Manchester, Yeadon (near Leesly, Stochport, Northampton, Swindon, Malton, Dewsburry, Holbeck (Leesly, Rochdale, Scar-borough, Harrogate, Blackpool, Sunderland, Huddersfield, Hull, Middlesborough, Swansea, Buxton and Reading.—Bell's * 1fo.

Auswers to Correspondents.

W. O.'M., Fort Wayne, Ind .- We have given your letter to the

J. K. B., City.—Are there any black, white and tan thorough-bred Gordon setters? Ans. Yes.

WERR Nashua, N. H .- The N. R. A. of this city will send their rules and regulations to persons desiring to organize a rifle club

E. H., Toronto.—We have all papers regarding the Cricketer's Association of the United States, and will be pleased to furnish Information regarding same.

J. S. G., Union Church, Miss. We will publish your scores with pleasure. For skass balls and the trap described we must refer

J. S. G., Union Church, was. We wan publish your scales with pleasure. For glass balls and the trap described we must refer you to our advertising columns.

E. V. W., Stamford, Conn.—The pointers you refer to were bred many years ago by Mr. Herman Buncroft, of Quaker Hill, Conn. They were very fine, and splendid goers.

STUMPS, Camden, N. J.-We are unable to tell you why the Har-greave brothers have resigned from the Germantown C. C. The Hargreave is undoubtedly the second best cricket family in the United States, the Newhall's coming first,

BEACONTREE, Bridgeton, N. J.-Is there a book published on BEACONTREE, Briggeon, N. A.—Is there a book phoneact on he subject of the setter? If so, will you please tell name. Ans. The Setter," by Edward Laverack. We can furnish it. A. R., Cape Girardeau, Mo.—We never heard of the method the subject of the setter?

you write about. The procedure suggested by your friend is both barbarous and unscientific, no matter what the results may be.

I A G. Pittsburgh, Pa - 1. Impossible to give cause of death from your description of symptoms. 2. Are there many ducks it the Sandusky marshes during April? Is it a good place for them: Ans. Yes.

W. D. C., Poughkeepsie, N. Y.—Canoe clubs in England are organized with Captain, Mate and 21 Mate. In America, generally, with Commodore and Vice-Commodore. With less than fifteen canoes, two officers are quite enough. SPEED.-Steel hull, Herreschoff coil boiler and an English rotary

engine would be our choice for a small fast launch, if expense is no object. Such a rig would combine lightness, compactness, simplicity, efficiency.

I. H., Coxsackie, -My red setter dog, sixteen months old, has no appetite; has a dry cough and is very thin. What shall I do for him? Ans. The symptoms given not sufficiently clear to base a correct diagnosis. Write more fully and we will reply at once.

B., Philadelphia.—Are there any black, white and tan thoroughbred Gordon setters? Ans. Yes; black, tan and white were the original colors of the Gordon setter as bred at Gordon Castle. These colors are still preserved and sought after by certain fanciers in England.

R. W., Franklin, Del. Co., N. Y.-If you want to employ an agent to import dogs for you and to make all necessary payments, you cannot do better than address Mr. E. B. Goldsmith, Custom House and Forwarding Agent, 58 Wall street, this city, Many of the best dogs in the country have been consigned to him.

Only if the best logs in the control hardware consider of the control hardware control hard and canvas-back ducks.

J. A. O., Boston, Mass.-What book will best tell me how to d. A. O., Boston, Albas.—Vint book vin bese ctribenson de-train the cocker spaniel, feed him, etc. Ans. Hutchinson de-scribes how spaniels are to be broken and bandled. We know of no book devoted solely to the spaniel. Feed old dogs but once a day; pupples require food more frequently. Table scraps of meat and vegetables only, make good neas s.

STATEN ISLAND.—Yes, we are opposed to revolving in this country. England and America are two different places and governed by many different customs. We are against twelve men playing the cricket of New York grainst foreign elevens, where twentywo local club members should be represented; and both the St George's and the Staten Island clubs stand on their own merits.

George s and use Staten issand cutos stated on actif own interies.

G. B., Now York. -1. Will you oblige me by letting me know how to get a dog into condition for the New York show? 2. What should a one-and-a-half-year-old setter dog weigh? Ans. 1. Feed the dog carefully and groom him thoroughly well every day. If you want to enter into the matter particularly, see Vero Shaw's "Book of the Dog," No. 2. Cassell, Petter, Galpin & Co., 586 Broadway, are the publishers. 2. From forty-five to sixty-five

S. S. H., Galesburg, Ill.-1. I am going to buy a Bailard rifle,

S. S. H., Galesburg, Ill.—L. I am going to buy a Balbard rifle, and would ask you which caliber you would prefer, 40 or 45. I want it for deer and bear hunting. 2. Would you try the everlasting shells? 3. I have a Smith & Wesson .38 cal. latest style; is it large enough for bett use in the country? 4. Please give me the address of some one that solid life preservers? Ans. I. Forty-five cal. 2. Yes. 3. Yes. 4. See our advertising columns.

A. R. B.—To dye canvas for a cunoe a dead-grass color, boil in a bath of two pounds ferrouyantide (yellow prussiate) of potussay wring out half dry, and then boil in a solution of half-pound of sulphate of copper in ten gallons of water. To keep off the dippings from a double-bladed paddic-put on leather sleeves or cups' loact as "stop-waters," about two feet three inches from; the center, Size of pattern target for shot gun is a circle of 30in, diameter, for a distance of 40 yards. ter, for a distance of 40 yards.

E. S. C., Momence.—We have no definite information concern E. S. C., Momence.—We have no definite information concerning the application of crude petroloum to small steam boilers. The Brayton Motor came to the surface some time ago, but we have no results to report. Doubt if you would economize by using petroleum. The fault is probably in the construction of your boiler. The heat escapes up the chimney or you have not enough heating surface to utilize it. Petroleum (crude) is at all times dangerous. We should prefer a "Herreshoff coll" for small launches. See last issue.

launches. See last send.

B. C. M., Owen Sound.—1. What quantity of areca nut shall I give to dog three months old? 2. To one five months old? 3. Where can rife sights be procured? Ans. I. You neglect to state breed of puppy; we therefore suggest that you administer the following vermifuge in a little milk after fasting: Powdered areca nut, one scruple; santonin, two grains. Repeat does again in a week. 2. Two grains of areca nut to each pound of dog, fol-

owed several hours later by dose of castor or olivefoil. The nut should be given the dog after ten hours' fasting. 8. See advertising columns

J. S. G., Waynesboro, Ga.-My pointer bitch, aged nine or ten J.S. G., Waynestoro, Ga.—My pointer inten, aget nino or ten years, was found this morning paralyzed; has no use of the limbs in any way. Sho is very fleshy, good appetire, eyes clear, perfectly healthy to all appearances. When lying on her side can lift, her head only an inch or two. For more than a year, at times, site would fall lame for a few days. My physician says "theumatiem." would an lame for a few days. My physician says "meanatem." Has had two for three fits in the past year. Sho has pupples shout cight weeks old, all weaned and carried away but one. Ans. Probably paralysis, the result of effusion of blood into the brain, and at her age it is not likely any remedy will be effications.

A. F., Manistee, Mich.—My spanied has a habit of nipping his back and rump until it becomes irritated and very sore; also secretices himself constantly. In summer is much worse, with cars much irritated and running a little. Ans. Your dog has mange, caused probably by overfeeding. Put a muzzle on the curs much irritated and running a little. Ans. Your dop has mange, caused probably by overfeeding. Put a muzzle on the dog to prevent gnawing and rub well into the sore places a little of the following salve: four cunees proto-iodine of moreury, one ounce of tar, mixed with one pound of lard. Give five drops in water of Fowler's solution of arsenic twice a day in feed. This disease is contagious. Feed no meat and give vegetables with dist. Write again if the dog is not better.

WHI again II the dog is not better.

H. M. H., Cincinnati, O.-I. I have an Irish setter dog about three years old, whose eyes in the morning are always full of matter, and look red. He is in good condition, not too fat, and is fed on very little meat. What shall I do for him? 2. The Sectet herrier you prescribed Fowler's solution of ursenor for yot well, and his hair came on, but he was changed from a sky-blue wen, and an an array came on, out to was canager from a species with fine sliten hair into a black and straight-from a species as I ever start saw. How do you account for that ? Ams. I. Feed no meat at all. Except boiled liver twice a week. Wash the eyes with tepid water, and then use a little ver week alum water. 2. Some attention in the nutrition of the hair bulbs, probably.

J. A., Barrytown, N. J.—My water spaniel must have received an injury in the ear. I noticed a swelling over the eye; since that an injury in the ear. I noticed a swelling over the eye; since that time the swelling has increased and now is about as large as a man's fist. It is now quite soft, as if full of uniter. I began to apply liniment composed of arrice, Pond's extract and laudanum; but finding that there was quite a lot of host about the head! have used Pond's extract only during the last day or so. The eye situated under the lump runs continually. Appetite The cyc situated under the lump runs continually. Appetite poor for the last few days. Ans. The probabilities are that an abscess has formed, the result of the blow or injury. It should be opened at once and washed out twice a day, so long as any matter continues to flow, with a weak solution of carbolic acid and water—one part of acid to forty or afty parts of water. Give dose

of Glauber's saits, say, two large teaspoonsful.

W. F. C. West Newbury, Mass.—I. How often does a young bitch come in heat?

3. Are bitches better in the field than dogs? biten come in heat? 3. Are bitches better in the field than dogs? 3. Which would you advise me to get, a pointer or a setter for woodcock, ruffed grouse and quall shooting? 4. What kind of a pointer or setter is the best and quickst to teach? 4. Ans. I. About twice a year. 2. No. 3. It very much depends upon what section of country you intend to shoot in. For Western shooting we much prefer pointers, but in the East both breeds have their own much prefer pointers, out in the pasts both breeds and their own recommendations. Pointers can stand the heat much better than setters, and suffer less during summer cock-shooting. "You can pay your money and take your choice," as it is a more matter of fancy. 4. The best bred dogs are the best. Pointers when once thoroughly broken, if judiciously handled, remain so. Whether you decide upon either setter or pointer, select a puppy whose sire and dam have both been good field dogs.

sire and dam have both been good field dogs.

J. Q., Boston, Mass.—J. I have a dog that has the red mange; ft turns the skin pink. What shall I use? 2. Have tried several remedies; is kerosene dangerous? 3. He is seralching and uneasy all the time. Is it contagious? Ans. I. Try Glover's mange cure, which you can get at John P. Lovell & Sons. Dock Square, your city. As you neglect to state whether the dog is a toy-terrier or a bloodhound, it is impossible to suggest further treatment. Doses of Fowler's solution of arsenic should be given with food three times a day, the quantity to depend on size and breed of dog. 2. You should have stated the remedies which have failed. It depends very much what you do with kerosene whether it is dangerous or not. It should not be given internally

breed of dog. 2. You should have stated the remedies which have falled. It depends very much what you do with kerosene whether it is dangerous or not. It should not be given internally or rubbed on the dog's coat and "touched oft." 3. Mange is yery contagions, and all kennels where it exists should be thoroughly scrubbed and washed with carbolic acid, the straw bedding burned, and the dog's quarters fumigated with sulphur. Write fully, and we will do what we can for you.

X. E. Y., Goshen, N. Y.—I have a highly prized Italian greyhound that met with a very scrious accident about two weeks ago. I have formed the theory that the dog had gone inside the gate, and after I had passed, it had starled on a rapid run to overtake me when, in the dard, it ran against the gate-post, and the shock was so great as to injure the spine. It was several days before it could use its head and shoulders at alt: in fact it could hardly be moved without causing extreme pain. I family succeeded in reducing the swelling and driving away the stiffness in part by the use of hot water packs and the application of iodine the whole length of the spinal column. The dog at present can ge around quite weil, but has to hold its head in a very straight-ened manner. Ans. The injury was not as great as you supposed, ge irround quite weif, not has to not its near in a very straight-ened manner. Ans. The injury was not as great as you supposed, being confined to the muscles and superficial nerves. The treat-ment was correct, and the dog would seem to be well on the way to recovery. We would recommend the use of some mildly stim-ulating Holment.

W. W. P., Brooklyn.—The Connecticut River is navigable for cances above Well's River. The current is strong and often broken by rapids and rips. The Bubble, of the Jersey City Canos Club, in summer of 1873 run down from Wheeler's Mills, on Hall's stream, one of the most northern tributaries, to Saybrook scream, one of the most norment troudings, to styproce. The canoelist should portage up and cruise down the circe. The follow-ing are the bad places: Beecher Falls, at the month of Hall's Stream; short rapids jost below, and at foot of rapids around a bend the West Stewardstown mill pond and dam, which must be bend the West Stewardstown mill pond and dam, which must be portaged around. Healey Falls, four miles below Colebrook, N. R., run. Lyman Falls, one and a half miles below Healey, two or three miles long, can be run. Oecasional rips to North Stratford. Outlidant dam; carry around on west bank. Fifteen-Mile Falls, twenty-six miles long; have been run, but are dangerous at times. McIndoo's Falls; Dodge's Falls. These three may be avoided by railroading from South Lancaster to Well's River, Vermont. White River Falls are three abover rapids and two falls. B. F. Caswell, Hanover, N.H., near Bridgovide, will portage cances, charges freenty-five cents. Queechee Falls, five or six miles above Windsor. There are small rapids five or six miles above Hellow's Falls, Turner's Falls dam, and three miles of rapids John J. Emery, Turner's Falls of the fall of the control of South Hadley Falls, will cart around; charge, eighty cents. Bottled Falls, while art around; charge, fifty cents. Ebtield Falls, about ten miles below Springfield, can be run.

ENT Trade supplied by American News Company.

REMOVAL.-On or before May 1st the Forest STREAM will remove into its new offices in the Times building, Nos. 39 and 41 Park Row.

GAME AND FISH RESORTS .- We have been much gratified at the courtesy of numerous friends who have so kindly responded to our request for specific information of fishing and shooting grounds. The season when such information will be put to practical use is now rapidly approaching; and we again call attention to the scope and usefulness of our plan.

The office of the FOREST AND STREAM has long been recognized as the right place at which to apply for directions to the various sporting localities of the country. To make the information thus sought fresh, accurate and reliable we are compelled, in turn, to urge our correspondents and friends all over the land to give us the results of their personal experiences. By receiving such reports, filing them away here and there, transmitting them to others whom they may benefit, we are constantly rendering an invaluable service to the great body of sportsmen.

The managers of various railroads which may pass through good sporting country, the proprietors of summer hotels and residents in game districts will find it greatly to their own interests to transmit to us at an early date such particulars as are designated in our Game Bag and Gun columns.

The spring trout fishing opens in this State, in Pennsyl-Connecticut, Massachusetts, Virginia, Minnesota and California next Thursday, and at that time the army of anglers will go forth to the streams. Early reports for the Forest and Stream Directory will be duly appreciated by those who avail themselves of the same.

—Do not fail to inspect the display of trout at Mr. Blackford's stand in Fulton Market next Thursday. Next to going out to the trout streams, will be the pleasure of lingering over the beauties to be seen there. The American Fish Cultural Association is happy in the appointment of its annual meeting this year at such a time that the members may avail themselves of the pleasure of examining the rare collection.

-The party who have in charge the American exhibit for the Berlin Exhibition sailed last Saturday from Hoboken in the steamer Neckar. Too much credit cannot be given to Prof. Goode, upon whose shoulders in a great measure fell the task of collecting and arranging the proposed display, and to whose energetic labors the excellence of that display is largely due.

THE NEW YORK BENCH SHOW.

THE entries for the coming bench show of the Westminster Kennel Club are coming in much more rapidly than at the corresponding period of any other exhibition; and there is every promise that the number of animals and the general excellence of the various classes represented will surpass any previous show. The rapid advance in quality of the dogs now presented for competition at the exhibition of the Westminster Kennel Club is very marked. Many dogs, which in the earlier history of bench shows would have received awards or high mention, fall short of such honor because the standard of excellence has advanced. Certainly no agencies have contributed so appreciably to the breeding of fine stock in America as the bench shows in various parts of the country. They have had in their peculiar field the same good effects as those which have followed the annual cattle shows and other competitive exhibitions of live stock.

The Westminster Club has been largely influential in directing popular taste in canine matters. For instance, among pet dogs the much and justly-abused Spitz, once so common and fashionable, was ignored by the Club at its first show, and at subsequent shows. 'The consequence is that the Spitz has long since deservedly lost caste, and his place is filled by other breeds of pct dogs. We shall not now attempt to speak of the increase in the number of the various classes of pet dogs and sporting dogs now owned in New York, the direct result of former bench shows, for we have not the statistics before us; but this increase is both noticeable and highly encourage ing. Doubtless a similar effect has followed the exhibitions of Boston, Philadelphia, Baltimore and St. Louis.

In the selection of judges the committee have been very happy this year. Messrs. Hammond and Wise are well known to all interested, and the gentlemen from abroad need no commendation from us. Dr. Gordon Stables has made special study of the classes which he is appointed to judge, and as a judge at bench shows Mr. Hugh Dalziel has a well-earned reputation for honesty, straightforwardness and impartiality. Competition is keen in the judging ring nowadays; many owners press forward their favorites for the first prize; and the judging must be not only by experts, but by experts who are unprejudiced and impartial. We may at this early day premise that the assignment of the awards will give satisfaction, not to all-that will never be possible-but to the great majority of exhibitors and visitors.

THE NEW YORK STATE TOURNAMENT .- It is a foregone conclusion that the approaching Sportsmen's Convention. to be held at Seneca Falls under the direction of the Seneca Gun Club, will be a grand success. The prize list, although not yet completed, figures over \$2,000. A very generous response is being made by the citizens of Seneca Falls for the purpose of adding a citizens' purse, and the prospects are that the present prize list will far exceed any before offered at a State convention. Reports from the West contain favorable news for an early catch of birds, and there is little doubt of their being secured early. The location of the grounds has not yet been decided upon, but the committee have several in view, any one of which would be excellent. From all parts of the State comes news of new clubs organizing, with the intention of joining the association. There is every reason to hope for an early meeting, and with the renewed interest manifest among the Long Island sportsmen, and intentions expressed from members in Central and Western New York, there can be no reasonable doubt but that the 1880 convention will be the largest ever held.

Notes .- It is an excellent plan while in the woods to keep a diary, in which each night the incidents of the day may be jotted down more or less fully. The roughest and most incomplete memoranda are better than none at all. Memory is a very capricious faculty of the mind : it responds readily to suggestive notes or tangible me mentoes. By means of a few written notes it is possible to bring back almost a complete picture of the entire vacation trip, as pleasant in its recollection as in its actual experience. A worthless bit of bark, a feather, a fur tip, a flattened bullet, and the numberless little odds and ends of camp-life, preserved by chance and of no intrinsic value, may yet possess in their suggestiveness a worth which renders them more precious than trinkets of silver and gold. The trophies of the hunt, adorning study or dining-room, are naturally objects of pride as evidences of success in the field; but there is a much higher gratification in thinking over the thousand and one incidents and experiences connected with them and brought back to memory by them. If we can find sermons in stones, and books in the running brooks, a cabinet of the nicknacks of camp life contains material for whole volumes of reminiscences.

We had a most pleasant call last week from "Penobscot," whose frequent contributions to this journal have done so much to interest and instruct their readers. Mr. Libby returns from a four years' residence in Nevada to his home in Maine. Next fall he proposes to make an

extended trip through the Maine woods, and we are promised an account of the trip, "Penobscot" knows the Maine country as well as any man living, and what he may write will be sure to be intelligent and authentic.

Mr. Charles G. Jewett, of Howell, Mich., is one of the exponents of the therapeutic value of field sports, and has proved the efficacy of the rod and gun to change an invalid into a robust, strong man. Mr. Jewett is by no means the only one of our acquaintances, who has found in the health-giving properties of exercise, sunshine and pure air the great remedial agencies provided by nature. We can mention men in almost every profession and walk of life who have found health and strength only in the exhilarating rough and tumble of out-of-door occupation. Our correspondence brings us into communication with scores of men of similar experiences. Were there no other good attending participation in the sports peculiar to the forest and stream, this single fact would afford sufficient grounds to encourage and foster such partici-

We need make no apology for reproducing in our columns to-day the bit of native American literature, which our correspondent has embodied in his paper on the Attractions of Arkansas;" for certainly no sketch of that State would be complete without at least a passing reference to the famous dialogue between the Traveler and the Squatter. The story is an old one; but it is for this very reason all the more interesting, because it pictures a curious phase of social life in the Southwest, which has now almost completely passed away. To be appreciated, the story should be listened to as doled out by a self-taught musician of the backwoods, to whom the peculiar idioms are not altogether novel. It was our good fortune once, on a bright moonlight night, down in Eastern Tennesee, to hear it thus rendered from a vagrant Troubadour from the Florida piny woods, who interpreted the spirit of the original with a disregard of musical harmony and a mutilation of the English language, which we candidly believe was never before approached by mortal man. Or, better still, "Yell" tells us that we should hear it played by an Arkansas fiddler, in a log-cabin, and see it danced to by some Arkansas young folks, on a "puncheon" floor. The dexterity of young folks, on a "puncheon" floor. the dancers in getting over and around the inequalities of this style of floor, without missing a step or breaking the continuity, so to speak, is an inexhaustable source of delight to the spectator, and well worth a day's journey to witness.

PRESIDENT ADAMS ON DOGS.

T affords us no little satisfaction to be able to present I to our readers this week a letter from the late ex-President, John Quincy Adams, "the old man eloquent," narrating some peculiarly interesting, though not unparalleled, instances of the sagacity and memory of the dog. The letter, which has, outside of its attractions to lovers of the dog, an historical interest that will command for it the attention of every one, has never before been published. It was written to Dr. Parkman, of Boston, whose murder by Professor Webster, of Harvard, will be re-membered by some of our older readers; when that gentleman was assisting his friend Mr. Audubon in collecting material for the latter's superb work on the Viviparous Quadrupeds of North America.

We owe the opportunity of reproducing this interesting document to the courtesy of a member of the great naturalist's family, in whose possession it now is. her we desire most cordially to acknowledge our obligations and those of our readers.

The letter is as follows:— WASHINGTON, 28th March, 1835.

Dr. George Parkman, Boston.

DEAR SIR:-I have received with much pleasure your kind let-DEAR CHR.—I nate of televier an induction product of the distribution of the area of the distribution. There are two incidents which I have witnessed indicating instituct, memory and association of ideas in dogs, which made impression upon my mind, and to one of which

oogs, which make impression upon my inmit, and to one of which your letter no doubt refers; my own memory fails me so much that I have no recollection of having mentioned it to you, as I certainly did from the reference which you made to mo of it. Reciding at Berlin, during the closing years of the last century, the British Minister of that Court, the Barl of Eight, had a pair of dogs of the terrier breed with the remarkable peculiarity that ongs or the terrier break with nobel remains on feedings of the terrier break with their color was white, though generally with two or three choco-late-colored spots on some part of the body. In a litter of pup-pies bred between thom, in 1789, there was one female milk white, without a single spot, purchased of one of the servants of Lord Eigha, who was then in England, for me by an American named have perhaps known in later times as keeper of the house at Concert Hall.

cert Hall.

I gave to my dog the name of Blanche, and educated her myself. Her principal good quality was that common to all the terrior breed, being an admirable rat-catcher, and in that capacity often useful. But as she grow up she had acquired the babit of a lap-log, and whenever she had the opportunity would jump up into my lap and there coil herself up and go to sleep. If I were sitting at a table writing or reading, so that she could not get into my lap she would come and lie down between my feet and

into my lap, she would come and me down between my teet and go to sleep in the same manner.

I indulged her very much in both these babits, considering them as marks of the affectionate nature of the animal, and finding the latter often comfortable to myself by keeping my feet warm, particularly when traveling in a carriage in cold weather.

In 1801 I returned from Berlin to the United States and resumed my residence in Boston. I brought my dog with me. Whitcomb.

who had gone with me from the United States, and lived with me seven years in Europe, came back with me; but as I had here no occasion for a steward, he left me and opened a public house in Boston. He was for several years the keeper of Concert Hall.

Boston. He was elected a member of the Senate of the United States, and on that occasion broke up my household establishment at Boston. Blanche was then four years old. I could not conveniently take her with me to Washington, and gave her with the whole when the work who then kept public house in another part of the

town.
Three years later, in the summer of 1806, baving occasion to pass
some weeks in Boston, my wife and family being at Washington,
I took lodgings at Concert Hall, then kept by Whilcomb. On the first day that I dined at the common table, where there were perfirst day that I dined at the common table, where there were perhaps thirty persons. I felt while at dinner, a dog lying down between my feet, which were under the table. It was my pool Blanche, whom I had not to my recollection seen for nearly three years, and whom, I am almost ashamed to say, I had forgottally while she had so faithfully remembered me. On my pushing back my chair she jumped into my lap with all the lively caressos and marks of a fattachment and delight usual to her kind and care the care to the control of t feet of any other person but me.

This is the circumstance which I must have mentioned to you: Into the circumstance wind in this is an electrical of the most it was when it happened, perhaps, more particularly noticed by me, because it confirmed an idea of the power of memory and the force of habit in the natural history of the dog, which I had formed in very early life, and of which I must also tell you the

the rear 1780 I went with my father from Paris to Halland. In the year 17801 went with my tather from Paris to Holland, and in passing through the city of Delft visited the church containing the magnificent monument in honor of William the First, Prince of Orange, the Washington of his age and country. He Fince of Orange, no wassington of his age and country. He fell, you know, by the hand of an assassian at Delft, and lies buried under that menument. A figure of him in bronze is exhibited extended on the tablet of the monument, with that of a dog lying at his feet. The reason for which, we were told, was to perpetuate the memory of the fact that his dog actually followed him. to his grave, and refusing to leave it or to take any sustenance, there remained and aled on the spot. Modern this fact is strictly historical or whether a little aided with the embroidery of imagination, I do not inquire; but the sight of the monument with this explaintory comment, you may suppose, was not likely to be soon forgotten by a boy of thirteen. Two or three days after this incident I met at Leyden, another city not far distant from Delft. incident I met at Loyden, snother city not far distant from Delti, and English gentleman, a traveler, who had also visited the monument of William the First, and it gave rise to a conversation in which that gentleman stated that he himself had been the owner of a dog to which he had been strongly attached, and which was also much attached to bim; that he had given this dog to an intimate friend of his departing for India; that seven years after he went himself to Calcutta and there met with a reception equally cordial from his old ritend and from his dog; that the dog instantly recognized his old master, slow to him, and for some time stantly recognized his old master, slow to him, and for some time could scarcely be separated from him, though quite happy and equally attached to the master to whom he had been given.
All these anneedotes are but evidence that the nature of the dog is the same as it was in the days of Homer and of Ulysses—in the

days of Argus-Argus— Who knew his lord; who knew and strove to meet,

But strove in vain to crawl and kiss his feet; Yet (all he could) his tail, his ears, his eyes, Salute his master to his soul's surpriso. The dog whom fate had granted to behold His lord, when twenty tedious years had rolled,

His lord, when evenly tenous years had follow.
Takes a last look, and having seen him, dies—
So cloc'd forever faithful Argus' eyes.
The second incident, to which I have now alluded, and which I think I never mentioned to you before, relates to a dog of the same breed as my Blanche, but of a prior generation, and which

red to Whitcomb himself.

belonged to Whitcomb bimself.

In the summer of 1800 I traveled with my family from Berlin
by the way of Frankfort upon the Oder into Silesia, and returned
in the autumn by the way of Dresden and Leipzig. At this latter
city we balted and spent there three or four weeks. Whitcomb od his dog Pincher were with us through the whole tour. one ms oog rinener were with us infougatine whole four. When we left Ledjug and returned to Berlin, Pincher was accidentally left behind, an event which was not discovered until we were some miles advanced on our way, and he was given over for lost. About ten days after we reached Berlin Pincher made his appear-About tell days intervolves and some services and overed with snow and with limbs stiffened so that he could scarcely move, from which, however, he soon recovered to his usual move, from which strength and vivaci

strength and vivacity.

The distance from Leipzig to Berlin was about one hundred miles. How Pincher had found his way home we never knew. The road by which we had gone from Berlin was in the opposite direction, and he had never traveled the direct road from Leipzig to Berlin. This occurrence, therefore, indicated a faculty in the dog more comprehensive than that of memory, perhaps an exquisiteness of scent, of which I can yet scarcely form a conception.

Whether these facts will be deemed by you or by Mr. Audubon Whether these tacts will be deemed by you or by Mr. Audubon of sufficient interest to be noticed in his memoir upon the intuition and intelligence of dogs, I leave to your and his better judgment. They are a his and your service. I pray you to remember me kindly to him, and also respectfully to Mrs. Parkman. I hope to have the pleasure of seeing you in the course of a few weeks, and in the meantime remain your ever faithful friend and servant,

JOHN QUINCY ADAMS.

A CENTURY BENEATH THE WAVES.

WE have recently had the pleasure of examining, through the courtesy of Mr. Chas. Hallock, a cane and a pen-holder made from the oak of an old French frigate which was sunk off Quebec in the year 1756, and which was only last summer raised from her muddy bed and towed to shore. These articles were sent to Mr. Hallock by Mr. J. W. Dutton, who, as our readers may remember, was the constructing engineer of the celebrated Dufferin Terrace, which clings to the heights of Cape Diamond at Quebec, an account of which apreared some time since in the columns of FOREST AND STREAM. To the kindness of Mr. Dutton we owe the following interesting historical sketch of this old vessel, based on the old records of the French Government in the possession of the Seminary at Quebec. Mr. Dutton 32V8 :-

Quebec, as you will doubtless remember, was taken

from the French by the English under Wolfe on the 13th of September, 1759. It was upon this day that the decisive battle was fought that terminated in the defeat of

from the French by the English under Wolfe on the 13th of September, 1759. It was upon this day that the decisive battle was fought that terminated in the death of the French under Montcalm, and also in the death of Wolfe on the plains of Abraham. For two or three years before this time there had been rumors of war about Quebec, brought from France by the merchantmen and traders who came across.

The city, and in fact all the country about—even into the States of Ohio, Michigan, New York, etc.—was under the Franch, who had forts and outposts all over it. Of the inhabitants the Marquis de Montcalm was the head, or in fact the Governor. Upon the rumors of war coming to him, all the works about Quebec were very much strengthened and in many cases doubled. New carthworks were thrown up and new vessels built in the Lower Town to help repel an attack by river. Among these last there was one that was known by the name L'Original. She was built just below the Citadel, scarcely a quarter of a mile from where Montgomery fell mineten years later. For those days she was a large vessel, but in this age a thousand-ton vessel is not much to tell of. She was built of oak timber, which must have been brought from France, as none of the Western oak forests had then been cut into, it being impossible then to bring the timber down. The vessel was built of the best fimber and iron, but she was fated never to do much execution for her country, as shortly after being launched she was sunk just opposite where she was built.

There she lay until last summer, when she was raised and towed to shore. She sank in September, 1756, so that she had lain under the waters of the St. Lawrence about one hundred and twenty-three years. In spite of her long immersion, when they first attempted to raise her, it was found impossible on account of her being sunk in the mud, and it was equally impossible to tear her to pieces as the oak was as solid as on the day she went down. The only thing that was gone was the iron, in those places where it had bee

there were found to be over a uninted absolute sizes and many hundred fathoms of chain entangled with her. These were of course raised, and in some instances claimed, but most of them were sold by the Government to satisfy expense

GAME PROTECTION.

BLACKBIRDS FOR CENTRAL PARK.

EVERETT HOUSE, NEW YORK, March 9th.

Editor Forest and Stream:—
I inclose you five dollars to form the nucleus of a sum of sixty

dollars required for the importation of five pairs of blackbirds, to be turned loose in Central Park.

to be turned loose in Central Fark.

The blackbird is hardy and local in its batits; it does not migrate. I have turned it out at Quebec, where it lived till the end of January, when the last of the colony was caged and sold; this bird, a male, was quite fat and very strong in both feather and wing at that season of the year. I have noticed in Canada the

wing at that season of the year. I have noticed in Canada the blackbird supt both earlier and later than the American robin, and as it is an "all-the-year-round bird," and comes to food, it is well suited for Central Park.

Messrs. G. H. Holden, of 387 Sixth avenue, will undertake to furnish allycand in good order flvo pairs of blackbirds (cocks and heast for the above sum (\$50), providing they get the order many factors.

to best part of Central Park to try this experiment is when the peacocks and guinea fowl are fed.

We have all our fanoies and our manias. Mine was, twenty-five vears ago, to kill European jusects in America with their natural years ago, to kill European insects in America with their natural enemiels, European birds; consequently I imported sparrows. Now I advocate that boys should be allowed and encouraged to commence their sporting career by putting salt on a sparrow's tail, or circumventing Mr. Sparrow by any other device, such as brick trap, horse-bair noose or dust shot. From sparrow shoot. ing they will go on to blackbirds, and so on to game W. RHODES, of Canada,

We hope that Col. Rhodes' generous offer may be met with a prompt and liberal response from the citizens of New York, who are to be directly benefitted by the success of the undertaking proposed above. If a disinterested stranger, coming to our city, sees the possibility of adding to the value and enhancing the pleasure of our beautiful Park, and is willing to put his hand into his own pocket and so to give a substantial impetus to the accomplishment of the plan, certainly we should not hesitate to join heartily in the work. The blackbird is a sweet singer; his notes are heard before those of the robin in the early morning, and after those of the robin in the evening-the two periods of the day when a bird's song is the sweetest. Col. Rhodes successfully introduced-the blackbird upon his own grounds at Quebec, and we can conceive of no possible reason why the experiment, if made now and here, should not be attended with like success. We shall be ready at once to receive subscriptions for this purpose, and hope next week to have the pleasure of giving credit in these columns for the whole sum required. The spring will be so far advanced before the order can possibly reach England that immediate action is urgent.

We have received \$5 from Col. Rhodes, and have added thereto \$5 ourselves, leaving \$50 still to be contrib-

WHAT IS THE REMEDY !- Niantic, Conn., March 17th.-

of the State. Birds were shot and trapped long before the season opened legally, and also after it closed. Now that trout fishing is about to commence, these wretched that trout fishing is about to commence, these wretched so-called sportsemen will sneak along the brooks, ashamed of their actions and afraid to be seen, and go to all this trouble and humiliation. Yet these men claim to be gentlemen and law-abiding citizens. I shall keep a close watch this year for these arristocratic poachers—perhaps some of the New London boys will assist me. If one or two can be shown up, perhaps a square fisherman can have some sport. What do you think of a fellow netting black bass? I am told by responsible parties that it was done. Is there any cure for such doings? Scales.

Try publishing their names in the Forest and Stream.

Try publishing their names in the Forest and Stream.

Bellefonte Sportsman's Association. — Bellefonte, Pai, March 8th.—A meeting of the sportsmen of this place was held Monday evening March 8th to form an association for the protection and propagation of game and fish. Officers were elected as follows: President, George Vallentine; Vice-President, H. S. Hale; Treasurer, Theodore Drescher; Secretary, J. D. Geissinger. Board of Directors: S. T. Shugart, Thos. Burnside, S. F. Foster, J. P. Hughs, F. P. Green.

As above stated, this club has for its object the protection and propagation of game and fish, and the enforcement of the laws and ordinances against the illegal killing of the same, the advancement of good fellowship and mutual improvement among sportsmen. This community has long felt the want of an organization of this kind, as our streams and woods are almost depopulated of fish and game, owing to the war of extermination carried on by hunters and fishermen to the utter disregard of all law and common sense. This association has just been started, and any suggestions or anything that will help our organization will be thankfully received by this society.

J. D. Geissinger, Secretary. water or other

-A bill has been introduced into the General Assembly to prohibit the catching of brook trout or salmon, except by angling, making the close season from Sept. 30th to April 1st, and providing against trespass for the 30th to April 1st, ar purpose of fishing. -

NEW MONTANA CLUBS .- Helena, March 12th .-New Montana Clubs.—Helend. Metroh 12th.—Montana is falling intoline. Two more red and gun clubs duly organized—one in Deer Lodge County and one in Missoula County. Protection of game is the order of the day. B. F. Cope, of West Gallatin, recently shot an elik, and was fined \$30 and costs (about \$80 in all), according to the provisions of the game law. I do hope Congress will pass a law to protect our buffalo and other large game, now being slaughtered by wholesale. It is reported that one man on our border killed 2,000 buffalo this winter for their hides only. At that rate how long can it last? Montana

Game Bag and Gun.

GAME IN SEASON IN MARCH. Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quall, Snipe, Ducks, and Wild Fowl,
"Bay birds "generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avo-cets, etc., coming under the group. Linacolae or Shore Birds.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and tis Season; Fish and its Sea-son; Boats, Guides, etc.; Name of person to address.

COOT SHOOTING ON LONG ISLAND SOUND.

AKING it for granted that many of your readers have never enjoyed the above sport, perhaps a few as descriptive and to the point may not prove uninter-

have never enjoyed the above sport, perhaps a few lines descriptive and to the point may not prove uninteresting.

Of all duck shooting, either inland or on the seacoast, coot shooting is perhaps the most difficult and hazardons. In the first place one has to shoot from a boat invariably, although I have killed them from a lind on the South Bay over decoys; but, generally speaking, they can only be killed "in the right fashion," over deep water. At least fifteen men ought to constitute the party (the more the merrier), and they ought to be equipped with suitable duck-boats, not the huge row-boats one sees so often, and enough actually to frighten the sillest coot that over flow, but good, strong, low duck-boats, decked clean to the cockpit, and able to ride a heavy sea. Thus provided, and with at least 150 feet of strong light rope and a neat lead weight for an anchor, the gumer need never despair of not keeping his place in line. Often and often have I seen a glorious day's sport utterly ruined by not regarding these simple rules—a good boat and plenty of anchor line. Verbum sap.

Supposing, therefore, that our party of noble "cootists" have reached the waters where they intend to form their line, they proceed to draw lots for positions. Sometimes this is done before they leave the shore, but the arrival of one or more outsiders necessitates going over the lottery business again. (I would mention here that the center of the line is considered the best generally.) The line is formed off some convenient island or point of rocks, and the boats are stationed about fifty or sixty yards a part; any nearer together is positively dangerous. In fact, I never hesitate to keep a good clear space of water between my neighbor and myself, especially if I notice that he is green at the work; he might got excited when the birds were flying about him; and a charge of No. 3 shot at fifty yards 1 do not fancy personally, do the proceed house the birds were flying about him; and a charge of No. 3 shot at fifty yards 1 do not fanc

Well, our line is at last formed. I can just make out Wen, our me is at less formed. I can just make out the nearest boats in the gloom, as their occupants are busy arranging themselves comfortably before the day breaks. We ride gently on the long swells, it almost puts us to sleep, the gentle, lazy motion, when "Boom! Boom! Goes a heavy gun to the southward. In an instant every man is watching keenly for the birds. A the nearest boats

light rosy tint in the east proclaims the approach of day, and we watch the mists rolling away over the waters. "Mark e-a-s-t-" echoes along the line. A pair of "old white wings" are coming swittly along to their feeding grounds, when suddenly catching sight of the boats, they endeaver to cross higher up in the air. A sharp report, and one whirls over into the water. The other, swiftly turning at the sound, skims down the line and falls a victim, as he tries to cross. "Mark east!" again rings out. This time a large flock is seen. In a moment, several splash into the water under our fire; while the rest, utterly panie-stricken, cross and recross the fatal line. The fun has commenced in earnest. Almost constantly a rattling volley is kept up along the whole stretch of boats. The birds are flying thick and fast, and you soon tire of yelling "Mark! Mark!" Sometimes the birds seen possessed to cross in the same place; consequently the lucky man, who happens to be stationed there has the cream of the shooting. Often the birds are wild and will turn deliberately around when approaching, especially so when they have been shot at a good deal during the season. Occasionally a pair of old loons will come swinging along to vary the monotony, but one has to have a choke-bore of the first quality to stop those fellows. I have always considered them ironound and double-rivetted, and will never think otherwise.

Broadbill and old-wives sometimes cross the line, but Broadbill and old-wives sometimes cross the line, but the former are too shy generally. The shooting does not last long as a rule—say from sunrise until 9 o'clock, when it is over until 4 P.M. From that time until dark very good shooting may be had, but the morning's work is adways the best. I am speaking now of Long Island Sound especially. In other localities the time to kill them Sound especially. In other localities the time to kill them best may of course be different. It is famous sport for those that love duck shooting indeed, as it requires a deal of cool judgment and the right kind of nerves to stop those white wings as they cleave the frosty air. Take my advice, those who desire a day on the "line," Use a choke-bore of not less than nine pounds weight, and with plenty of good powder and chilled shot you will not regret your venture,

BLUE BILL.

BEACH SHOOTING ON JESSUP'S NECK

THE day was beginning to dawn on the 22d of last October as the Long Island Forester Club, represented by five as ardent sportsmen as ever drew bead on a duck, landed at Sag Harbor, a village which might be compared in sonnolence with the one rendered more celebrated by the pen of Washington Irving. It has been the custom of the L. I. F. C. to make an annual excursion to these bursting required so, the first production of the last of the contraction of the L. I. F. C. to make an annual excursion to these bursting required so, the first production of the last of th

the custom of the L. I. F. C. to make an annual excursion to these hunting grounds about this time for the last four or five years, and wore not surprised to see a wagon awaiting us, and into which guns, baggage and annuntition were piled sufficient to stock an arsenal. A four-mile drive through eader woods brought us at last to one of the prettiest and most sequestered hamlets on Long Island, named from an Indian tribe which once dwelt here, Noyac or Noeg (though it is believed that the former is the true orthography, and it is now known by the former name). It lies nestled close by a forest which extends seven miles back to Bridgehampton, fronting Noyac Bay, and commands a beautiful view of Long Island Sound, Peconic Bay and the sandy hills of Shelter Island.

Island Sound, Peconic Bay and the sandy hills of Shelter Island.

After breakfast we strolled around the vicinity, visiting the former friends of the club. The time passed bleasantly, listening to their homely gossip or some thrilling sea yarn spun by an old whalenan.

When we awoke early the following morning the moon, which had been shining brightly early in the evening, had gone down, leaving the place shrouded in inky darkness, and the wind howling around the house with almost whiter fierceness caused many wistful glances to be cast at the warm beds we had just left.

But the expectations of a great bag which we hoped to get made us shake off these feelings, and we descended to partake of hot coffee and rolls, after which, shouldering our guns, we stumbled out on the dark road en route for our destination—Jessup's Neck.

A twenty minutes' walk brought us to the neck. This singular formation of land consists of a low sandy peninsula, one hundred feet in width, extending out into the sound about a mile and terminating in a promontory perhaps eighty feet in height, and separating Peconic Bay from Noyac Bay. Hastily collecting dried sea grass we make a circular blind about one hundred yards apart, high enough to screen us from the keen eyes of the ducks, and Jlying inside these cramped quarters we patiently await the breaking of day.

we make a circular blind about one hundred yards apart, high enough to screen us from the keen eyes of the ducks, and lying inside these cramped quarters we patiently await the breaking of day.

The distant gull in this early light, in his search for food, appears to be magnified to the size of an eagle. Soon the sun appears creeping above the horizon, and reflecting on water and clouds the most brilliant and beautiful colors I have ever seen. A glance along the entire beach reveals nothing but heaps of sea grass, whose tops rustle in the keen blasts which sweep over them. Suddenly a cry is faintly brought to our ears of "Down east'ard" and peeping just over my blind in that direction I can perceive up against the sky a bunch of ducks. They are rapidly nearing us, and we auxiously, breathlessly, watch their course, hoping they will cross over one of our blinds. They veer northwesterly and cross over Lon Edwards' stand (one of the L. I. F. C.'s best shots) at lighting speed, their wings going so fast they resemble the spokes of a wheel in rapid motion. A pull of smoke issues up from the blind, and a duck, suddenly arrested in its tremendous velocity of flight, leaves the flock and falls heavily to the ground. It proves to be a coot, of the swiftest of ducks, whose flight is computed to be from sixty to ninety miles an hour.

Now a flock of sheldrakes appear in front, going across the beach. They pass in front of my cover; the gun follows their line of flight, a moment and is discharged, but

Now a flock of sheldrakes appear in frone, going across the beach. They pass in front of my cover; the gun fol-lows their line of flight a moment and is discharged, but still they keep on their course for two or three hundred yards, and I am chagrined to think I missed what seemed so fair a shot; but suddenly one flutters his wings in a desperate effort to keep up with the rest, but in vain, and then a sullen plunge follows as the water of the bay closes

over it.

A great many wounded ducks are lost here in this manner. Sometimes at the turn of the tide they drift ashore and are picked up next day; but more frequently they either sink, and in their death struggles grasp hold of some marine plants and never come to the surface, or

else are carried out into the sound. One of the most difficult things in duck shooting to a novice is to be able to judge when a duck is within killing distance; also considerable address is required so to aim as to give them the coup de grace before they could pass over this narrow strip of land, and requires one who is truly a dead shot.

But to return to our mutton—the ducks. The fusilade is now general from the end of the beach to the mainland. Occasionally a flock will fly along abreast the entire peninsula receiving a whole tradaside of shot, and then pass on leaving their number somewhat decimated. Toward II o'clock the flights slacken, and by 12 the sport is over for that day fly the sport is over for that day the sport is over for that day the sport is over for that day the sport is over for the flights shoot twelve coots, six broadbills and five whistlers—a small bag comparatively, but well earned by long and difficult shots.

HARRY HONTER.

MY FIRST SHOOTING ON AU SABLE FLATS.

MY FIRST SHOOTING ON AU SABLE FLATS.

It was in the year 1865, before the Canada company had any thoughts of draining the marsh country near the bend of the Au Sable River, that myself and Jack R. proposed going to the marshes for a few days for ducks, which then were to be found in countless numbers in that section. There were not many shooters who were familiar with this ground then, so that we had some fine sport over a ground that was almost a preserve. The Au Sable, I may say, is not the stream of that name known to most of my sporting brethren in the State of Michigan, but one that rises somewhere in the interior of the western peninsula of Ontario, and flows into Lake Huron near a small village known as Port Franks. Before reaching the lake the river winds in a torthous course to almost every point of the compass, and one of these bends, encircling many hundreds of acres of marsh, is known to all sportsmen who go there as the Devil's Elbow. In the bend of the elbow there were in olden times two lakes known as lakes George and Burwell, of considerable area, shallow, and partially grown up with rice and other water plants, making one of the best duck grounds for its size in Canada. The lakes were from one to five miles wide and about seven miles in length, with an average depth of say six feet. Some distance below the bend of the river some obstruction existed, which caused the river to overflow what little banks it had, and flood thousands of acres of the adjacent flat land to a depth of about three feet; this, like the lakes, was grown up with water plants, and in stormy weather was a secure haven for ducks that had been driven in off Eake Huron and the other two lakes by heavy seas and winds. For many years not more than a dozen sportsmen visited this El Dorado in a season: thus, as I said before, it was almost a preserve. So much for our ground. for our ground.
We started from Stratford, and took with us all our pro-

We started from Stratford, and took with us all our provisions, blankets, etc., sufficient for a trip of ten days, although we found out afterward that we did not require them, as we got lodgings at the house of a French-Canadian by the name of Varey, about two miles from the shooting-ground. This man was one of those who had settled in that place, and contrived to eke out a miserable existence by shooting ducks, fishing, trapping and taking in sportsmen who came there in the fall for sport—not, reader, "taking them in," as that term is generally understood, for he was one of the fairest men in his charges I ever saw.

My armament consisted of a single-barrel gun, somewhat noted about Stratford, and a double gun borrowed from Joe Turner, of happy memory, and a good weapon it was. Jack carried one double gun of large bore and heavy metal. Our stock of annunition night have served a company of regulars for a week in war time, so extensive was it, and it is needless to remark that most of it came home again.

it came home again.

served a company of regulars for a week in war time, so extensive was it, and it is needless to remark that most of it came home again.

We arrived at our ground in the evening, after a drive of sixteen miles over a rough road from the railroad station, and after a good supper got things in order for a terrific onslaught on ducks next morning. During the night Jack was troubled in his sleep over ducks hard to hit or too heavy to carry, while no twenty men in the country ever shot so many ducks in a whole trip as I did in this the first night of my first duck shooting exension. We were up long before daylight, and while breakfast was fixing employed ourselves giving our boots one more coat of waterproof and arranging sundry other little details. These and the good breakfast being disposed of, we started for the marsi in a small skiff belonging to Varcy, taking turns at pulling to keep warm. Arrived there, it did not take long to run the boat into the cover of the rushes, and very soon the fun began. With daylight the ducks flew, and up to that time I had never seen so many in my life. What wonder, then, that fever (whether "buck" or "duck" I know not) took me, but the flight was passed for that day before my nerves got cooled down enough for me to shoot with any success. However, I soon made up for lost time, and during the remainder of our stay, gave a good account of myself.

We were five days on the ground; but after the second, the weather got so fine that the ducks only came in to feed at night, and went out in the lakes, where it was impossible to get them in the duytime. After waiting three days more in hopes of a change, but none appearing, we packed up, sent a boy for our team and returned once more to civilized life, after five days of rest and two of good sport. Our bag, when divided, gave us forty-five, nearly all mallards, so our time was not lost. The expense of the trip only amounted to §15.

Thus it was not ruinous and well repaid itself, and I may say, although I have been duck-shooting many tim

ADIRONDACK DEER HUNTING.—Moira. N. Y., Merch 16th.—I think the deer the coming season will be plenty in the Adirondacks, for there has not been snow enough during the winter for crusting or killing them in yards, as is generally done in winter when the snows are deep. They also will come out in good order, the weather has been so mild, and they could get at their food easily. I have not heard of any being killed during the past winter which is the first one that I have not for many years.

ADRION ONNACK.

Naw. Leasy.—Deem County March 314.—Shooling.

NEW JERSEY—Ocean County, March 31st.—Shooting has been poor. Ducks are plenty, but hard to get at, as they will not stool. The flight has already commenced, and thousands are arriving and leaving daily. Wilson's snipe are here, but are very scattering. I have seen and shot a few this week, but the strong easterly winds nearly all the month have kept the tide so high that walking on the meadows is very difficult. We shall have plenty of good sport the first warm days that come.

S. K., Jr.

PENNSYLVANIA— Applebachsville, March 22d.—1 and Mr. Townsend of Philadelphia were down around Tinicum Island the 8th of this month. We not with poor success, It was stornly nearly all the time, and the ducks were very wild. All we shot were over stool-ducks. Snipe do not seen to come very blick, I was down in the Big Meadows last Saturday and started two snipe. I think it is most too early for them, but I hope in a week or two they will be plenty. There is any quantity of qualis and rabbits left from the winter. I hope by next fall we will meet with good success. Pheasums are very scarce.

scarce.

States are very scarce.

VIRGINIA NOTES.—Bedford County, Va., March 12th.—This is a dead time of year in these parts as regards sporting matters, unless one can dignify the annual flights of robins by classing their migrations under that head. For want of more interesting matter we may state that these birds have arrived in unusually large numbers this spring, and the heart of the single barreled schoolboy has waxed extra joyful at their abundance, and the danger to those people whose avocations lead them in the neighborhood of grass lots around towns and other such localities dear to robins and their youthful pursuers is proportionately increased. The winter in the mountains has been specially favorable to the young trout, and we may hope when the season opens—April 1st—to have better luck than last year.

been specially favorable to the young unou, along when the season opens—April 1st—to have better luck than last year.

I hear that black bass are being caught in great quantities lower down the Staunton (Roanoke) than ever before known. I visited Captain McMurdo's kennels last week and found that gentleman busy at work upon some very fine young dogs, representatives of the canine aristocracy of diverse sections of the Union.

The whistle of the steam-engine is at last to awaken the echoes of the James River Valley, that hitherto have responded only to the music of the boutmen's horns, and the splendid bass fishing at the head of the river will in the course of a year or two be more easily reached than now.

the course of a year or two be more easily reached than now.

RINGWOOD.

DUCK AND GOOSE SHOOTING AT GOOD GROUND, L. I.

—Providence, R. I., March 19th.—Myself and companion, Mr. P., of Providence, arrived at Lanes, Good Ground, L. I., on the evening of Match 15th. Found Mr. I. and Mr. S., of New York, and Mr. P., of Hartford, all fine sportsmen, waiting for a flight of geese. Wednesday dawned cold, cloudy and windy, and as Lane said, "a poor prospect for geese." Messrs. D. and S. started early for ducks, and the rest of us, four in number, took to the boxes for geese. After the stools were well set out and the boxes empited of water and sand, the party helped themselves to boxes and waited for the game. They soon hove in sight (a bunch of eight), and settled among the stools. We secured only three of that bunch, owing party to a missfire from Mr. P.'s gun and the poor shooting of your correspondent. We waited a long time before another bunch came in sight, and when they did come, they were very shy and sextled a long way off; and after half an hour of skillful work of the boat, with Si, at the helm, Lane thought it best to "give it to 'em," although a long way off. Eight shots rowarded us with seven as fine geese as ever fed in the bay, and soon after a black duck fell to Mr. P's gun, of Providence, at a very long shot, and that was the extent of the bag for the day.

We were nearly chilled to the bone, and returned to the house through a severe snow squall. The luck, since then, I know not of.

NEBRASKA DUCK SHOOTING.—Onatha, March 16th.—A restra consisting of General Crook Majur Fenex. I.S.

I know not of.

NEBRASKA DUCK SHOOTING.—Omahu, March 18th.—A party consisting of General Crook, Major Feney, J. S. Collins and J. W. Petty left to-day at 8 A.M. for a hunt about four-teen miles north of Ornaha. They returned at 8 o'clock P.M. with the following bag, 476 ducks, red-heads mostly; I Canada goose and I trumpeter swan, The same party last spring, on the Platte River, thirty miles west of Omaha, bagged 133 goose, 19 ducks and 3 sandhill cranes. General Crook and J. S. Collins on last Friday, the 12th, killed and bagged 125 ducks in about two hours' shooting at the first-hamed place.

If any of the sportsmen want some good sport this is the best place to come to. The fall shooting is much better than the spring. Parties wishing information will be favored with any reply by addressing Collins & Petty, Omaha.

The St. Mary's and Oreeffeenore.—Your reent notices of the St. Mary's River and the Okeefeenoke, as "happy hunting grounds," have turned the attention of sportsmen already in that direction, and their experiences, no doubt, will bring many more next year, when the folks of Chesser's Island will be better prepared than we found them hast week. Our party consisted of two Harvard men, one Long Islander, and/your correspondent. As one of the party proposes a contribution on the subject, I will not steal his thunder, but cannot refrain from expressing our entire satisfaction at the trip up and down the St. Mary's River, which far exceeded our combined expectations, and we had all had party large "river experiences," from Canada to the tropics. The St. Mary's offers a perfect 'battue' for alligator-shooting, Our rifles and shot-guns were in constant requisition; we did not keep count on the up-trip, but on the down, fifteen fell to our fire. The Captain and Engineer of the Flora are both first-class shofts, and no doubt have first-take practice on this beautiful river. Already the banks were ablaze with all kinds of flowering

shrubs, conspicuous among which were the azalea and graceful yallow jasmine, while magnificent magnolias and fragrant bay gave promise of a glorious bouquet in a few weeks. We rested at the excellent hotel at St. Mary's, kept by Mr. Thompson, of the Kearsarge House, New Hampshire, which we cheerfully recommend as one of the best, cosiest and most reasonable hotels in the South. And the week following our return, had the gratification of meeting your old friend—and excellent sportsman—Mr. E. S. Kenney, of New York, who had just returned from a trip up the river, delighted with the excursion, and jubilant over a splendid shot he had made from the deck of the steamer, which resulted in the death of a noble deer. On the return trip, alligator-shooting, shark-catching and porpoise-hunting, to say nothing of drum and snapper-fishing, are the order of the day here now, in magnificent sunshine, while we read of snow and slush north of Virginia. Why will not thousands of our people combine business with pleasure in this singularly favored region, where there is room and (as we have everywhere found) a welcome for all.

Mississippi—Vicksburg, Feb. 28th.—My brother and I

Mississippi—Vicksburg, Feb. 28th.—My brother and I went over the lake in front of the city this morning to bid the ducks good-by and found they had already performed that ceremony and left. They have not been abundant this season. Last year they furnished good sport till the middle of April. The supe are just coming in, but are quite wild. The season for quail closes March 15th, and so with most other game. So you see our days for hunting are now few. Fishing quite poor. There has been no high water for three or four years, and the supply in the lakes has been exhausted. Weather externely warm.

Miscarying Charge Palenting Trans. Ment. 15th.

supply in the intes has been exhausted. Weather externelly warm.

Mighating Gerse.—Pulcatine, Texas, March 18th.—Large flocks of wild goese are flying over us nightly, bound North. Some are reported as having stopped near the bottom of the Trinity River, distant about eighteen miles south of this point. None have been secured to my knowledge. One flock, or a portion of a flock, were flying around in a bewildered way one night this week, as though they were at loss for their proper direction. As the night was extremely dark and rainy, might they not have become bewildered? Numerous hunting parties are making the Trinity River their objective point for wild turkeys. They are reported very plenty this spring, although it is a little early for them to "gobble" well. One party, consisting of R. H. Mitchell, the two Johnson brothers and Ellis Steams, drove to the old bed of the river and succeeded in shooting three gobblers, and a number of pigeons, squirrels, etc. Quail are very numerous, but it is all or nothing. They seem to move en masse, L'Eclarre.

Strange Capture of a Dove.—Pearisburg, Giles Co..

ous, but it is all or nothing. They seem to move en masse. L'Eclaire.

Strange Capture of a Dove.—Pearisburg, Giles Co., Va., March 15th.—Many years ago I was out with a neighbor's boy hunting for any kind of game that might chance to fall in our way. After proceeding about a mile without seeing anything worth a shot, I saw rise up from a corn shock some ten or a dozen doves. I saw they were coming directly overhead, and there being but one gun between us, I suggested a shot at them from my comrade, who had the gun. He did not seem inclined to shoot, when I remarked, with action to suit, that if he did not shoot I would yell at them as they came over my head and scare one to death. No sooner said than done, and down came one of the birds from the flock. When it fell to the ground I looked at my companion not a little surprised. After gazing an instant on his wide-stretched eyes, I ran to get my dove, which was about twenty paces away, fluttering as though its head had been severed from its body. I picked it up to ascertain, if I could, the cause of its strange proceedings. After a speedy external examination, and finding all the parts sound, I opened its mouth, and the mystery was solved. In its gullet, in sight, were a couple of corn grains, which it was carrying in its mouth, and which it had attempted to swallow, as it passed over our heads. They had become lodged in the throat and had caused strangulation to such an extent as to bring the bird to the ground. I removed the grains of corn and he went on his way re-joicing.

QUEEN CITY VS. AUDURON—Brooklyn, March 6th.—The shooting match between George W. Smith, of the Queen City Sportsmen's Club, and George Meister, of the Audubon Club, in which an unusual degree of interest was centered, took place yesterday afternoon at Byron M. Schultz's place, Burlade Plains, and attracted the largest assemblage ever gathered at a private shoot in this city. They shot at 100 tame pigeons each, from ground traps, twenty yards rise. The match was conducted under the Forester Club rules for ground traps shooting. Jonathan Sidway, Esq. acted as referee, while Messrs. Willis C. Jacus and Robert Newell officiated as judges for Messrs. Smith and Meister respectively, Messrs. John B. Sage and H. E. Stevens were appointed official score-keepers. The birds were first class, only two having been decided as "no bird" according to rule. The scores were as fol-

THE HUMMELSTOWN TOURNAMENT.—Hummelstown, Pd., March 25th.—To-day was a gala day here among the sportsmen who came together to have a grand shooting match of pigeons and glass balls. The first match was between Keller and Allen at 20 glass balls from a Card revolving trap:—

THE OWNERS AND MARKS 2 PIEZES TO THE STATE OF THE STATE O

The sixth match was for the pigeon match for \$114 in gold, and brought out thirty-six shooters to the trap. A strong wind blowing across the field, the birds were carried rapidly to the right, quartering from the trap, which gave a good chance to decide the merits of the shooters. First prize, \$60; second, \$30; third, \$30; fourth, \$14:—

GULF CITY GUN CLUB.—The third annual pigeon tournament of the Gulf City Gun Club will be held at Mobile, Ain, April 28th, 28th and 30th, open to all amateurs. No gun larger than 10-bore allowed. Charge of shot 1; ounces, Dixon measure, 1,106 or 1,107 the limit. Headquarters for sportseme, Gulf City Gun Club rooms? Opal Building, second story. All matches to be shot from If, and T. plunge traps, unless otherwise specified in the programme, and prizes awarded as follows: 50 per cent, to first; 30 per cent, to second; 20 per cent, to third. Five per cent, of all purses to be deducted for expenses. Under no circumstances will any shooting be allowed except at the score. For further information, apply to G. W. Tunstall, Chairman Executive Committee.

Mississippt—Union Church, March 17th—On the 2d of July last we organized the Union Church Gun Club, with a membership of ten. The following are the officers: President, John McArrz Vice-President, Den. Garrett; Secretary and Trensurer, John S. Gillis. The opening match was shot on the day of organization by only six of the members, from two Bogardus traps, 15 single balls each, 18 yards rise, Bogardus' Rules:—

CHALLENGE FROM BOGARDUS TO ERR.—Chicago. III.—Editor Forest and Stream:—As I shot a match at pigeons with Fred Brb¹ Jr., at 100 brids each, at St. Joseph, Mo. on 11th of March, and gave him two yards odds, he shooting attwenty-eight yards and I at thirty, and as he made a big score and won, now! would like to shoot him a match on even terms, thirty yards rise, Knglish rules, as I want practice for my English match, which comes off in July. As far as shooting for "big money" is concerned, I will shoot the match for the price of birds, or for from \$100 up to \$1,000 a side, and then if I win I will give him the same odds as before in another match, or I will let him name a match at 100 pigeons, any rise, double or single. If this match is accepted I would name the last week in April as the date, and St. Louis, Mo., as the place, or any other half-way ground. I will agree to furnish the pigeons for the match, and guarantee they will dy without going out to scure them up. As & Sch is one of the best shots in the country, I hope he may accept this, for I want to find a man who can equal me or beat me, and then we will go to England as a team.

A. H. BOGARDUS.

—The Forge House, at the Fulton Chain (Boonville), Adirondacks, has opened for the season.

The Rifle.

RANGE AND GALLERY.

MASSACHUSETTS—Boston, March 10th.—Mammoth Riple Gallery.
—The third week of the Consolation Riple Match at the Mammoth Gallery has shown the best shooting since the January series last month. Messrs. Arnold, Richardson and Harrison were moth Gallery has shown the best shooting since the January series last month. Mesers, Arnold, Richardson and Harrison were tied for the first turce prizes. They mot in the gallery last Wednesday to shoot off the tie; it was a splendid contest and was very close between the first two gentlemen, Mr. Harrison not shooting in his usual form. They shot 10 scores, each or a possible 400. Mr. Arnold made 573 (average 37 3-10), Mr. Richardson made 372 (average 37 3-10), Mr. Richardson made 372 (average 37 3-10), Mr. Arnold winning the first prize of \$150 yo one point, Mr. Richardson winning the second prize of \$10, and Mr. Harrison the third prize of \$8. Mr. Arnold took his success modesty, and was congratulated by one and all present. The other two fentlemen took their defeat kindly, and as Mr. Arnold was obliged to take the cars for home Mesers. Richardson and Harrison improved the time to shoot in this month's match. Mr. Richardson made five clean scores in all, which piaces him to the front for the extra prize of \$20 to any one making the highest number of clean scores during the month. He made eighteen consecutive bull's-eyes of the month. He made depicted consecutive bull's-eyes we clean scores in succession and two more bull's-eyes on his next score, which is the highest number over made in the gallery. The next highest is Mr. Arnold, with stateen consecutive bull's-eyes. Mr. Harrison made two more clean scores, making three in all, the highest possible acre in the match; and no doubt the three gentlemen will meet again next month to shoot off the horder named. The following is the standing to date 130 feet; round \$5; possible 40:— First Cleas.

E. F. Richardson, 40, 40, 40-120 | D. N. Sherburne, 23, 93, 380-117 V. V. Farrar takes the lead with three 285, but making in the order named.

New Jersey-Newark.—The tuird monthly tournament of the Tewark Central Rifle Association commenced on Monday even-

ing at the range of the Frelinghuysens, No. 61 Parkstreet. The tournament began at 8 p.m. The clubs will shoot in the following order: Monday, Essex and Amatour; Tuesday, Washington and Plymouth; Wednesday, Barnard and Frelinghuysen. The Washingtons and Plymouth shoot at Hill's range on Thursday evening. The match was the third contest between these clubs. and resulted in favor of the Plymouths by a score of 407 to 276.

PENNSYLVANIA.—The movement inaugurated at the meeting in Philadelphia, over which ex-Governor Hartranft presided, for the establishment of a rifle association, has taken shape, and a charter has been applied for. It is proposed to act in harmony with the ruling views of the present rife clubs, and to that end leave them to suggest where the range shall be located.

A LIVELY TEAM MATCH.—Washington, Pa.—Washington has been a Waterloe for Pittsburg. For some time a rille match has been talked of between us, distance 500 yards, and 15 shots to the goen taked of netween us, distance soo yards, and is squest to too man. The parties met on the lith inst. at 11,80 A.M. It had been snowing all the morning, but cleared off about noon. After a few sighting shots the game commenced. Hazlett first prostrated himself, and after due deliberation lot fly and three built-seyes were announced by the markers' flagman and "telescopist." Next were announced by the markers langman and "electorists." Areas. Enoch planted his heels in the snow and mud until the toes of his long number eighteens were just visible above the mud and tide. He rested firmly on a hemilost slab, legs describing a triangle with the long cross-piece left off, his arms resting on these legs, grasping the barrel of his rifle with the left hand and holding it grasping the barrel of his rifle with the left hand and holding it tight to his long, taper-like body, which at that moment contained seven hard-holled eggs, fourteen Taylor cakes and a gallon of cold tac (Ronch didn't drink anything stronger). He was ready to go; two bull's-eyes and one four came up through the telephone. Next came Rothwell, who after proteeting himself from the damp ground with seven gum blankets and eighteen empty wool sacks, brought his Remington to bear on that round black spot commonly called the "Buil." Let her went. Two buils and a four came rushing back to his listoning ear, and he retired from his soft couch, saving something about that blasted fish-tail wind. Now comes our suburban relatives. Jones took a similar a four came rushing back to his listening ear, and he retired from his soft couch, saying something about that blasted fish-tail wind. Now comes our suburban relatives. Jones took a similar position to Rothwell on the gum blankets and wool sucks. Jones will make a good shot after a while. The general formation of his zollogical construction is similar to Enoch, the only perceptible difference being in the facial expression occasioned by about haif a pound of "Jackson's best," which Jones always carries in his left check: indeed, we think his mouth runs less to the pound than his rifle. Well, after adjusting himself the fire few from his gun and one bull and two 4s was the result. Bell by this time had fully recovered from his experimental shots, and like a little man stepped to the scratch. Bell is a real good glass-ball shot; he won a turker the other day in the Grunger March at Pittsburg, breaking 47 out of 39 balls. He fixed his corporation d la Gildersleeve, and with an eye single to deadly purpose made two bulls and one 4. Dr. Bratt toed the scratch, his auburn hair waving beautifully in that fish-tailed wind referred to by Rothwell. Nothing danned, however, the Doctor was as auxious to extract three bulls. Adjusting his falty-like form in a similar manner to Hazlett—who by the way is rather a delicately built fellow, weighing only 205 pounds—the Doctor let go with 3 bulls to his credit; and so the shooting continued to the end, having been favorable from the start for little Washington. In our notes upon this match we ought not to neglect the favorable mention of "Guinnie" Wolf, the head flagman, who on this occasion did bimself honor in the graceful manner in which he waved the American flag, that starry emblem of our country's freedom having boen selected for denoting a bull'seye. Nor of good-natured Charley Gree, the boes marker of Western Pennsylvania. Charley said he "kir-cred" every bull with a sticker quicker than greased lightining, Nor of General John G. Ruple, who managed the telescope with such could, and prides himself on his correct score tables. The follow

CANADA.-The Canadian team who are to participate in the CASADA.—The Canadani each who are to periodicine in the rife competition at Wimbledon, England, this year have been selected. The team numbers twenty men, eight of whom are from Ontarlo, four from Quebec, three from Nova Scotla, one from New Brunswick, one from Prince Edward's Island, two from Manitoba, and one from British Columbia.

TEAM SHOOTING .- New York, March 22d .- Editor Forest and TEAM SHOOTING—AREW 1014 SHORT SEATHER FORCE and STREAM—PARKET FORCE and STREAM—PARKET STREAM SHOOTING THE AMERICAN LEADING TO BE A MEMBER SHOW IN THE STREAM SHOWS A STREAM STREA restrictions and inducements for further contests. Of all the let-ters published in your last edition, that of Col. Clark, of the team of 1878, strikes me as hitting the right nail square on the headThe Colonel quotos the gist of a paragraph on picking a team when he says: "It has been said that such a man is not much of an individual shot, but he would give himself up to the ceach and would make a good team man."

If you will review the scores made in the Long-rance Tourns Tyou win review the scores index it the Jong-range Touriament held at Creedinory last fall, you will find that the leading men made on the first two days \$3.25 points (within 9 of the best team score on record), and the Tournament was purely an individual match. Another Tournament shot in connection with the Spring Meeting (and I have many letters turging me to propose it). spring attenting that I mave many atters arging into 10 propose to, two series of two days each in one week, say Tuesday and Kednesday, and Friday and Saturday, with daily and aggregate prizes, would secure the attendance at Creedmoor of all the long-range men, and the first twelve could be taken, out of which to select a team This would secure the best individual shooters, and as Col Clark says, would try unriksmanship toxon of organization and rifles. So much is left to us in manthood to offer as a gallant challenge, and does not bear the appearance of a concession. Let them shoot the match on the conditions of the Tournament, mixing the shooters by chance on the several targets, and as they would obliged to stand at the tiring points fifteen feet in advance of the oniged to stand at the irring points intent reter it savance or into of scorers, the crowd could see clearly who was shooting make comparisons of individual rivals on the same target. It tofore the people have been unable to see the shooters, but had to be content with watching blackboards, at once uninterest ing and usually monotonous. EDWIN A. PERRY.

New York, March 22d.—Editor Forest and Stream:—I think I can safely say that Colonel Clark, of Foughkeepsic, can rost assured of the distinction of being the only long-range riffeman either here or abroad who would question the great utility and efficiency ner or around waven question her great unity and enternal of the American team system, as practiced in all of the interna-tional contests except in the first in 1874. It is universally ad-mitted that this was the strong feature of the American teams. If you asked any member of the foreign teams to account for their successive defeats they immediately attributed it to our superior team organization, and deployed the impossibility of superior team organization, and doplored the impossionity of introducing the same management in their teams, owing to their different individual temperaments. His belief that this American team management is a great obstacle to another international match can only be accounted for by supposing that should his views of individual effort he adopted the foreign team might think that Sampson had been shorn of his locks and would con fall an easy prey to the Philistines. I know enough of Englishmen, Irishmen or Scots, to say

I think I know enough of Englishmen, frammen or sects, or say they would not value a victory won under such conditions. There is ample opportunity to test individual merit in the preliminary contests for position on teams, and each member cannot fail to take rank as his merits deserve.

A rifle team depending on individual effert would stand no more chance of winning than a number of oarsmen in the same boat, each pulling his own stroke without regarding his companions.

boat, each plump in swin storker whom tregarding his companions, against a well-trained and coached orew. I apprehend that Colond Clark does not as fully comprehend the working of this system as though he had passed the ordeal of one or two international backles, with the working companion. The American tional matches with "very live" competitors. The American team system is founded on the axiom that "the whole is greater team system is founded out me around that the whole is ground than a part," and that "there is wisdom in council." Each member is guided by the results obtained by those who have preceded him, as also by the opinion of the "coach," after which he jant liberty to adjust his sights in accordance with his own judgment, which will be frequently more or less modified by the opinion. tons of his associates. It seems that this is a sagacious and com ions or his associates. It seems that this is a sagacious and com-paratively safe method by which to conduct a contest of the kind, and although future wants may lead to modifications and improvements on this plan, it is safe to say that its leading features, which have been the envy of foreign riflemen, will be pre served. The Colonel's allusion to the results of the the Times" Match in comparison with match for Palma is in itself a complete refutation of his theories and opinions. If he is desir-ous of ascertaining who is the superior marksman, he should challenge for an individual match for the champion-ship, in which he would be a redoubtable antagonist. I think such a match could be organized, and this would offer an opportunity for isolated individual effort, which would be much out of place in a team match. LONG RANGE

VERNIER SIGHTS FOR HUNTING .- Chicago, March 16th .- Edito Forest and Stream.—I have no wish to enter into any argument with "P." in regard to trajectories, and those who care enough about our respective opinions to re-peruse them, can satisfy themselves in regard to their relative value. But I must again protest against being criticised by any one who only writes from mory of the impression my communications made upon him "P." acknowledges that he has not my articles at hand to refer to but he asserts unconditionally that his views " were commented out he asserts unconditionally that his views "were commented upon unfavorably by several on this side the water, notably by Mr. Cleveland, who seemed to ridicule the idea of taking such a weapon into the field."

Now I have all my letters at hand, for I always preserve my Now I have all my letters at hand, for I always preserve my published communications for reference if necessary, and it is tortunate, in this case, that I have done so. There is not, in any one of them, the slightest reference to "P," or his communications, and I have no recollection of ever having seen any of them till some one called my attention to his letter of July 20th, '78, in which he comments upon what I had said about the use of the comments upon what I had said about the use of the comments upon what I had said about the use of the comments upon what I had said about the use of the comments upon what I had said about the use of the comments upon what I had said about the use of the comments upon what I had said about the use of the comments upon what I had said about the use of the upon the

'38, in which no comments upon what I had said about the use of long-range rifles in the field.

In the very first letter of the series I sent you, dated Peb. 23d, 1876, I said: "Of course no sportsman would think of taking the long-range target rifle, with its elaborate arrangement of sights, for the purpose of shooting game," and then went on with the remarks which have elicited so much comment from him. I Femarks which any elected so much comment from him. I should hardly have entered on the subject with such a sentence as the above, if I had known that an accomplished sports-an, as "P." evidently is, was actually using and advocating the use of such a gun. I only expressed my honest opinion, and am still not g little B prorised to find how greatly I was mistaken. But I shall Hittle gurprised to find now greatly I was insqueen. But I small never utter a word to prove that I was right, or to try to make proceed proceed the value of the argument, but shall simply continue to travel and hunt with a rife I can pack in a valles, and if ever "P." and I happen to meet, shall be happy to try a friendly match with him.

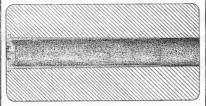

HUNTING RIPLES .- St. Louis, Mo., March 14th .- I am very glad to HUNTING RIELES.—St. Louis, Mo., March 14tt.—I am very gian to hear from our contributors "P." once more—lucal begun to think he was lost, "sure." His details are what we (who wish to learn) want. Now as he is almost alone, as far as I can ascertain, in making a light builtet shoot accurately, will he be kind enough to describe closely the builtet he uses. Wo know tho weight and making a light bullet shoot accurately, will he be kind enough to describe closely the bullet he uses. We know the weight and crifice already; but is it naked or feathered, smooth or cancillared?—bow many of the latter? and most of all, 'nhow much' of it bears upon the rifle? Is it the same 27fgrs. Express bullet that the Shnrys Co, furnish? I would like to know his opinion of the new mid-range Sharps 30in. barrel, hammerless, 40x70 straight shell, and which can be chambrered for a bottle-moked 50 to 160grs, shell, and take a 370grs. bullet? Would this gun be a good

one to take for a trip out in the mountains around Helena

Montana.

Not making a special business of hunting bear, would prefer
the fogrs, shell, if it would be enough powder-charge. What
loading tools are required? Does the mouth of the shell swell and require a reducer? A gentleman, late from the West, told and require a reducer? A generating and reducer and the ways, to a me that many shoot a smooth builet without a patch, which leads me to ask, if it is the builet that is made for a paper patch by the Company, or a tride larger to make up for the said paper patch! In regard to the Maynard, I am of the opinion that the content bullet referred to, with the 40grs. of powder, the weight be 300grs. proportion of 71. HUNTING R would HUNTING RIFLE.

SWADING EVERLASTING SHELLS.—I have experienced the same difficulty with shells that Bexas complains of, and having overcome it, sond you a sketch of swage. My rifle was sent to the factory for some slight alteration, and while there had the old reut out and a steel bushing put in. On trying my old tey were all found to be too tight, and even new ones

would stick after a few discharges. I got a piece of machine steel drilled with a 7-16 drill, and sent it to the factory to be chambered with the standard taper, but left a trifle smaller than the gun. It was very nicely done, and in a very short time every shell was with the sundard uper, but left a true sinking than the gul.
It was very nicely done, and in a very short time every shell was
reduced and they have given no trouble since. One point in reducing them is to give the shells a good coat of grease, which acts as a liner between shell and chamber, and moreover affords a means of regulating the degree of contraction, so that if the shell be found still too large, it may be further reduced by the use of

iore grease. It will often happen that the shell shows a bright zone of tact, and if the position of this ring corresponds on all of the tight shells, it would seem to indicate that the chamber was slightly crooked at that point, or that there was a light place behind it. In such case the chamber may be eased by putting a paste of flouremery, or crocia powder and oil on the bright part of shell, and then grinding out. The shell can be turned by making a hole in the base, cleaning internally with hot chloride of zine, then inin the base, cleaning internally with not enforce or zinc, then in-serting a stout, clean, brass wire and filling the shell with melted solder.

Machting and Canoeing.

CONSTITUTION OF THE N. Y. A.

ARTICLE I.-This association shall be called the National Yacht

ATTICLE 1.—This association shall be called the Authoria incur-ing Association of the United States.

ARTICLE II.—The objects of this association shall be the ad-vancement and improvement of yachting.

ARTICLE III.—The association shall consist of clubs, duly or-ganized, who are custaged'n promoting the purposes of the as-

noistion

Autrous IV ... The management of this association shall be en-Thrusted to an Executive Committee, consisting of twelve members, elected by the delegates from among their number, no two of whom shall be from the same club, of whom three members shall be elected each year, to serve for a term of three years, except at the first election; when four members shall be elected for one the mest election; when rour members shall be elected for one year, four for two years, and four for three years. Members of this committee shall continue in office, in case of a failure of election, until their successors are duly chosen. This committee shall from among their number elect a President and Trensurer, who shall serve for a term of one year, and choose Areasurer, who saud serve for a term of one year, and anoise a Secretary from among the members of some club belonging to the association. The Treasurer shall give bonds in the sum of \$2,000, for the faithful performance of his duties unto the Executive Committee. The committee shall bold and have custody of all the property of the association, in trust for the club

tody of all the property of the association, in trust for the cilus composing the same.

ARTICLE V.—Vacancies in the Executive Committee occurring between the annual meetings, shall be filled by the committee until the next annual meeting, when the vacancy shall be filled by an election of a new member to serve the unexpired term.

ARTICLE VI.—No person not a number of some club belonging to the association, whill be oligible to any officers were expected.

to the association, shall be clirible to any office or representation from any club

Approve VII -The annual meeting of this association shall be ARTICLE VII.—The annual meeting of this association sain be held on the second Wednesday in February of each year. Special meetings may be called by the Excentive Committee, and shall be called on the writton request of the delegates of five clubs, that are members of the association. Thirty days' notice of such ocial meeting, at least, shall be given.

ARTICLE VIII.—The election of members of the Executive Com-

AFFICES VIII.—I neelection to intenders of thank balloting paper, to be sent to the delegates of each club, enrolled in the association, at least thirty days before the annual meeting. These ballots being returned to the Secretary duly filled out, shall be counted by a committee appointed for the purpose at the annual meeting, in open meeting and the result then declared upon the plurality of such ballots for the candidates. ARTICLE IX.—Each club shall have but one vote in any election,

or upon any question, either in the annual or special meetings.

ARTICLE X .- New clubs shall be elected members of this associstion by means of ballotting papers to be forwarded to the deleciation by means of sanothing papers to be orwanted to the elec-gates of each club, upon a recommendation of two thirds of the Executive Committee, and if upon the return of such ballots duly filled out to the Executive Committee, such new club or clubs shall appear to have been elected by a majority of all the clubs. the Executive Committee shall declare such election and give the newly elected club notice thereof.

RTICLE XI.-The annual membership dues of each club to ARTICLE ALI—The annual memorrang dues of each club to this association shall be the sum of fifteen dollars, due on the 1st day of January in each year, except the first annual dues upon Joining or forming this association, which shall be then due.

ARTICLE XII .- Any violation of the rules of the association, by any club which is a member, shall render such club liable to sus by the Executive Committee until the next ar

ing of the association, and to expulsion by a two-third vote of the

ing of the association, and to expurison by a coverint vote of the clubs represented at such meetings.

ARTICLE XIII.—It shall be the duty of the Executive Committee to hear all questions presented to them, to frame rules and to determine and settle all questions and disputes relating to yacht racing or yachting which may be referred to them for decision.

racing or yachting which may be referred to them for decision, and further the committee shall take such other steps as they shall consider necessary or expedient to carry into effect the objects of the association.

Airtold XIV.—The Executive Committee shall submit the salling rules, etc., to the meeting of the association, and no alterations shall be made by the committee, in rules which have been approved by the association, except by a vote at the annual meeting of the association. Notice of any proposed alteration of the rules shall be given to the Secretary, and by him to each club in the association at least, two months before the annual meeting. the association at least two months before the annual meeting.

the issociation at reast two months before the annual meeting, at which the sum is to be presented for action.

ARTICLE XV.—No addition, alteration or amendment shall be made to this constitution at any meeting, except by a two-thirds vote of the clubs represented. At least three months' previous notice of any such proposed change must be given to the Secretary and the such proposed change must be given to the Secretary and the such proposed change must be given to the Secretary and the such proposed change must be given to the Secretary and the such proposed change must be given to the Secretary and the such proposed change must be given to the Secretary and the such proposed change must be given to the secretary and the such proposed change must be given to the secretary and the such proposed change must be given to the secretary and the such proposed change must be given to the secretary and the such proposed change must be given to the secretary and the secretary an tary and by bim due notice given at once to each club belonging to the association.

Since the above has been printed, the following clubs have joined

Since the above has been printed, the tonowing cribs have joined the Convention by appointing delegates: Southern Yacht Club, of New Orleans, La.; Paronia Yacht Club, of Jersey City, N. J.; and twenty regularly organized yacht clubs are now participating in the formation of the National Yachting Association of the United

The following special request has been sent to all clubs

The following special request has been sent to all clubs:—
"In order to keep this movement properly moving along, with
as little loss of time as possible, it is hoped that all yacht clubs
flavoring the idea of a national yachting association will adopt
this constitution at their first meeting after its receipt, to afford a
basis on which to start, and rules for the guidance of the delegates:
It will be apparent to all, that this is the first necessary step, and as so many different ideas may base on this constitution, and so far apart from each other, we hope that any alterations or amendments apartizion eaca ottar, we hoje that any alterations or amendments to It will be made a separate matter, and the constitution, simple as It is, be adopted and accepted without any present alteration, as that would oblige our sending the particular alteration to every other club for adoption before it would become binding, and we would never be able to have a constitution. Blank balloting pawould never be able to have a constitution. Bank balloting pa-pers will be sent to your delegates to be filled out as their choice for members of the Executive Committee, and a return as early as possible is respectfully requested."

Address all business to Mr. John Frick, Seretary of the Con-vention, P. O., box 2,507, New York.

THE N. Y. A.

The following letter shows that the N. Y. A. is rapidly extending. We have favorable reports from the East as well. This makes the third club which has foliacd since the Convention:—

PHILADELPHIA, March 15th, 1880.

John Frick, Esq. PHILADELPHIA, March 15th, 1880.
DEAR SIR:—Your communication, relating to the National Yachting Association, reached us in good time, and at the meeting Raduling Association, reached us in good time, and at the meeting held March 10th was adopted, and Commodore A. F. Bancroft, Vice-Commodore Chas. II. Magee, and Robert Austin were appointed oblegates. They will present their credentials at the proper time.

Yours, Chas. S. Salin, Secretary Quaker City Yacht Chub, 263 N. Third attrect, Phila.

MEASUREMENT.

BOSTON, March 10th.

Editor Forest and Stream :-In relation to the proposed new rule of vacht measurement In relation to the proposed new rule of yacht measurement which you have advocated so ably in your columns, i.e., the use of the three factors of length, beam and depth, one fact seems to have escaped notice. This is, that it is a practical return to the system originally adopted by the English Government and our own for tonage measurement, and which was only changed because an arbitrary form of stating the formula cnabled marine.

ranse and actional your of sample in bloud evade its intent.
The rule of the English Yacht Racing Association is substartially the same as this old formula. It is the length being found by specified means; to take that length, multiply it by the breadth. by spooffied means; to take that length, multiply it by the breadth, then multiply the product by half the breadth and divide by ninety-four. Now why multiply by half the breadth? The answer is, because when that rule was originally adopted, vessels were almost universally built with a depth of one-half their beam. This one-half the beam was therefore used, as a historical fact, to represent the depth, and it practically was the multiplication of the product of the length and breadth by the depth. So long as this was the general construction of vessels, the rule worked well. When, however, builders began to construct then of less or greater depth than one-half the breadth, the rule or formula becam to work partially to such constructions as had an increased began to work partially to such constructions as had an increased What you propose to do therefore, and what the Nova depth. What you propose to do therefore, and what the Nova Scotia Yacht Squadron has done, is merely to alter the wording of this ancient, tried and known formula so that it shall apply as equitably to all classes of model as it formerly did to the class of vessels for which it was devised. You put the word "depth" in place of the words "half the breadth," which were intended to mean depth, and did, in fact, so mean. The question to be considered is, whether such an amendment, restoring the ancient meaning and effect of the rule, will not render it worthy of adoption. Let us hear from the objectors to such a course. Let them give some good reason why it would not work fairly in practice, and develop the best type of yacht. I have before me a recent and develop the best type of yacht. I have before me a recent and develop into best type of yacm. I have before me a recent letter of Hor, F. C. Sumichinasi, Rear Commodore and Screetary of the Royal Nova Scotial Vacht Squadron and member of the Yacht Racing Association, in which he says of this rule you pro-pose: "The advantage of the rule is that it leaves a builder un-fectored, and he may build deep and unrow, or bearny and shal-fettered, and he may build deep and unrow, or bearny and shalfettered, and he may build deep and unrow, or beamy and shallow, or moderately deep, as he pleases. It has been found to workvery well in practice, and to enable different types to be tried toyether on a fair basis. The yachist built under the rule have a goodproportion of beam to length and a sufficient depth to render
unnecessary recourse to the abomination of shifting ballasi,
which is strictly prohibited." This letter was written to the Secwhich is strictly promined. In his letter was written to the Sec-retary of the National Yachting Association Convention offi-cially, and demonstrates the value of that organization in collect-ing evidence upon this subject, if nothing more. I notice some-convenience and the subject, if nothing more in notice some convenience and the subject is not object to joining the National Yachting Association because it indorses shifting balliast. National Yaoning Association occasion indorses shirting cannot. Such an idea is as incorrect as it is unjust. No such indorsement has been made. When it is done it will be time to object on account of it. I believe the National Yaohing Association will not indorse anything fatal to good seamanship, and your correspondent may safely calm this fears and join. The Association is bound to be a success, may it is a success if he does not, and it will

adopt such rules as shall place seamanship and seaworthy yachts to the front. All we want to ascertain is the bost, and when ascertained, adopt it.

DAYD HALL PELL.

Our correspondent is clear and logical on the measurement question. The rule now in force with the Royal Nova Scotta Y.

C. is the only one in America an intelligent person need not be ashamed of. It is, in fact, the best rule in existence, doing away with the disconnection of the property of the property of the property of the property of the property of the property of the property. ashamed of. It is, in fact, the best rule in existence, coing way with the discrimination offered by the English rule to narrow beam and the premium we place upon "pot-bellies" by using length as the orticrion. The "three dimension" rule is fair to all classes, handleaps no form or model, has no tendency to produce vossels of any special form, offers no loop-hole, or back door by length as the criterion. which unfair matching could be made, is not open to any of the objections brought against other rules now in vogue. In short, a multiplication of the three chief dimensions corresponds in every way to the five axioms established in our issue of Sign and the latest statement of the model of the partial rule.

Bith, as necessary characteristics of any fair and impartial rule, which shall not in the least interfero with the modelor's preferences in design. To put the rule into shape; Ta-LxBxD, In which T stands for tonnage, or size, or anything it may be wished to call the unit of measurement; L for the mean length of the stands of the stands of the mean length of the stands wished to can the min of measurament, but may at each end to the water-line length; I for the extreme beam wherever found, and I) for the bona had been the bona had been the bona had continued to the water-line length; I for the manufacture of roun underside of elections, and I) for the bona had continued to the same than the beam been the bona had continued to the bona had been the custom to divide by alto obtain there or tons, but even that may be omitted for the purpose of simplication, without in the least interfering in the relative sizes obtained. We have here simply interfering in the relative sizes obtained. We have here simply sketched out the general features of a rule lwe, in common with every one anxious to substitute something rational and not hurtful for the vagaries of the day, hope to see come into general use ful for the vagaries of the day, nope to see come into general use throughout the country. For that purpose we appeal to the Na-tional Yachting Association, trusting that they will bear in raind that the question of measurement is one of the most important and pressing which will be submitted to them. As long as they keep the principles of the rule outlined in view, it matters comparatively little about the details. In the meantime we may congratulate ourselves in having such able, co-workers in behalf of asound rule as we know many members of the Association to be.

THE HERRESHOFF SYSTEM.

WAY'S STATION, Bryan County, Ga., March 14th.

Editor Forest and Stream:—
I have read with pleasure in your issue of March 11th, the arti-I have read with piessure in your issue of March Lith, the arti-cle on the steam yacht built by the Herreshoff Mfg Co., of Bristol, R. L. and think it only due to those gentlemen to call your attention to one very important fact that was omitted in the article, viz., the impunity with which their boilers use sait water. I have owned two of these boats since 1875; one was built for me I have owned two of these boats since 1875; one was built for me then and a much larger one last year, and though my boats have been used almost always in salt water I have had no trouble, and the inside of the old coil is perfectly free from salt or scale to-day. I wish you would publish this, as it may do some one who wishes a hoat a good turn. You know that I have no interest in writing this, other than to approve a good thing.

We publish the above indorsement of the Herreshoff coil with planesure. It has all along been our desire to see the coil come

We publish the above indorsement of the Herreshoff coil with pleasure. It has all along been our desire to see the coil come into more general use as its many advantages will tend to multiply high-speed launches in our waters to an unparelleide extent. There are thousands of miles of bays and estuaries from New York to Calals, Me., never yet churned by the screw of a steam yacht. With economic and safe builders, fine cruising is to be got out of a 60ft. "tea-kettle," if suitably designed, and that with a combination of very fair seagoing qualities. But to that end we must depart from the provailing light-draft river boat and adopt a hull you can get "into" and not merely "on to."

"CORINTHIAN" ANSWERS.-Editor Forest and Stream:-In "COMINTHIAN" ANSWERS.—Editor Forest and Stream:—In "A Reply to Corinthian" I find my monitor arguing so well my side of the question (making the little beamy center-board Midge de-feat the big long cutter Mariel, and as he also praises the Mad-ery of like type). I find it only requisite to explain that there was no slur made or intended upon the "owner of a little cutter," knows the owner designed her.

CORINTHIA CORINTHIAN.

YACHTING NEWS.

SALEM BAY YACHT CLUB.-This club has now sixty regular and forty honorary members, thirty applicants for membership, and a fleet of nearly forty yachts—most of them over twenty

tons.

DORGHESTER YACHT CLUB.—They all do lt! Here is Nimbus coming out with an iron keel. This fast and able yacht will fly the Dorchester Yacht Club flag the coming season, Messrs. King & Clark having recently purchased her of Mr. L. H. Biglow, of New York. The Nimbus is Sift. in length over all, 33ft. on water line; draught, 4ft. 6in, and about 6ft. head room in cobin. She was built by Herreshoft, is very fast and able, and a first-class yacht in every way. An iron shoe has recently been put on her keel. First regular meeting of the club this season occurs April 23. April 2d.

April 2d.

JERSEY CITY YACH! CLUB.—Officers for the year: Commodore.

Roger M. Sherman, of New York; Vice-Commodore, G. L. Winn

Treasurer, J. H. Carnes; Secretary, G. H. T. Doggett; Measurer

Geo. N. Weston; Board of Directors, H. Bennett, William Clark

Charles E. Gardner, C. A. Smith, J. A. Hilton and Dr. Yondy.

NEW BEDFORD YACHT CLUB.—The New Bedford Yacht Club is NEW BEDFORD YACHT CLUB.—THO NEW Hedford Yacht CHB 18 rapidly growing and taking rank among the leaders in all that apportains to the sport. It is one of the four "outsiders" admitted to the Corinthian races of the Seawanhaka Y.C., and now has a feet of nearly sixty still. Its location is exceedingly favorable as a half-way station between the East and the Metropolis, and is rapidly attaining a position which other clubs near by will not be able to equal for a long time to come. The officers for the year rapidly attaining a possion which other Arabid Scale of Arabid Scale of equal for a long time to come. The officers for the year are: Commodore, J. Hawes; Vice-Commodore, Francis Hathaway; Fleet Captain, Ed. S. Brown; Secretary, Go. W. Parker; Treasurer, V. A. Mackle; Measurer, Edgar B. Hammond.

Fleet Captain, Ed. S. Brown: Secretary, Geo. W. Parker; Treasurer, W. A. Mackie; Measurer, Edgar B. Hammond.

The Eosenta.—This well-known sloop, once of New York, now the property of Mr. Parkman Dexter, of Boston, will be altered from a center-board to a keel. It is most gratifying to see how rapidly the dieas advocated in these columns are being accepted and acted upon in practice. When the keel question was first prominently brought to the surface through this journal, sundry little contemporaries raised a howl in a feeble way, but, it up-pears, to no effect. Many were the doubting Thomases who should their heads and thought us quite on the wong tack. But we are content to let all have their opinions and bide our time. What we have stremously sought to effect, is the amelioration of cruising and seagoing qualities in our yachts and yachtsmen, and from the evidence continually cropping up, success has followed our labors oven more rapidly than hoped for. In Boston, the center of the property of the proper

"off-color." Now let Eastern men abolish measurement by length, and a healthy style of model will soon supplant the shingle-bottoms and the dough-bags. New York will follow in

AND ANOTHER.-Moderate beam is gaining ground. Mr. S. W. Burgess, a racing member of the spirited Beverly Y. C., is having a new yacht built, something after the style of the "Irish Fisherwe presume with the cutter rig. She will be 23ft. long

Undine.—The Hon. Benj. Dean proposes to give his recent

acquisition hollow spars and get out of her all she is worth.
POUHKEERSIE CANOR CLUB—A new cance club has been organized at Poughkeepsie, N. Y. Commodore, W. D. Lintz Yice-Commodore, D. C. Bloomfield. A club cruise will be undertaken In midsummer,
YACHT FOR SALE.—We call attention to a fine sloop yacht of-

YACHT FOR SALE.—We call attention to a fine sloop yacht of-ferred for sale in another column. If we mistake not, sho was modeled by Chas, Hillman, and having inspected her frequently while building, can youch for her as an exceedingly well-built vessel and an excellent bargain. A smart man also wants a borth aboard a small sloop. Here is a chance for some one to secure an active and intelligent skipper. NATIONAL YACHTING ASSOCIATION.—We can send copies of the constitution to applicants. Next meeting, April 14th, in New York.

Seawanhaka Yacht Club.—Rule V. of the sailing regulations has been amended to read: "Yachts in Corinthian races must be has been amended to read: "Yachts in Corinthian races must be manned by amateurs exclusively. The sailing master, cook and steward, if carried, shall remain below, and not appear on deck; and none of them shall in any way direct, or assist in the management or working of fite yacht. Any infringement of this rule will forfeit all claim to the prize." And the following addition has also been made to the rules upon motion of Mr. Robert Center: "Every yacht sailing in any match, or regarda, shall have on board, during a race, a member of this club."

NEW YACHTS.—Docker, of South Brooklyn, will soon launch a new schooner for Ex-Com. Munsell, A. Y. C. "Dick" Wallin has built a number of small boats, including a yawl-rigged craft for J. B. Henry, of Stonington, Conn.

NEW STEAM YACHTS.—Mr. Lorillard's new steam yacht, which Sam Pine is building in Greenpoint, L. I., is 98-ft. long and 16ft. She will receive a fine compound engine from Messrs Ward, Stanton & Co., of Newburgh, N. Y.

Haverhill, Yacht Club.—Officers for the year: Commodore.

HAVERHILL AGENCY CLUB—Unders for the year Commodule F, Harris, sloop Ablie M., Yice-Commodule, G. A. Tuxhury Emma L.; Fleet-Captain, J. E. Heath, Hattie; Secretary, Charle H. Stacy; Treasurer, W. M. Dresser; Mensurer, H. J. Doane Regatta Committee: Fairfield Harris, E. F. Brown, F. C. Hunt ington. Mr. E. F. Brown, who has served a number of terms, declined a re-election as Commodore, but remains on the Regatia Committee. The club is prospering and adding members and yachts to its rolls.

YACHTING ON THE LAKES.—The Belleville Intelligencer, of a recent date, says: "Captain Outhbert has entered into an agreement with Mr. George D. Nichol, of Toronto, to build a standing keel yacht for that gentleman at his yard at Trenton, Ont. This craft will be cutter-rigged, and especially fitted for cruising pur craft will be entter-rigged, and especially fitted for cruising purposes; work will be commenced at once, and the yacht is to be finished by the 15th of May. The dimensions of hull will be as follows: Length over all, 29tt. ôln.; length of keel, 2tt.; breadth of beam, 8tt. ôln.; draught of water, 4ft.; tomage, Y. It. A. measurement (same as B. Q. Y. C.) 6 tons; bullast all iron, I; tons on keel, i ton keelson, and the remainder to fit garboards. There will be about 5; feet in height under skylight. She will be strongly built, and will be in all respects a safe and comfortable craft. The model and specifications were furnished by Mr. C. P. Kunhardt, the able vectoir general for forers a Mos Treeam, New York." the able vachting editor of FOREST AND STREAM, New York.

A CLUB-HOUSE IN FLORIDA.—An excellent idea has been ad-A CLUB-HOUSE IN FLORIDA.—An excenent idea has been no-vanced by a gentleman now in Florida, for the construction of a fine yacht club-house on the old property, "Dungeness," on Cumberland Island, at the mouth of St. Mary's River. As Florida Cumberland Island, at the mouth of St. Mary's Miver. As Florida waters are attracting a greater number of yachts to the warm latitudes every year, the erection of a house at a centrally located rallying point would do much to increase the annual exodus of the cruisers southward. Who will take hold of the project? Mount Desert for the summer, Hampton Roads for early spring and fall, and Florida for the winter. The most enthusiastic authors are considered to the summer of the second summer of the second ser could ask for no more.

DRIFF.—Mr. Dudley Hall, of Boston, has become the owner of the Fleur de Lis, Mr. Waller, of the Dauntless, having parted with her...Mr. Fox, of Boston, has hired the Sunbeam, sloop, for the season; she is to be raced. ..The schooner Alice, 84ft. long, has been bought by Mr. W. L. Lockhart, and is now being overhauled. Senson; sine is to be faced, rate schooler Archeroff reach had been bought by Mr. W. L. Lockhart, and is now being overhaulted in East Hoston ...The well-known sloop Undine was knocked down at auction to Mr. Benjamin Dean, of the Hoston Y. C., for \$3,050 after some spirited bidding, in which New York parties were represented... Schooner Madeap has been sold by Mr. J. R. Dockray, of Boston, to Mr. Frank D. Shaw Sloop Witsome, formerly belonging to Rear Commodore Norton A. Y. C., has been purchased by Mr. F. W. Hinnan, of New Haven, Conn... Smith & Terry, of Greenport, are rebuilding the schooner Viking for Mr. F. Stott... N.G. Herreshoff, of Bristol, has built a 35tf. catamaran for Boston owners... Mr. G. W. Peabody, of Boston, has brought a 50tf. schooner from Long Island waters... Schooner Romance, E. Y. C., is being spun out aft... 'Wim. Gray, Jr., has entered the sloop Forla' in the Dorchester Y. C.; she will receive a through overhauling.... The Rebecca, E. Y. C., once belonging to Mr. J. G. Bennott, of New York, as a sloop, is being lengthened and deep lengthing to Mr. J. G. Bennott, of New York, as a sloop, is being lengthened and deep. overhauling.... The Rebecca, E. Y. C., once belonging to air. J. v. Bonnott, of New York, as as sloop, is being lengthened and deepenced to improve her rough water qualities in accord with modern ideas... Woods Bros., of East Boston, have the schooner White Cloud in hand for new decks... Com. Stone, East Boston Y. C., will again hoist his flag aboard the smart Hetor, sloop... Lend, keel sloop, Boston, is receiving a housing topmast: good for Lend. The rapidity with which keels, lead and handy rigs, are displacing theology annexes our most sangular expectations, and Fornset. The rapidity with which kees, tend and analyings, are displaced the sloop, surpasses our most sanguine expectations, and Forner AND STREAM has had no little to do with induceing these changes ... Hutchins & Pryor, South Boston, are building a steam Wacht, & X & X 4ft., for Capt. Gott, of Mount Desert....The South Boston Y. C. had better drop "machine politics" and sand bugs as well.

PUBLISHERS' DEPARTMENT.

So SMART.—Some newspapers have been so smart in trying to avoid mentioning the name of Hop Bitters in connection with their great and liberal prizes for boating matches, for fear of giving them free advertising, have used so often instead the word "Donors," "Medicine Man," Rochester "Manufacturers," "Boat Race," Hanlan," "Couriney," "A. T, Soule," "Regatta," "\$6,000 Prize," etc., etc., that each and all of these names, words and figures have become known to refer to

and mean Hop Bitters more pointedly than if the name had been mentioned without dodging.

There is no use fighting against the fates. Hop Bitters has got the field against the world this year, and every reference or hint to rowing matches or regattas, will mean Hop Bitters as plainly as words can express it, and the paper that tries to dodge it, will help advertise them all the more, which will make the public laugh and please the proprietors. For our part we propose to say Hop Bitters every time, and rather think, on the whole, we should, as it is a good thing all round, medicine and all.—Sunday Heruld.—[.Adv.

CHCAGO, ILL., Jun. 1st., 1880.

CHCAGO, ILL., Jun. 1st., 1880.

GENTLEMEN: I have used Warner's Safe Kidney and Liver Cure with the greatest satisfaction. It is the only remedy I have ever used that I can recommend to my friends, as it has cured me of Bright's Disease of long standing, after having visited the White Sulphur Springs of Virginia, and trying innumerable so-called "remedies" of the day. Having resided here for forty-seven years, my friends will be glad to see this statement. The discoverer, is indeed a public benefactor.

WILLIAM H. PATTERSON.

MAX'S REPLY TO "M."

Many thanks, dearest M., for the letter, You wrote me a few week weeks ago. Don't apologize, dear, for your rhyming, As in this case it's quite comme il faut.

And I trust you won't think me conceited, If poetry I, too, affect,
For doggerel from a doggle, I take it,
Is surely what one might expect.

I am glad you were pleased with my picture, But I know you won't mind if I say That at least half a dozen young ladies Have praised it in just the same way

They speak of me as "Such a durling!" They say I look "ever so wise,"
And they rave of the depth of "expression"
To be seen in my lovely soft eyes.

But I feel that not one of the many Sweet words they repeat is more true
Than those that were written at Marshiands
And sent to your Maxie by you.

Accept, then my very best thanks, dear, For all the kind things that you say, And believe in my heart I shall cherish Your memory forever and aye.

I am growing, I fear, rather tedious, So no longer your patience I'll tax,
But, with love and best wishes, say Farewell,
Yours ever, most faithfully,
St. John, N. B., March 13th, 1880.

A BATCH OF RECIPES.

BAKED COD OR HADDOCK .- Take a cod or haddock of BAKED COD OR HADDOCK.—Take a cod or haddock of five or six pounds; keep the head on the fish; do not have it opened too deep; make a stuffing of half a pound of bread crumbs, a teaspoonful of very finely divided parsley, a teaspoonful of salt, a saltspoonful of ground pepper, a half teaspoonful of dried mixed thyme and pepper; a hart teaspoontul to three mixed tolyme and marjoram; take two eggs, beat them all up together, add a teaspoonful of melled butter, mix all thoroughly, and fill the fish with a strip of cloth half an inch in width, and of sufficient length to hold it in the pan, but not so tight as to spoil its shape; bake in a moderate oven one hour and thirty minutes,—Dem-

MILK SAUCE FOR FISH.—One and a half pints of milk, two tablespoonsful of flour, one half of butter, one half two transpoons to hold, the had to duter, one had of a small onion, two sprigs of parsley, one heaping teaspoonful of salt, a speck of pepper. Put a pint of milk on to boil with the onion and parsley; mix the onion to a smooth paste with part of the half pint of milk. Then add the rest to make it thin, and when the milk boils stir this into it. Let it boil ten minutes longer, then add butter and salt, and strain.—Manual of Cookery.

stir this into it. Let it boil ten minutes longer, then add butter and salt, and strain.—Manual of Cookery.

ROAST DUCK.—Select the linest pair of ducks from the game bag; dispose of the feathers as suits your convenience or inclination; put the ducks for a few minutes into boiling water to loosen the skin, which must be peeled entirely off in order to be tender. Wash them thoroughly inside, and wipe the outside with a dry cloth. Now put an onion and a piece of salt butter, equal to it in bulk, inside each bird; tie a piece of buttered paper or a slice of bacon over the breast. Roast half an hour, basting frequently with melted butter. Ten minutes before they are done, remove the paper or bacon and sprinkle the fowl freely with salt. Garnish with thin slices of broiled bacon, rolled up.

BREAD SAUCE FOR GAME.—Two cups of milk, one cup of dried bread-crumbs, one quarter of an onion, two tablespoonsful of butter, salt and pepper. Dry the bread in a warm oven, and then roll out into coarse crumbs. Now sift them and the fine crumbs which come through the sieve, and which make one third of a cuptul. Put on to boil with the milk and onion; boil ten minutes, then add one tablespoonful of butter, and seasoning. Skim out the onion. Fry the coarse crumbs a light, crips brown in one tablespoonful of butter, which must be very hot before the crumbs are added. Stir over a hot fire for two minutes, being careful not to burn. Cover the breasts of the roasted fowl, and serve with it.—Manual of Cookery..—"The blessing of a house is goodness.

the breasts of the state and of Cookery.

HOUSEKEEPING.—"The blessing of a house is goodness. The honor of a house is hospitality. The ornament of a house is cleanliness. The happiness of a house is contentment." In remembrance of these, keep your house and do not let your house keep you.

REBECCA.

—A New Haven paper contains an advertisement calling for "a well-trained 'cat-dog,' one that is kindly disposed to the human family, but has a decided antipathy to cats and favors their complete annihilation. For such a dog a reasonable price will be paid. Address, naming breed and price, "D.," box 852."

and price, 'D., 'DOX 502.

—One Staten Island dog whipped another Staten Island dog the other day, and the owner of the whipping dog for damages. It was decided to introduce the two combatants in evidence, and the belligerent brutes were accordingly brought into court. While the Justice was scruting-with the second to the property of the property o court. While the Justice was scrutinizing their respective points they broke loose, and within about two seconds that court-room was an apparent dog-pit. The dogs dashed and leaped and sprawled about, the lawyers and spectators climbed up on to the tables, a stampede ensued, and finally the dogs were parted, while their owners were ordered to pack off and sottle their differences elsewhere.

Shot-Gun and Rifle-Powders Revolutionized.

Champion Shot Gun and Rifle POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. CaptainBogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

ADay's Grout Hishing in Ireland.

PICTURE to yourselves, O long-fleeced and much enduring victims of American hackmen, the face of one of these unsurpassed extortionists, on being handed 12 cents for the conveyance of yourself and baggage on a dark night the distance of one mile into the country from a railway station in the respectable time of 5.30 The same unsophisticated Paddy, that one April night, two or three years ago, landed me at my friend Jack's hospitable door in - County, Ireland, is possibly now mounted in state upon the box of a gorgeous New York chariot, waiting wearily at the Cunard landing stage for the occasional and unsuspecting Briton who, in the innocence of his heart, calls lightly "for a cab."

Many of my readers have been in Ireland, and will remember that the rapidity with which they were conveyed at 6d. per mile along the excellent highways of that interesting island was as a rule in inverse ratio to the progressiveness of the country through which they passed. This, however, is a ticklish topic. The political state of Ireland, Mr. Parnell and the famine will be upon us if we do not, in the words of my friend Jackwho is a shining light and a "first-flight man" in the thunder and turf hunt—"haste back" to the shelter of that hospitable roof where he himself keeps bachelor hall, as the last representative of a long line of worthy Irish gentlemen, who in due succession "pinked" and "winged" their neighbors or made targets of themselves; performed unparalleled exploits among the claret bottles and bumpers of rum shrub kept or supported the county hounds, and in old days sat in the Irish Parliament to the detriment of their purses and their paternal acres.

One of these gentry was so passionately devoted to the field of honor that it is said, on one occasion when acting as second he was reminded by his vis d vis, a personal friend of his own, that his principal's spare pistol which he held in his hand was, contrary to ctiquette, cocked, "Well, cock your's and be d--d, and let's have a slap at you in the meanwhile," was this bellicose individual's reply, and tradition says that shots were actually ex changed, pour passer le temps, between the seconds.

More pacific thoughts, however, circled round the time-More pacific thoughts, however, circled round the time-honored mahogany upon that April night. Anything but gouty limbs were stretched beneath it, and the grim gentry from their canvas on the walls must have looked down with contempt at the dull circulation of the de-canters upon the table, under which doubtless during life they used to fall with nightly regularity, hopelessly and gloriously drunk. Contempt would certainly have been the uppermost feeling in their manly becomes had they been able to listen to the enthusiasm with which their degenerate representative and his guest discussed old angling experiences and planned expeditions to the banks of streams that to them had been but landmarks of the chase.

The Irish squire is for some reason or other not nearly The frish squire is for some reason or other not nearly so much addicated to trout fishing as his English or Scottish brother. It may be that the abundance of salmon has generated an indifference to the capture of smaller fry, or more probably that the impulsive nature of the Hibernian character finds in the hunting-field and the Hibernian character finds in the hunting-field and the race-course something more congenial than in the contemplative sport of the angler. Our side of the Atlantic can offer something of a parallel to this in the nost total obscurity under which fly fishing south of the Potomac, till the last few years, remained.

When old times had been fully discussed and old scenes in other lands had been revisited, we laid our plans for the following day, or rather Jack did, and a river, as every brook in Ireland is called, was fixed upon, lying some seven or eight miles distant from the house. April maintains parhans its traditions more consistently in the

some seven or eight miles distant from the house. 'April maintains perhaps its traditions more consistently in the south of Ireland than in more fickle latitudes—I should say its English traditions—for what do the anglers of Nova Scotia and Now Brinswick, of the White Mountains and the Adirondacks, of Michigan and Minnesota, know about that balmy, sweet-smelling month that Transatlantic fishers love? We in Virginia are among the privileged few upon this side to whom the long, gradual dawn of spring gives, in common with our British cousins, an ideal April, or even a superior one to their's for angling purposes.

dawn of spring gives, in common with our British cousins, an ideal April, or even a superior one to their's for angling purposes.

As the dog-cart rolls along the smooth and well-graded Irish turnpike everything bodes well for a successful day. Sort showers fall, sparkling in the fittul sunbeams that burst now and again through the rolling clouds, and light up the vast expanse of soft green sward that rolls uninterrupted save by still greener banks, bristling with yellow gorse, to the low-base mountains whose swelling outlines cut the horizon; a landscape in which the shades of green vary only with the shadows of 'the clouds that flit across them. The red or brown fallows, over which the harrow drags its slow course, hidden among clouds of dust that in the springs of other lands form such a prominent object to the angler's earlier pilgrimages, are here scarcely to be seen.

The ivy hangs in thick clusters and festoous from gray stone bridges, hoary with age, that lift us over sparkling streams whose amber color bespeaks their boggy source. An occasional mill-dam, skirted by velvety meadows and fringed by willows, reflects on its broad surface the changing skies. We miss the stalwart teams, whose belies go tinkling down the roads of the sister island; but in their stead pass long rows of donkey carts, which (pardout the reliable) is represent the one-horse system of agriculture here in vogue.

bells go tinkling down the roads of the sister island; but in their stead pass long rows of donkey carts, which quardon the "bull") represent the one-horse system of agriculture here in vogue.

Now we are rattling through the streets of the little market town, where Jack officiates in the dignified position of a Justice of the Peace, to the chagrin of the insurance company who are interested in his life. Here, too, at the outskirts of the town, rises the Church of England, proud and forlorm—a relic, Mr. Parnell, I suppose, would say, of the tyrannies of the past, and where on Sunday mornings Jack unfailingly takes his solitary seat in a great square pew beneath rows of nurble tablets on the chancel walls that commemorate the sainted deeds (Heaven save the mark!) of those illustrious progenitors who transmitted to him, as he says, with a peculiar comic expression, the undoubted blood of Brian Boruhm, Jack was educated across the channel, and, unlike many of his neighbors, is able to judge of social importance from a national rather than an obscurely provincial point of view, and is fully able to appreciate the strained ideas of the untrayeled Irish gentry as to their own importance, so inimitably satirized by Thackeray.

The rector himself, whose congregation may on fine days number thirty all told, is one of the now scarce clericals whose performances behind the hounds or round the mahogany are more brilliant than when clad in his sacerdotal robes. He is standing at the rectory gate as we pass, and I can see the old gentleman's eyes sparkle as Jack shouts out an invitation to dinner in the evening—not that it is by any means the rarity of a good dinner that causes those clerical orbs to kindle, for our parson is not only an aristocrat (being first cousin to Lord Ballicanny, the ex-Putron of the living), but also well clothed with this world's goods, both by property and by the defunct Church of Ireland, No; it is that famous old port laid down years and years ago by Jack's father, and over which the parson and

and shouts out an injunction to his old friend's son as to the color of the seal and the exact spot in the cellar to lay his hand upon the treasure. Well do I remember that courtly gentleman, Jack's father; as a lad I dinad with him on four different occasions, at the Adelphi Hotel, in Liverpool, in as many years. He took to drinking port instead of claret strangely enough in his old age, and accompanied the pergrinations of the bottle with a look that amounted in the case of guest almost to compulsion. I don't mean to say it was a fierce look. Not at all—kind-liness and hospitality beamed in his cyes—but there was something in that stately old gentleman's manner of starting the decanters on their round which seemed unable to comprehend even the idea of a half empty glass, and the rapidity with which those decanters circulated was to a modern stomach something too awful to contemplate. and shouts out an injunction to his old friend's son as to

template.

But here we are at our destination, a stone bridge—a famous meet of the thunder and turf hounds—and the old horse, once a hunter, pulls up of his own accord and pricks up his ears as if in quest of the gay cavaleade h has in former days so often upon this spot awaited the accorded to the second of approach of.

Before us the mountains swell gradually upward, col-

Before us the mountains swell gradually upward, col-orless, except for the bright green patches of grass that here and there dash their sides unid the waste of dead heather and ferns. Beneath us the river, in splendid fishing order, dashes against the buttresses of the bridge, its gravelly bed being just visible through three feet of clear amber water.

fishing order, dashes against the buttresses of the bridge, its gravelly bed being just visible through three feet of clear amber water.

Looking up stream a long, wide, level valley stretches—a valley one would expect to see traversed by a dult canal rather than a sparkling irout stream—and leaving Jack to begin at the bridge I walk a mile or so up the bank, so as to give myself plenty of water before coming on his leavings.

Fishing down stream was always a manin of Jack's, All Irish fishermen, I believe, do fish down stream, while Englishmen and Scotchmen hold the reverse as their creed, though they do not always follow it. With discolered water early in the season and open banks, I have not much choice, and feeling a trifle lazy gladby gave in to the national eustom on this occasion. The surroundings would in January, I must confess, have been somewhat dreary; more so in many warys than the most savage highland glens; more so than the drearriest of lowland moors of Weish mountains. The verdami flush of spring, however, softened to a great extent the

ies of lowland moors or Welsh mountains. The verdant flush of spring, however, softened to a great extent the harshness of those patches of rushes and stretches of long through whose wiry grasses even the April zephyls whistled. The yellow gorse, covered with gorgeous dress the broken and dilapidated fences, while the triumphant strains of the skylark counterneted the sad cries of the curlews that circled round our head. Civilization had invaded these solitudes at one time, but apparently had "gone West," not altogether, though, for here by the side of a solitary grove of Scotch firs is a son of Erin, with a long-handled shovel, throwing up a turf bank around one of the very "humblest cots" it has ever been my lot to see inhabited by man, and I have seen some tolerably humble ones among our mountains. If

around one of the very "humblest cots" it has ever been my lot to see inhabited by man, and I have seen some tolerably humble ones among our mountains. If Wordsworth had come across such a cot he would have written pages upon pages on it. If Mr. Parnell had been able to exhibit it to us this winter, he might have been a success as an agitator—who knows?

But I must stop this, as I am upon the property of one of Jack's cousms (which is a state of matters, however, apparently normal during my peregrinations in — County), and that worthy angler will justification on the property of the country of the property of the property of the country of the property of the country and that worthy angler will justificated in a state of matters, however, apparently normal during my peregrinations in — County), and that worthy angler will justificate on appealing to the bog-trotter, already immortationed, his astonishment at my ignorance of the whereabouts of such a famous domicile is so genuinely intense, that he has apparently only just presence of mind to jerk his thumb in the direction of a clump of woods, through which the outline of a large square house can be descried. The woods in question put a stop to the open character of the fishing, as on approaching I find the river enters or rather emerges from their shades. So having plonty of forest fishing at home, I feel inclined to make the most of the luxury of open water, and determine to make a start at this point. My readers will, I am afraid, think I have been a long time in getting under weigh, and that the beading of this paper is a fund and a deutsion. Still further delay is occasioned by having owing to a miscalculation of the supplies of my fly-book, to sit down on the bank and tie a cochy-bonda, a fly that, upon principle, has been my permanent leader upon every water and under every clime. While doing so, recollecowing to a miscalculation of the supplies of my fly-book, to sit down on the bank and tie a cochy-bonda, a ly that, upon principle, has been my permanent leader upon every water and under every clinic. While doing so, recollections of stories I had heard Jack tell about the particular cousin in question came into my head, and I remembered that he was a "Sunday man." This, gentle reader, does not imply that he has any particular veneration for the Sabbath day, as he has so much for the bailins, and had for twenty years held them in such constant awe, that the first day of the week was the only one on which the laws of Ireland rendered it safe for that unfortunate gentleman "to take his walks abroad." Judging from an English standpoint, on which model his establishment

had evidently been framed, there was at first sight a decided look of five-thousand-a-year about it; but if five hundred found its way into the mansion house coffers, his nearest relations did not know how it could get there, as the land had long been under creditors' management. This did not prevent two or three annual meets of the hounds on his lawn; and I have myself seen champagne flow like water on such occasions, and watched with inward wonderment the sons and daughters splendidly mounted, and fautlessly got up, leading the pursuing field, as the never-failing Roynard sped swiftly from the groves and shrubberies that surrounded the imprisoned paterfamilies. There is a way of working these things in the Emerald Isle, however, which we foreigners are mable to fully understand. I could, perhaps, throw a little light upon the subject; but fly-fishing, once more, is our theme, and not the domestic economy of Hibernian squires.

is our theme, and not the domestic economy of Hibernian squires.

As our flies make their first sweep in the air, and fall in that unsatisfactory and "kinky" manner that is always the case with a dry cast and a first throw, one of the welcome and oft recurring showers comes lightly pattering on the leaves of the trees, we have just turned our backs upon, and dimpling the surface of the swirling-pool before us. Responsive comes the flash of a yellow-belly, and the inexplicable tremor that, electric like, communicates uself to the rod's point, and he is fast dashing in every direction through the clear brown water. Another, and another find their way into the basket, now falling a prey to the cochy-bonda, and now succumbing before the equally fatal allurements of the woodcock and orange on the grouse-hackle. While upon the subject of flies, I must confess to being to a great extent a mocker—a state of opinion born rather of personal Woodcock and using both the globs-marks. Whe don't hos subject of flies, I must confess to being to a great extent a mocker—a state of opinion born rather of personal experience and observation than of theory. Being at one time an ardent fly-tier, and laboring under the delusion for many years that he who fished with hought flies was only half an angler, I was at last forced by the even run of success that season after season, with an increasing disregard for winged nature, attended the standard flies, that I gradually reduced my stock to a rather uncommonly diversified experience of every kind of water and every species, and every nationality of the trout family. A fact, which rather clinched my unbelief, was that my steps for two or three years followed frequently along the same river banks that were being, at that time, trodden by the late Mr. Stewart, whom I used occasionally to meet at those historic trysting places that are scattered along the banks of Tweed and her tributaries. That gentleman, continuously the most successful trout fisherman in Scotland, that land of piscators, was, as his book still testilies, a very complete scoffer. It was difficult to the standard of the stiller, a very complete scoffer. It was diffi-

That gentleman, continuously the most successful trout fisherman in Scotland, that land of piscators, was, as his book still testifies, a very complete scoffer. It was difficult to refute such evidence as that, though it was with something like a sigh that I saw my favorite sport shorn of its entymological mysteries, old fogyish though they were, trampled out successfully by the incontestable evidence of baskets filled to bursting from unpreserved and much-whipped streams, with that constancy that distinguishes the champion hisherman of the North Country in those days, even above the army of skillful fishers that this portion of the world produces.

Mr. Francis Francis, of the Field, the mightiest angler of Southern England, from his gently-flowing, willow-bordered Hampshire streams, shouted forth, I recollect, his defiance at these new heresies: but Mr. Stewart and his followers fished on, and slew their thousands of the wariest brook trout in the world, in the teeth of scientific indignation, with their black hackle and their woodcock all tied on that small hook that distinguishes Scottish flies above all others. Could, after that, a poor augler be expected to rush, waist deep, into the stream, and pursue, vainly, perhaps, every winged midge that came stilling past him, and spond precious minutes, when rout are rising, seated in a bed of rushes, and surrounded by a paraphernalia of dubbing and feathers, of silk and mohair, of hooks, and thread, and scissors, and pincers, and goodness knows what, endeavoring to make a feeble imitation of the insects whose place above the surface of the stream has in the meanwhile been supplied by some distant relatives of a decidedly superior flavor?

surface of the stream has in the meanwhile been supplied by some distant relatives of a decidedly superior flavor?

Have you ever seen, dear reader, one of those fore-fathers' ancestral, those hereditary, fly-books, that our ancestors, at any rate in the old country, contrived somehow or other to carry along the river bank? In the days of my youthful ardor, fired by constant contact with an elderly relative of the "old time" angling school with a desire to surround myself with the cumbrous appurtenances of a bygone age, and imbued with a contempt for the more concentrated conveniences of the modern fly-fisherman, I took the old gentleman's fly-book, which had ever been to me an object of admiration, and enlisted the services of all the ladies of the family in the manufacture of it, upon what I may call the Sir Humphrey Davy style. It was an awful book; the inside game pockets of a shooting jacket were completely filled by this bulky volume. For years, I am assumed to say, I hore this bundle to the river side. It was the admiration of all youthful aspirants. The young gentleman who had more money than brains—a would-bragortsman of the Cockney order—offered me twenty dollars for the old bundle of parchment in its red leather case, without the contents. It made immense impressions severy where, I can assume you.

Nothing could have been prettier than the variety of water offered by the I rish stream. The foaming cascade of hi her and sterner regions was not there, it is true; but rapid and pool, sparkling in the occasional sunbeams and ruffling in the western breeze, alternated with that exact proportion of each that the angler loves. For two miles no tree nor bush impeded the full backward weep of the line, and the foot trod incessantly on velvet turf.

As regards the trout, too, we were in luck, for the yountimed to rise, with little cessation, for three hours or

As regards the trout, too, we were in luck, for they As regards the trout, too, we were in luck, for they continued to rise, with little cossation, for three hours or more—tine, plump little fellows occasionally, but not often reaching half a pound; a triffe suntty in color in the higher waters, from their peaty character, but getting more silvery as we descend the stream, and more like our Allegheny trout, which is surparsed in gameness, appearance and flavor by the inhabitants of no rivers in the old country, and surpasses those of the majority that I have had experience of; and this latter—I mention it for the sake only of the comparison—has not been either cursory or occasional, but thorough and varied.

About one o'clock, just as the basket-strap begins to feel a little tight round the chest, Jack comes strolling up to meet me, as before settled, for luncheon, with his heavy Irish rod towering above him and his three ponderoils Irish flies streaming from his coat. We used to have a joke against him in old days about the weight of his tackle, wherein it was insimuated that he used to single out his fish as they were feeding near the surface, and steer them with his leader. Our baskets, oddly enough, contain exactly the same proportion of fish to one another as they used to do in former days, making a trifling allowance for Jack's knowledge of the water, which is as it should be, and seems a pleasant tribute to pleasant memories. We count out, if I recollect aright, seven dozen trout between us.

Why is it that in writing a sketch of a day's fishing, or of a day's shooting, too, for that matter, the sporting chronicler invariably pulls up, as if he had reached some longed-for half-way haven, at the everlasting, hackneyed, threadbare-worm midday smack? The English writer, whether in Europe, Africa or Asia, pauses to sing, as if it had never been sung before, the noonday delights of the invaluable flask of Kinahan, and moralizes a little before resuming his sport amid the fragrant clouds of Mr. Wills' Bristol bird's-eye.

His American cousin, though his menu is perhaps more varied, still finds it hard to get through without assuring the public that his inner man did not suffer in any way from want. As for myself I cry "peecavi" as loud as ever. My pen can no more help pausing at that eventful period of the day than can my appetite refrain from the basket of luxuries, which Jack's little groom emerges with from behind a neighboring wall—to my intense amazement, and shall we say also satisfaction. I say amazement, for Jack and I had always rather done the frugal on our sporting expeditions upon principle, and

amazement, for Jack and I had always rather done the frugal on our sporting expeditions upon principle, and I had supposed the boy had driven the carriage back and that Jack had a bite in his pocket for us both. However, for once in a way the cloth was spread, and beneath a thorn bush white with blossoms and amid the cries of the curlews and the screaning of the lapwings, the popping of corks resounded.

the curlews and the screaming of the lapwings, the popping of corks resounded.

What wonder, then, that after such good things fresh vigor attended our evening efforts. The wild moorland scenery was left behind, and our river carried us through scenes which, though peaceful enough, were more redo-leut of life than the barrens behind us. The trout continued to rise, and every dark pool and bright eddy yielded its tribute. We had to be less reckless now in the manipulation of our lines for tall trees. Willows, poplars, mountain ash and beech threw at intervals their lengthening shadows on the stream and on the meadows,

yielded its tribute. We had to be less reckless now in the manipulation of our lines for tall trees. Willows, poplars, mountain ash and beech threw at intervals their lengthening shadows on the stream and on the meadows, that grew greener and brighter in the light of evening. Here upon the bank, in a sheltered nook of woods, is aganekceper's cottage, picturesquo in its thatched roof and latticed windows. Here too a busy mill with its long deep pool full of big overgrown, not-to-be-tempted trout that the miller doubtless takes wholesale annually. Ruins there are, too, in plenty all through the country, from yonder ivy-covered tower that, four centuries ago, was the stronghold of some petty chief, in whose recesses the pigeons from generation to generation have reared their young, to the stependous remains of the famous Castle of Ballynagar, that crown the summit of a green hill hard by—immense and solid relies of an age that Irish history can scarcely throw light upon, and which played, doubtless, an important part in those din and distant days when the haughty Normans, under Fitzgrisebert and De Lacy, wrested from the kings of Leicester their savage kingdom.

But it is time to wind up both our reel and our story. We have a mile to walk to the bridge, where the boy is waiting with the trap, and six miles to drive home, and Jack is getting nervous about the parson, who, like many of those venerable caters and drinkers still extant, would have a fit if he were kept waiting ten minutes over the regular dimer hour. Both of us agree we have never known fish rise so constantly, without cessation, as on the present occasion, for though we started late and it is yet barely sundown, we count out thirteen dozen trout as the result of our joint efforts, which for a river that is poached at will in the dry summer months, and is reckoned only as a second rate stream at the best, is a very fair haul. Devout thankfulness is uppermost in our breast that we did not—as affireh had been our intention—send home the carriage, and tr

its rigid regularity, may not be so remunerative at first, but will pay in the end, if the public is honcetly dealt with, as seems to be the determination of the present Board of Managers.
We noticed several sporting characters on the train, as

We noticed several sporting characters on the train, as divers gun cases and heavy satchels gave ample evidence. Upon making a judicious houiry, we found two gentlemen, Messrs. J. S. Mundy and J. W. Phillipe, from Newark, were bound with us for "the Sportsmen's Retreat," or more familiarly called "Bill Lane's." Others got off at Moriches, Westhampton and Atlanticville—all noted places for good shooting. We found Johnny Lane with his vehicle at the station, and after a ride of twenty minutes were landed at the Retreat, and heartily velcomed by mine host. We found several sportsmen there, and had the satisfaction of learning the geese were moving, some twenty having been

Retreat, and heartily welcomed by mine host. We found several sportsmen there, and had the satisfaction of learning the geese were moving, some twenty having been killed the day before, and that the prospects were good. After a hasty ablution we were called in to supper, and such a supper! Who that has ever visited that celebrated spot does not hold in reverential memory Mrs. Lane's clam fritters? Were there ever anywhere slee such fritters? As plate after plate disappeared, and the cry was still for more, until nature cried aloud; and that coffee, and those roast ducks—not market ducks, but fresh killed from the bay, and roasted to—but hold! we can do the subject justice only at that ample board, and not on paper. The evening was pleasantly spent in the gunroom, telling shooting stories, loading shells, etc., preparatory to an early start on Monday.

Lane never goes out of a Sunday, both because he is a law-shiding man, and also because he says that the ducks and geese, as well as man, need a rest, and more satisfactory work is done from the lay over, hence Monday generally gives the best results of the week. A law is about being urged, and probably will be passed by the Supervisors of the county, allowing only three days in the week to gun ducks, say Monday, Wednesday and Friday. This if not applied to goose shooting would be a desirable thing, but including them, we think, as they fly only in certain weather, and do not stay, would be rather hard, and would not work.

to gin dicess, say autousy, wetnessay and rinary. Insi if not applied to goose shooting would be a desirable thing, but including them, we think, as they fly only in certain weather, and do not stay, would be rather hard, and would not work.

Upon retiring, your correspondent found coming over him one of his old attacks of rheumatism in his right foot. Were he an English nabob, or a generous liver, it might be called gout. It is very painful, and the long night of agony in that corner room of Lane's will not soon be forgotten. But morning came at last, and hobbling down to the lounge in the gun-room, he lay there all day swathing the swollen member with hot applications of soda in the devout hope of being able to get out on the following day; but alas, Monday morning found it not much better and he saw Bill and George, with Mundy, Phillips and Shepherd start with stools across the bay. It proved an excellent day for goosing. Before reaching the bogs, where were the boxes, a large flock of goese, some 500 in number, arose and flew back and forth, until some more flavored party to the west blazed away and sent them off. But others were coming in, and but a short time after the setting of the decoys, the guns could be distinctly heard telling us that the fun had commenced. Your correspondent having propped himself up before the window, with a good field glass could easily see the different flocks as they came in and approached the point where the shooters were concealed, and could see the white puffs of smoke and he sauden descent of the falling bodies, and as they struck and threw up the water in the bay, ah! what aggravation—what a situation for a sportsman—nursing a burning, throbbing foot, every movement of which was worse than ten toottaches, listening to thought abad word, just your support of the day is hooting, how as still determined. And the stories they told of this one's making that double shot, and of the long shot, one of Mundy's, with his 40-inch Long Ton, 100 yards as they all agreed. (About how a

an old country night has fallen before the lights aro sent twinkling from Jack's library windows, within which his anxious imagination paints the hungry parson restretlessly perambulating, with his eyes on the clock and his thoughts upon the soup. A shout at the lodge, a short spin over smooth gravel and through dark laurel shrubberies, and the light shines from the open door in oraces, and over the smooth lawn, and on the cascade that leaps down it, darkened only by the portly figure of that pillar of the church, who, as anticipated, is there to great which, it is needless to add, is speedily removed by the mellowing influences shortly brought to berr upon that kindly bon vicunt.

A DAY AT LANE'S.

SCIENTIFIC GOOSE SHOOTING.

WE took the ferryboat at Thirty-fourth street for Hunter's Point at 3.15—an earlier one at James' Slip would have done as well—on Saturday, the 21st ult, eatching the 3.30 train on the Long Island Railroad, for Good Ground and Shinnecock Bay. The train was off on time, and we were pleased to recognize the faces of two of the oldest conductors of the olden time, before elevated roads were known, and when to be a conductor was not to bury all the courtesies and instincts of the gentleman of the public. Its system of low fares and freights, with

come in sound of his honker and his companions they rarely fail to come down. It seems taking a mean advantage of the bipods. But Lane's decoys seem to understand it so well, they enter into the spirit of the whole thing so humanly, so to speak, that when a flock flics over they will call out vociferously, "Come down here." "Come dear ones and see us." "It is all right." And when the guns crack and their fellows do come down they rise up and cackle and shake themselves, and evidently laugh out "Ifa, ha! that's a good one." So well does Lane study his geese that when he takes out a new one and it acts badly or gives out a wrong note, he has been known at once to leave his box, go out and deliberately cut its throat, saying that that goose is not good; he would not only keep away the wild ones, but as "wil communications corrupt good manners," would ruin his whole school.

The next thing, and a very important part of a success-

whole school.

The next thing, and a very important part of a successful rig, is to have a good "swimmer" of geese. This is the man in the boat that goes off down the bay and around the flocks if there are any settled therein, and by judicious and careful sailing endeavors to drive them within sound of the voices of the stools. This requires at within sound of the voices of the stools. This requires at times great judgment and perseverance and a perfect knowledge of the points and bars of, the bay. It takes hours sometimes of careful maneuvering to get a flock in the right position for a big shot. If geese can be induced to swim up to a blind, a far better shot can be had than to have them fly over or settle among the decoys. One of the best "swimmers," if not the very best in the bay, is George Lane—as yet a boy, but with a man's head on his shoulders—as thorough water dog as all these bay men are. An instinctive talent to take in at once the emergencies of the occasion and a muscular activity to turn that knowledge to instant account, make him the equal among many who are good; and but a few more years of experience will help him to far outrank the best of them.

egual among many who are good; and but a few more years of experience will help him to far outrank the best of them.

Having set our decoys, settled ourselves in our respective boxes, feet toward the stools and guns cocked, we awaited events. George had started off eastward, where the geess sometimes feed when they come in at night. Soon Bill (who could hold his head higher than we were allowed to, his brown cap and florid round face looking, as some one remarked, "so much like a bunch of sand, that the birds couldn't tell the difference," whispered, "Here comes a bunch, keep low," and low we were. Our honker tuned up, and was answered down the bay; the flock joined in, the he-onk came back multiplied largely. Soon the rush of wings fell on our ears, all was still. "How is it?" "There are nine in all; but only about half of them right yet. Wait until they walk out clear of the stools. Don't shoot until they rise. Now give it to them." And as we arose, there was an astonished lot of geess—and how they did scrabble to get off! But those steel tubes were too much for them. Five out of the nine remained kicking in the water—two of them only being wing tipped. Then came a scene of excitement, and the high rubber-boots came in play, for a wingedgoose is not an easy bird to get, nor even to shoos, as they throw their heads and almost entire bodies underwater, and go off at no slow pace. The undersigned was not in raching condition, but Shepherd and Mundy each took after a goose, shooting as they ran through the water, and go off at no slow pace. The undersigned was not in raching condition, but Shepherd and Mundy each took after a goose, shooting as they ran through the water. Mundy soon got his; but "Shep," with his short legs, could not go so fast, and in his excitement run in over his thigh-boots and lost his bird after all—but fortunately George came up and shot the goose from the boat. It is not necessary for me to give the particulars of our different shots; how the undersigned, ourselves, made a becautiful doub

The wind came up sharp and cold, and, as no birds came with it, we eat our lunch—how good a lunch tastes out there on the bay, especially if you have had luck. Toward 4 c'elock a large flock, some forty or fifty, came in and settled on a bar about three-fourths of a mile east. George was soon around them and commenced driving. His tactics were admirable, and the way he managed that flock was superb. Not too near, nor too far; tack here, off there, and the flock in long line came slowly swimming toward us. A half hour passed. Still nearer; another quarter lour—they were doing splendidly; another quarter, and they would be within sight and hearing of our decoys.

"Steady! Keep down there! Don't show your nose even! Geese have tremendously sharp eyes. Keep cool!

steady! Keep down there! Don't show your nose even! Geose have tremendously share eyes. Keep coo! Oh, what a shot we'll have! We must get twenty this time. Aim at their heads if they are well bunched. You, Mundy, take the extreme right; you next, Phillips; Jacobstaff, you look out for the center; Shepherd and I will 'tend to our end." These were the orders of General Lane.

Another twenty minutes. "Where are they now? They ought to be pretty near here. What in thunder is the matter? They have stopped, and are going off eastward. Where is George?" George was gone—had left the geese, and could be dimly seen off Ram Pasture Point. "What has happened? How could he leave those geese when in such splendid shape. It must have been something very serious, or George never would have acted thusly."

thusly."

"Some d—d fool tipped over, I'll bet," grunted Lane, in great disgust. And so it proved. One of the inhabitants, returning home afters tarry at the hotel at Pon Quogue, loaded to the muzzle (we mean he was, not his boat), in und ortaking to round the point with no reef in his sail and in that wind, over he went, his mast rammed into the mud. Having crawled on top of the upturned boat, he was yelling like a loon, and, but for George's turning back, would have frozen to death, sure. Well, all praise should be given to George. A human life is of far more value than many geese, but the anathemas on poor whisky were loud and deep.

Of course, all this time, as the geese were in sight, we had to lie close, and I tell you it was cold work—no chance to stir or shake yourself; we shivered and growled. Having dug the mast out, and righted and sailed out the boat, an our was given the obtuscated in dividual, and he was told to paddle ashore. And George once more started for the geese, but the sun was only twenty minutes high. It was too late swim them. The only chance was to put them up, and they might come our way or might go to sea. Soon they arose. Oh, what a flock! "Some d-d fool tipped over, I'll bet," grunted

"Which way are they going?" "Can't tell 'yet."

"Here they come." "We'll have a shot yet." "Give tongue, old boy!" to the gander, and as he spoke out the reply came back, "Here they come: 1ay low."

There they go over our heads. Yo gods! how big they looked. All passed and lit on a bar to our left, two or three gunshots off. Too late to wait for them to come in to-night. There they sat, forty or more, cackling and pruning their feathers. No chance; what a shame! Blast that confounded fool that upset!

"But hold, here are four right in front of us. How are they, free from the stools?" Lane asks, as he could not see from his box. "Yes," we replied; "right out in the open." "Then it is our only chance; give it to them," and we arose and fired. Three ont of the four lay over, the fourth going off with a broken legt odie at sea probably, for he would not be able to rise again after having settled in the water.

the fourth going on what a viscous ably, for he would not be able to rise again after having settled in the water.

And thus ended our day at Lane's, having bagged twelve in all. We soon were homeward bound. Lane says the prospect for goose shooting was never as good as now, and he expects it will continue by until May. "So

mote it be."

Auong others whom we found at Lane's were Messrs. Albort Peltzer and Hermann Scheibler, two very intelligent Germans, from away in Crefeld, Rhenish Prussia. Having been in the country but a few weeks on business, and ere taking the Saturday's White Star steamer, they had taken a run down to Lane's (the FOREST AND STREAM giving the hint). They each, we were informed, own preserves at home, where they shoot the fierce, grunting wild boar, and have thousands of partridges, hares and such like; but this killing ducks out of a box, and the ducks zoing at the rate of seventy miles an bour, rather such like; but this killing ducks out of a box, and the ducks going at the rate of seventy miles an hour, rather took them. However, on Monday they had good sport, and, considering the circumstances, did well. They got some 150 shots. We will not say how many birds they bagged, but they were wonderfully pleased, as the chanpague corks on their return to the gun-room will testify. They proved themselves right good fellows, full of humor as well as enthusiasm. We hope to meet them again. In the party we had the pleasure of joining this time (and we have been down there many times and always found agreeable gentlemen, and have made some lasting friendships) we found in Messrs. Phillips, Mundy and Shepherd three as courteous gentlemen and good shots as one would want to lie beside in a shooting-box. All had their stories and reminiscences, and the days and evenings were short indeed that we spent with them. May we all meet at Lane's and have as good a time again (barring the gout), is the hearty wish of

Matural History.

DESCRIPTION OF A NEW SPECIES OF BIRD OF THE FAMILY TURDIDÆ FROM THE ISLAND OF DOMINICA, W. I.

BY GEO. N. LAWRENCE.

Margarops dominicensis.

Margarops herminieri, Lawr. nec. Lafr.—Proc. U. S. Nat. Mus. Vol. I., p. 52.

MALE.—The entire upper plumage is of a rich dark brown, the crown is darker and has the edges of the feathers of a lighter shade; tail and quill feathers of a darker brown than the back; axillars tail and quill feathers of a darker brown than the back; axillars and under whip-coverts white; the lores are blackish brown; the feathers back of the eyes and the ear-coverts have narrow shaft streaks of pale rufous; the feathers of the neck and upper part of the breast are of a warm dark brown, those of the chin and middle of the throat with light rufous centers; those of the lower part of the breast have also light rufous centers, but in addition each feather has a black terinfinity printing centers, but in month each realizer has a most formulal spot; on the lower part the breast, and on the sides the feathers have white centers, bordered strikingly with brown; the markings of the breast feathers are squammiform in shape; those of the sides, lanceolate; the abdomen is white, a few feathers on the upper part are very narrowly margined with brown; under tall-coverts, brown, terminating with white; outer feathers of thighs, brown, the inner, whitish; "irs, tea color," there is a naked space around the eye; bill, yellow, with the basal half of the upper mandible dusky; tarsi and toes pale yel-low. Length (fresh): 9 in.; wing, 5; tail, 3}; tarsus, 11; bill, from front, 15-16; from gap, 1½.

Type in U. S. National Museum, Washingt

Mr. Ober sent five specimens of this form from Dominica, all males, and closely resembling each other; it is probable, as in the allied species, that the females do not differ in plumage materially from the males.

Mr. Ober's collection from Dominica contained three species of Margarops, which I never had seen before; these were referred to known species, two of them I think correctly; but the one which is the subject of this article I now find was erroneously considered to be M. herminicri, Lafr. I supposed these species would be the same as those recorded from the neighboring islands, as they agreed well with the descriptions given of them, and there were no available specimens to compare with.

As soon as I had finished the examination of the birds of each island collected by Mr. Ober, they were placed in a box by themselves and not disturbed again except for an occasional comparison. The collection from Guadeloupe, containing specimens of the true M. herminieri, was not received until more than a year after that from Dominica. These specimens I labeled M, herminieri, Lafr., as a matter of course, they being from the locality of the type; the difference between the birds from the two islands was not observed at that time, as no comparison was made.

This winter, having occasion to review the species of Margarops, I got the specimens from the different islands together for the first time, and at once saw that the species from Dominica was quite distinct from the Gua-

deloupe bird. It differs from M. herminieri, Lafr., in being less in length, of a more robust form, the bill stouter and the tail shorter: the brown coloring throughout is much darker and of a ruddy cast, instead of olivaceous ; the centers of the feathers on the throat and upper part of the breast are much more rufous, and have black spots at their ends; the abdomen is pure white, whereas in *M. herminieri* the lower part of the breast and the abdomen are covered with lanceolate-shaped markings, which are very striking, each feather being white with a strongly-defined brown border; only a very small space on the lower part of the abdomen is white: M. hermin ieri has the white ends of the under tail-coverts edged narrowly with pale brown; in the new species they are white without borders, and it has the tarsi and toes stronger and paler in color than those of M. herminieri.

Amphioxus Lanceolatus.—In two valuable papers which appeared respectively in the January and February numbers of the American Naturalist, Mr. Henry J. Rice has given a very full account of his "Observations on the Habit, Structure and Development of the curious Lancelet" (Amphioxus lanceolatus), a creature about whose true position in the animal kingdom there has been and still is so much discussion. The author of these papers during the summer of 1878, while engaged in laboratory The author of these papers work at the Chesapeake Zoological Station, succeeded in obtaining two males, a ripe female and about twenty young of these species, and it is on this material that the present papers are based. Previous to this the young or Amphioans had not, we believe, been taken in America. The young remained alive for nearly two months, and thus gave the observer an opportunity of making a series of most interesting observations not only over their habits, but also on their growth and development.

Mr. Rice's most interesting account of the habits of both adult and young of Amphioxus is supplemented by a very full and valuable essay on its anatomical structure, to which we can here only allude. The paper as a whole is a valuable one, and throws light on a number of points hitherto in doubt.

White Blue Herons.—Dedham, March 14th.—Editor Forest and Stream:—Last year while in Florida I caught three young white cranes, just hatched, and was able to raise one of them. When I let him South last fall he was about eighteen inches high and finely feathered. He is now turning blue. Is it the "nature of the beast" to chauge color? Have often heard that they did, but thought it a hear. If you can give any information on the subject it will greatly oblige me.

C. W. RANTOUL, JR.

The bird, from what you tell us of it, is no doubt Ardea carulea, a species which is sometimes white and sometimes blue. Audubon, who had good opportunities for observing this species, regarded the white birds as young, and the blue ones as the adults. This species is often found curiously motttled in its change from the white to the blue plumage.

the blue plumage.

PILEATED WOODEKKER.—Springfield, Mass., March 20th.—Editor Forest and Stream:—I notice in your last number "J. J. B.", Ontario, Canada, asks about a bird, and I should judge it is the same kind I shot about three years ago. The man that stuffed it said he had stuffed birde over forty years, and never stuffed out one before. I am not much of an artist, but I inclose a sketch of mine; it is the exact size, for I taid my bird on the paper and marked around it with a pencil, and then put in the colors in water colors. I did it in about twenty minutes; but I hope it will give you an idea of what it is.

C. M. Stedden.

The inclosure mentioned by our correspondent, is an admirable sketch of a pileated woodpecker (Hylotomus pileatus), which we!presume was the bird referred to by

pileatus), which welpresume was the bird referred to by "J. J. B."

REULLA.—I have submitted specimens of this curious marine animal to a scientific friend in Boston, who gave it the above name, and stated that it belongs to the cords, family Pennatulidae, and is allied to the sea-pens and gorgonias. As this creature has some interesting peculiarities, which I have discovered by keeping them alive in a jar of sea water. I will usesribe it: It is found in muddy bottoms at very low tides; it is shaped like a leaf of the English violet, about two inches or more in diameter, anchored in the mud by a tube five or six inches long; the leaf is covered with innumerable minute tubercies, and is of a reddish-brown color. This leaf, for it exactly resembles one, and is called by the fishermen "the mud leaf," has a certain power of locomotion, and withdraws itself into the mud when irritated. I collected some of them, and placed them in a jar of sea water. In about half an hour, when they had become quiet, I was surprised to see protruding from these tubercles, tentacles like those of the Actinia, about an inch in length, and surmounted by a crown of waving white plumes. The animal became distended with water, and assumed a beautiful purple hue. At night, with the room darkened, the creature on being touched emitted brilliant flames of phosphorescent light, illuminating she whole jar of water. I kept them for two days, when, probably owing to a want of mud to burrow in, they died one by one. Perhaps with an aquarium, properly fitted up to meet their wants, they might be kept aire; and certainly it would be one of the most interesting inhabitants of the aquarium—beautiful by day, and brilliant flames of phosphoreseen tid described in American books, though "Nicholson's Manual of Zoology," my triend tells me, mentions a European species, Irmantula phosphorece, found in similar localities in England, which has this phosphorescent qualities.

Spring in Northern New York.—The last winter in Buffalo has been one of unprecedented mildness. In consequence of this curious subversion of the laws of nature, the movements of the migratory birds have been several weeks in advance of their ordinary dates of arrival. A killdeer was killed within the city limit on the 26th day of February, and a pintail duck was shot on the Niagara the following day. The latter species has never before been observed to remain here during the winter months, as happens occasionally in case of the bluebill and redhead, and must therefore be regarded as a fresh arrival. Robins, bluebirds and meadow lurks arrived on Feb. 25th, and fully two weeks ahead of the earliest comers on record during the past twenty-five years. A red-headed woodpecker was seen on the 27th of February, although this species has sometimes been known to remain the winter in this vicinity. The red-winged starling and crow-blackbird arrived a little later, during the first days in Mauch, and only about ten days ahead of the first comers during ordinary early springs. There are no signs of any Wilson's siphe, although some sanguine sportsmen have bearen along carefully over some of their favorite spring haunts. The vegetation is also keeping pace with this extraordinary development. The white maple men have besten along carefully over some of their favorite spring haunts. The vegetation is also keeping pare with this extraordinary development. The white maple shows here and there, whenever protected against cold winds, an occasional open blossom, and if the mild weather continues, it promises to be in full bloom on the 12th of March, or over three weeks ahead of last year. There is no ice anywhere on Lake Erie, and, in fact, nowhere as far as reported along the chain of the great lakes, the Straits of Mackinaw included, which have been known to be ice-locked as late as the 15th of May. Facts of this nature seem to militate against the theory of fixed narivals of our earlier migratory birds, although the latest, including the chimney-swallow, the night-hawk and the Baltimore oriole have thus far always made their appearance here within the close time of a few days.

CHAS. LINDEN.**

Buffalo, New York

n few days. Bugalo, New York.

Buydab, New York.

Signs of Spring.—Charles City, Ia., March 10th.—The weather has been variable and unpleasant for some weeks back. Several times spring was thought to have fairly opened, but as often the return of cold weather has put an end to our anticipations for the time being. The birds seem to be no better weather prophets than we featherless bipeds. As early as the 15th of February 1 saw a pair of robins in the woods, although I have never previously seen this species before the 1st of March. Since then I have seen only a single individual, which made its appearance on the 3d of March, uttered a few notes of greeting, or possibly of warning, although they were not so interpreted, and retired to the woods, if not to the "sunny South."

Wild grees (white fronts, I believe) passed over, northward bound, on the 25th of February, and ring-billed and buille-headed ducks cane into the river about the same time, but not in any considerable numbers.

None of the above, however, are considered such certain prognosticators of fair weather as the bluebird. This hardlest of the gaudy-plunnaged nigrants arrived on the morning of the 6th; not merely a single straggler, but five or six individuals were seen at different times during the forenoon, all at a considerable height, moving northward, and uttering their plaintive notes of welcome. The single small flock, just before dusk, flying toward the north. All this seemed to portend the near approach of spring, in the usually accepted sense of the word, but for once the birds themselves were duped by the brightness of the sun, for the weather ever since has been cold and wintry, and the harbingers of fair weather have failed to show themselves. show themselves.

to show themselves.

It was reported a week or two since that the mealow hark had arrived, but I think the shore lark has been mistaken for that bird. The latter species is quite common here, and resident, or nearly so. It is our earliest songster, being heard this year on bright days, even in January, and it nests earlier than any other bird with which I am acquainted, except, perhaps, the crow and one or two of our owls. Even now they are mating, as I saw two rival males pursuing a female in rapid zig-zag course through the air, some time since. I have known a pair of these larks to nest so early in the season that their young were destroyed by a storm of snow, which covered them to the

the air, some time since. I have known a pair of these larks to nest so early in the season that their young were destroyed by a storm of snow, which covered them to the depth of two or three inches. Some birds would have perished with their young rather than leave them, but in the present case only the numerous tracks on the snow above the nest gave evidence of the mother's solicitude. I have seen no snow-birds this spring. This bird hardly deserves its name, as it rarely remains here during the winter; arrives in the spring but little earlier than the bluebird and robin, and sometimes, although only in rure instances, stays with us throughout the summer. A bird much more deserving of the title is the tree sparrow—a species as fearless of cold as the little timouse himself. But I started to write of spring birds, and if I begin to discuss our winter visitants I shall not know when to stop.

From Hudson. Ohio, under date of March 1th.

From Hudson, Ohio, under date of March 14th, our correspondent 'M. C. R." sends us the following notes. We suggest that the occurrence of the bobolink at the date mentioned is certainly very remarkable, if quite

authentic:

Jan. 25th—Saw a robin to-day and two yesterday;
both days warm; no frost on the ground or ice in the

both days warm; no frost on the ground of acc more ponds.

Feb, 1st—Day cold; wind blowing hard all day; saw a number of downy woodpeckers, bluejays, tree sparrows and robins.
Feb, 15th—Saw a flock of wild geese to-day flying low from west to east; ground covered with snow, and weather cold.
Feb, 16th—I saw a number of Bohemian waxwings (Ampelis garratus) to-day in a flock of cedar birds; day cold and blowing hard.
Feb, 25th—I have seen a number of robins and bluerids to-day; saw two flocks of pigeons flying high; did not stop; heard a killdeer flying over to-night.
Feb, 26th—Saw two snall flocks of pigeons flying high this A.M.; two flocks of geese were seen flying from south to north to-day; one flock lit in a wheat field one-quarter

Feb. 20th—Site two finds of geese were seen thing room south to north to-day; one flock lik in a wheat field one-quarter mile east from town.
Feb. 27th—Six wa few purple grackles, a few crows and flock of pigeous to-day.

Feb. 28th—A flock of wild ducks was seen on Twin akes to-day; saw a killdeer to-day. March 1st—I saw a meadow lark to-day. March 2d—Saw a bobolink to-day [?].

March 1st—I saw a meadow lark to-day.
March 2d—Saw a bobolink to-day [7].
March 3d—Saw a redwing blackbird to-day.
March 5th—Saw some turtle dovesto-day.
March 5th—Saw some turtle dovesto-day.
March 6th—I saw a few ducks on Twin Lakes to-day,
but they were wild; saw a number of grackles, redwing
blackbirds, turtle doves and kildeer.
March 8th—A brant goose was shot on a small pond
to-day by a farmer near town.
March 10th—Saw a crane flying over to-day.
The pigeous have not stopped with us at all this spring,
but have been flying hard and high, though the woods
are full of mast. By referring to my notes of past years
I find pigeons thick in 1876, none in 1877, a few in 1878,
none in 1879, and none have stopped as yet in 1890.

none in 1879, and none have stopped as yet in 1890.

I have heard that a snipe or two have been seen, but have not found any as yet.

"Flint," writing from Warrenton, Va., dated March 18th, 1880, gives us these dates, which are interesting :-

Feb. 27th—First appearance of pewee.
March 2nd—Heard of Wilson snipe to-day; first of the

season. March 7th—House sparrow singing nesting song, although the ground is covered with snow.

March 17—Sun shone out first time in nine days; heavy fall of snow, succeeded by copious rains, generally at

might.

March 18th—Snow gone: little ice; fresh and bracing: three flocks of wild goese passed over this morning, pointing due north.

Sea and River Hishing. FISH IN SEASON IN APRIL.

GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory of In sensing reports for the Foliast And Fireday Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County: means of access; Hotel and other accommodations; Game and its Season; Fish and its season; Boats, Guides, etc.; Name of person to address.

"NEW DISCOVERIES IN NATURAL HISTORY."

"NEW DISCOVERIES IN NATURAL HISTORY."

Editor Forest and Stream."

The valuable "o'fishial" contribution of your correspondent, "Fish and Furs," in your paper of the 26th of February, toward "New Discoveries in Natural History," induces me to send you some further incidents toward that end. Knowing that your esteemed correspondent is thoroughly reliable, and being further convinced by the correborative testimony of his "o'fishious" man Coffin, I for one am disposed to give full cruelence to his discovery of the male Salmo salar hooking on to the caudal "narrative" of the beaver so as to ascend to waters into which the unassisted efforts of its own caudat appendage could not elevate it. Theoretically, however, I think "Fish and Furs" has mistaken an otter for a beaver. In the salmon rivers of Scotland there is known a combination of lish and furs that goes by the name of an "otter." This makes me think that perhaps it is in the rivers Spey, Dee, Tweed and Blackwater that we must look for Mr. Seth Green's scall yhybrids.

Leaving for the present the many new discoveries in natural history that "Fish and Furs" and myself are prepared at short notice to present to an astonished scientific world, I beg to bring to your notice a discovery that does not rest for corroboration on the testimony of any man called Coffin, but on the assertion of a real live baryonet, of George the IVth's creation, at present a clerk in the Public Nuisances Department, and therefore thoroughly reliable.

buronet, of George the IVth's creation, at present a clerk in the Public Nuisances bepartment, and therefore thoroughly reliable.

It was on the Danube, The time, the year 1879, which has so recently dritted into the abyss of the ages. Not "the beautiful blue Danube" of sorg, because the Danube at the locality to which I refer is as yellow as the Tiber or as Bass' XXX' "pel-lel." My baronet rriend was fishing for huro (query, sulmo?) with a Jock Scott and a brown hackle for a dropper. Above were the gaunt and gray ruins of a castle of the early Byzantine era, grin and weird in the Sclavonian moonlight. The silent-sailing white owl floated in and out of the ruined towers. Frogs, with their melancholy squawk, hymned to the evening star; and afar off in a copse of play ozone sang the nightingale.

At a certain bend of the bank a kind of a beaten track led up the steep from the river to the ruined vaults of the decaying stronghold. The angler of whom I speak was astonished to notice that this track was strewn with fish bones. Following it up to the heights be found it led to an excavation, den or cave under the old ruins. My friend the baronet (of George IV,'s creation) is a man at once brave and practical. Lighting his pocket lantern he peered into the hole. He has since assured me that the older that emanated therefrom was powerful—not even to be excelled by a kingfisher's nest. In fact, being not

the baronet (of George IV.'s creation) is a man at once brave and practical. Lighting his pocket lander he heered into the hole. He has since assured me that the door that emanated therefrom was powerful—not even to be excelled by a kingfisher's nest. In fact, being not only a baronet but a great trav-ler, he characterized the perfume as "a most fatal stink." but then you see from his position in the Public Nuisances he was a judge of his active and had been, aforctime, conversant with the five-and-forty smells of the city of Cologne. Cautiously advancing his lantern on the point of his fishing-rod as davancing his lantern on the point of his fishing-rod as far as he could into the cave, he there saw a huge mornister in the act of devouring a Hero dambidists. The creature, somewhat in the shape of a scalene triangle, bore a rough resemblance to a usea-horse [2-40 marinus] of most colossal dimensions, which appeared to have immense fluttring wings or vans on its shoulders, where the pectonal rays usually come in. The fact at one dawned on my friend that he saw before him one of the supposed-extinct Saurians—one of that kind that was alone the pectonal rays usually come in. The fact at one dawned on my friend that he saw before him one of the supposed-extinct Saurians—one of that kind that was slain in the pleasant legend of St. George and the Dragon, a representation of which forms the symbol of the most of use Canadians vainly spend our lives in trying to be decorated with. Overpowered by the magnitude of his "New Discovery in Natural History," my friend Sir Simeon Sillibub hurried down hill to the hostelric of the

village of St. Itchen, where the landlord and the boots and all the boatmen and pessants agreed with him that a Saurian had its noisome haunt in the vaults of the ruined castle of Blunderbuggsteiner. Can this be a surviving specimen of the Drago wantleyi? But that is a matter for Professor Baird.

The new field of scientific record opened by your talented correspondent. "Fish and Furs." presents a vast

The new nead of scientific record opened by your tar-ented correspondent, "Fish and Furs," presents a vast-area of research. The number of fish stories that might be subjected to analysis are really multitudinous, and a good deal might also be done in beaver and other tails. For what saith the oriental poet Saadi:

Fish and fur tales narrated by a traveler Require the Stream and Forest for unraveler. TIERCEL GENTLE.

"SALMON ROE" IN TROUBLE.

Editor Forest and Stream :-

JACKSONPORT, Ark., March 22d.

Editor Forest and Stream:— One of the first books placed in my youthful hands by an anx-lous teacher was "The Pursuit of Knowledge Under Difficulties." I remember nothing of that book but the title; that accurately expresses my predicament ever since. I have counted the fin rays expresses my prequentment ever since. Have confidence and analysis of a strange specimen hare-headed in the lot sun, and have burely succeeded in finding out how many there were of them, in time to eatch the hast glimpse of my hat as it sank to rise on more. I have tried the Bshing in a strange lake, to find my last book in the tough Jaws of a "grintle," cavorting around, with chances ninetynine to nothing in his favor. But now I am in the worst scrape Some time ago I ventured to inquire who John A. Grindle was

Some time ago I ventured to inquire who John A. Grindle was and what he had done that so scaly a fellow as the amic catta should bear his name. In an editorial comment you intimated that I was "up" in fish lore, and that my real object doubtless was to bestow a little invective upon the fish. In an unlucky moment I cenied the soft impeachment in writing over my own signature, and now you "get after" me in an editorial, in which you inform your readers that "Salmon Roo"—a name hitherto untarnished—is a lawyer, and not the unpretending angier he assumes to be—a wolf in sheep's clothing as it were. If this nearly took my breath away, imagine, if you can, my nortification when in the very prave offense! And that offense consists of having conmitted a very grave offense! And that offense consists of having conjectured that Mr. Grindle was a member of the legal profession, and thus placing myself under obligation to vinsists of having conjectured that Mr. Grindle was a member of the legal profession, and thus placing myself under obligation to vindleate him. For to quote our eact words: "Every lawyer owes \$\frac{1}{2}\$ to his profession to prove either that Mr. Grindle was.... an homorable man, or eise that ha did not belong to the har." That won't do for the lawyers. The utmost they can do is to "weed out." unworthy members when found out, and they are not always quite successful even in that. Why it is as much as thus small sprinkling of the "salt of the earth," the brether of the angle, can do to vindicate their entire membership. As well wight you say that, being an American, I must either prove that

that small sprinkling of the "sait of the earth," the bretared of the angle, can do to vindicate their entire membership. As well might you say that, being an American, I must either prove that Benedict Arnold was not a member of the Hevolutionary army, or give him a charactor. You have probably erred in this by ascribing to the profession of the law a code of ethies based upon the "higher law" of the editorial fraternity.

In all scriosaness, I did not conjecture that Mr. Grindle was a lawyer because I deem it a bad thing to be a lawyer, but from the fact that the mase of lawyer is always given to the this in connection with that of Grindle, and I have even heard the fish in connection with that of Grindle, and I have even heard the fish called "Lawyer Grindle" to his very teeth. It is very evident that this name was not bestowed by way of compliment to either fish or man, as in the case of Salme clarkfil for instance, or the more recent one of Lattzamus blackfordit; but, on the contrary, quite the reverse. Thus I deduce my conjectures he to the Character of the man—a reasonable and fair conjecture, based upon an impression that It will "take evidence to remove."

Now if I were only clear of the second count in your indictment, I could once again be happy and a quiet man. But I camou rest under the imputation of having played have with the rights of the say evergier States of Mississippi, Illinois and "possibly Indiana." Now, Mr. Editor, it is not necessarily any discredit to a

Now, Mr. Editor, it is not necessarily any discredit to a Imiana. Aoy, Mr. Edini, tris indirectors in any account of State that indifferent fish or had men have found a syluns or even had nativity within her borders. The reason upon which I base my enajecture as to locality is this: Mr. Grindle must have lived where the fish abounds, or It would not have been malurial steething. This fish is most pientifful in small lakes in low allurial steething. This fish is most pientifful in small lakes in low allurial steething. where the fish abounds, or it would not have been insmed after him. This fish is most plentiful in small lakes in low alluvial bottoms, such as those of Mississippl, this State, Louisiana, Illinois and a part of Indiana. Now had he lived in this State or Louisiana, or in any other locality where the fish is common except those named, I should have found it out in all probability. To not by way of opproprium, I assure you. That a very bad, greedy, grasping sort of a man might live in a locality is really no reproach to it, when you reflect that such a man would make very poor headway in a community, all or a majority of whom were of his own sort. So far, I think, my defense is "reasonable and just," and ought top revail. But I fear the worst is to come. I should not be astonished if in your very next number some gentleman were to call me to account for intimaling that Mr. Grindle was "possibly a politician." Then—woe's mel—some of Mr. Grindle's friends might want to know why! made the remark; what defense should I make or what reason could I give? This is the weak point in the whole business. I am sorry I said if.

SALMON (OR.

P. S.-Please keep up the inquiry till we find out who

—An English scientific journal relates that while the sailors of H. M. S. Faraday, added by the new system of electric illumination, were one night lowering a cable, they noticed an immense number of fishes of all sizes and shapes, gathering around the spot. By promptly throwing out nets they were enabled to make an extraordinary haul. The electric light may doubtless be employed to advantage by fishing boats.

Fish Culture.

JAMES WOOD MILNER.

BY BARNET PHILLIPS.

[A paper read before the American Fish Cultural Association.]

[A paper read before the American Fish Cultural Association.]

The sad duty devolves on me of announcing to you the death of Professor James W. Milner, who, at Waukegon, Ilh, on the last day of December, 1879, passed away from this world.

Many of you here must remember what interest Professor Milner took in our proceedings. Thoroughly grounded in all the scientific data, perfectly at home in the practical details of fish culture, there were no questions of an icthyological or ether character we could put to him, that he did not respond to at once, in a singularly terse and clear manner. He had the power of stripping the husk off of matter, and presenting you the perfect grain. This society owes a great deal of its prosperity to the labors of this man. Many of its plans, and especially the widening of its scope—the effort to make it more than local, to extend its influence, were suggested by Professor Milner. If ever any one had his whole soul in the work, it was that man, whom death has now taken away from annong us. His quick, nervous manner, his intensity, the power he possessed to make any question lucid, his easy method of explanation, we can hear no more. His place will be one, in this Association, not easily filled. Fully trusted by the Smithsonian Institution, he took charge of some of its most important missions, and there are here some present who can testify to the thoroughly conscientious manner in which his task was fulfilled. There are, in this world, many ways of doing one's duty. It was Mr. Milmer's ambition to leave no stone unturned that might be an obstacle in the way of scientific progress. You have often heard that saying, that "if war has its heroes, so has sentence its marty rs." The repetition of this has perhaps become trite, but its none the less true. It was as method in such an untimely way his days. Brinful of his work. I have seen anything cles; an excess of zeal which, early in Milner's life, as late in his career, shortened in such an untimely way his days. Brinful of his work. I

lia entitusticam, and quitie possibly the cold he had taken some time before was augmented by the chill dampness of a New England fail.

I can but briefly describe this useful life, Mr. Milner was born in Kingston, Ont., January 11th, 18tl, and came to Chicago when he was five years old. As a boy he was a hard student, and developed early in life a taste for natural history. He was but a lad when he traveled through Mimesota making collections. At the breaking out of the war he volunteered in an artillery company, and served with distinction to almost its close, having been noted for conspicuous courage and gallantry. After an honorable discharge, he obtained a position in the Chicago post oflice. Still retaining his love for natural history, he thoroughly filled his position, but, combining with it the study of his favorite topics, this double work became too much for him, and his health broke down. Retiring from his postal duties, he made explorations in the peat beds, and exhumed the skeletion of a moose, which he supposed belonged to an extinct species. Having written to the Smithsonian Institution in regard to it—describing the remains of this creature—the singular terseness and scientific instinct displayed in his letters attracted the attention of the Smithsonian Institution. This led to Mr. Milnor's services being engaged by the Smithsonian. He was first employed by Professor Baird, in 1872, to gather together the statistics of the fish of the Great Lakes. Shortly afterward he joined the United States Fish Commisson, in Washington, and was in their employ up to the day of his death. Successive publications of the Fish Commission, in Washington, and was in their employ up to the day of his death. Successive publications of the Fish Commission fully attest Mr. Milner's work and services. In addition to this, he was in close communication all the time with the present distinguished Secretary of the Smithsonian in collecting general statistics, and arranged the literary material for fish propagation in the

very methodical in everything, and as keeper of that portion of the archives under his charge was a notable example of industry, care and precision."

There is some information more than touching, which I have received, descriptive of Milner's last days. He was so enthusiastic in his work, that he went beyond his strength. He believed that with such a mission as was his, that he was invulnerable to the attacks of malaria or overwork, under which so many of his friends had succumbed.

When adviced by the second of t

hen advised by Professor Baird, in the summer of When advised by Professor Barrd, in the summer or 1878, to seek his home and take a needful rest, he still lingered at Washington, perfecting his plans for the steamer Fish Hawk, which he never was to see afloat—which vessel was the great triumph of American fish culture, and was only called into commission last month. Coming at last home to his wife, he refused to be thought even ill. In a month he was again at his post at Glou-Coming at last home to his wife, he refused to be thought even ill. In a month he was again at his post at Gloucester, entirely forgetful of himself; absorbed as he was in his work. When his task there was concluded he became so ill that he was forced to take to his bed. As soon as he could travel, he hurried on to Washington. Though confined to bis room, still, with untiring energy, he conducted the business of the shipment and planting of the California salmon into Michigan waters, by means of the telegraph. His cough continuing, his physician ordered him at once to Aiken, S. C. But finding he could do no work there, but slightly improved in health, he went to Western Florida. Mrs. Milner having met him in New Orleans, she informs me that any idea of rest was even then the furthest from his mind. Florida might do him good, but that was secondary to the fact that be was even then the furthest from his mind. Florida might do him good, but that was secondary to the fact that he might conduct some work in Florida—there were collections to be made there. Mr. Milner remained in Florida until May, but was no better. It was with a terrible struggle that he then gave up the hope of future usefulness. I cannot imagine any more dread conflict than that which is sometimes warm! between many more dread conflict than that which is sometimes warm! between a many solice. stuges on the series of the se

some are count not near to think that his work might stop with him forever.

A bare chance of life was possible. It might be found in Colorado. Thither he went last September; still he refused mental rest, for life was to him as worth nothing save enhanced by work. He rallied for a while, but then became more physicially feeble. The vitality in the man was immense. If he was too weak to write letters, he dictated them. When, in October, the doctors told him that his time was short, then his resignation was supreme. Even then he remembered many of his friends, members of this Association present here to-day, and wanted to send them his hast word and greeting. He said—these are his very words: "I am dying without a feeling of ill-will toward any man"; and could—(writes to me, Mis, Miner)—"could you have seen his loving kindness toward all who came under his notice, you could better understand the noble qualities, the untold goodness of this man."

of this man."

Let us then, respect the memory of James Wood Milner, who was not only of singular service to this world, but who was honest, sincere and endowed with many wonderful gifts. It is to the disinterested efforts of such a sterling man as was Professor Milner that we are beholden for the present position we enjoy, and though he be lost to us, I am hopeful that the memory of one of our leading officers will always be reverenced by the American Fish Cultural Association.

The Bonnel.

BREAKING DOGS WITH COLD LEAD

Editor Forest and Stream.—

Whitehall, Va., Feb. 23d.

Editor Forest and Stream.—

Through the kindness of your correspondent, "Ringwood," I have occasionally the pleasure of perusing your paper. In your issue of the 12th inst. I notice a letter signed "W. F. Steel," deprecating the use of "cold lead" in breaking wild dogs, and, in short, declaring it to be perfectly useless. I decidedly disagree with hun. My experience of dog-breaking extends over a period of twenty years, and during that time, it may easily be supposed. I have had some pretry wild ones, and I cannot call to mind but one instance in which a dose, or doses of shot, followed by a sound "hiding," have not loses of shot, followed by a sound "hiding," have not loses of shot, followed by a sound "hiding," have not lose effectual. That instance, by the by, was very effectual in its way, for the shot killed the dog, and perhaps, like the doctor's patient, he died cured. I do not mean to say that the shot gun should be part of the regular recognized tools of the dog-breaker—on the contrary, it should only be resorted to as a fordorn lone. At the same time, I repeat I have never known it to fail, if applied at the proper time, to effect at least a radical improvement. No doubt there are serious objections to it. Some might say it is cruel—though scarcely more so than a series of unmerciful whippings—then one is apt to injure and sometimes kill the dog; but after every other mode has been tried in vain, I would have no hesitation in using it, the more so as a dog which you cannot control is worthless. At this moment have a living monument to the good purpose to which a shot gun in dog-breaking can be put. Shortly before Christmas, "I), I came into possession of a setter dog which had never been broken, though he had been hunted a little by his former owner, who declared him quite unmanagable. He was a very fast dog, had a good nose, would stand steady enough to birds for say five minutes, but the moment the covey was flushed he was "all over creation," a

try him. Let me say here he was two and one-half years old. My first step was to get acquainted with him. My next to, in a general way, make him obedient—not an easy task—but he was not sulky, and came, in to hand nextly well. Then I took him out hunting without any gun, but with a steady dog of my own. Well, it was the same old thing. He flushed every covey of birds he found. Then he would not "back stand," and disgusted my setter, "Alb," by taking his point and flushing his birds. Then, worse than all, though quite obedient at home, returning when called (he was always very attentive to the whistle), and ever "down charging." He paid not the slightest attention to whistling, calling, or even stronger knoquage, I regret to say. I beat him unmeritally as soon as I could catch him, and tried again. Presently Alb, found a rabbit in a bust, I called Porter, who came with perfect obedience, there being no birds on the wing. He made a faint attempt to "back stand," rushed past. Alb to put up the birds and was exceedingly disappointed—there weren't any, and, in fact, looked very foolish, Just then Mrs. Rabbit, who did not understand this fooling, bolted, and so did Porter, notwithstanding he had just "received a tremendous beating for that same thing, and that I did ny thoust to restrain him, even to throwing stones at him. This satisfied me there was no resort left but the shot gun. Two or three days after the occasion just referred to I took him out again, his time by himself—I, armed with my choke-bore. We soon found birds. Bysbouting to him and running as fast as I could, I got within anout gain, this time by himself—I, armed with my choke-bore. We soon found birds. Bysbouting to him and running as fast as I could, I got within anow it has been been also been been done and we went out for a short time, taking the dogs. Porter hunted first rate, but flushed the first covey he found, which was also the first we found. Fortunately I was not far off, and "ha I you Porter, hie back sir," stopped him in time. He came b and made much of him. From that moment he was a conquered dog. Of course he was no little trouble afterward, and I was more than once on the point of giving him another dose, but happily refrained. Now he is the fastest, steadiest dog I have owned for many a day. This is only one in-tance of many wherein "cold lead" has done good service.

SAPIENS QUI ASSIDUUS.

"CLASSIFICATION OF THE COLLER AT THE NEW YORK SHOW.—Jersey City, N. J., March 18th.—I wish to call the attention of the Westminster Kennel Club to the injustice done the breeders of the Scotch collie in classifying the dog and blitch of that breed together at the Fourth Annual Bonois Show. Heretofore it has been customary to class them separately. There has been a great interest taken in the collie since the last bench show, and a number have been imported especially to exhibit at this coming bench show. I do not see why the kennel chus should make any distinction in the classification of non-sporting dogs, as none are more useful than the collie. Appletons: "American Cyclopædia" states as follows: "At the head of the list of the domestic canines of temperate Europe stands the shepherd's dog, having been trained from tine immenorial to the care of flocks; its peculiar faculties seem to be instinctive, and its sugacity, fidelity and courage are not excelled by any species of dog." I think for the above reasons the collie should at least have a chance, similar to other non-sporting dogs, and I ask the kennel club to make two classes instead of only the one, for if they are exhibited separately I know of at least five bitches in this State that will be entered. I think it is the duty of the kennel club to do all in its power to encourage and promote the breeding of such valuable dogs. Look at the English Bench Show and see the great number of collie dogs that are exhibited; in fact, they are taking the lead over all other breeds. By opening a class for bitches separate form the dogs the kennel club in insure a larger number of entries and finer specimens of this breed than has been heretofore exhibited in fais.

As regards classification, the points of the male and country.

As regards classification, the points of the male and female collie are so much the same that no injustice is done the bitches as far as the judging is concerned. question, therefore, is only one of prizes, and in making up the premium list the committee were governed to a great extent by the entries in various classes in previous years. However, we observe that a special club medal has been offered for the best collie bitch, providing a bitch does not win first prize, which makes five prizes in all for this breed,

ENTRIES FOR THE DERBY,—New York, Murch 23d.—Be kind enough to publish in your paper the following entries for the Field Trial Derby: Lad Lincohr-Daisy Dean), white and orange setter dog; Dashing Plover (Dash II.-Phantom), white and black setter bitch; Bino Queen (Tam O'Shanter-La Prince), blue Belton setter bitch; Bue Princess (Tam O'Shanter-La Frince), blto Belton setter bitch; Luc white and orange setter d'em-Nora), black and who (Dash II.-Norm), blue Bentered by the Monty

MASSACHUSETTS KENNEL CLUE.—This organization was incorporated Dec. 12th, 1877, at Boston. The following are the names and addresses of its officers for the present year: President, J. Fottler, Jr., Esq., 26 South Market street; Vice-Presidents, F. B. Greenough, M. D., and J. F. Curtis, Esq.; Treasurer, T. T. Sawyer, Jr., Esq., 7 Exchange Place; Secretary, Edward J. Forster, M. D., 28 Mosnyant Source. Marke, and J. 22 Monument Square.

New York Dog Show.—A special prize of a gold-neck chain, manufactured by Tiffany & Co., valued at \$50, has been offered by H. W. Livingston, Esq., No. 133 West Forty-second street, for the best pointer or setter (dog or bitch) of any strain owned and exhibited by a lady. No entry fee for special prizes.

Forty-second street, for the best pointer or settler (top or bitch) of any stram owned and exhibited by a lady. No entry fee for special prizes.

Salt for Distemper.—Indianapolis, Ind., March 23d. In your issue of June 30th, 1878, you published, with editorial comments thereon, a letter from a gentleman in India to a friend in Ireland, giving the former's experience in using salt as a cure for distemper in dogs. I have been a close reader of your excellent paper for years, but overlooked this at the time of its publication, or I should have added my testimony before this. Permit me to say to the numerous readers of the FOREST AND STREAM that common table salt is almost an unfailing remedy for this so-called terrible disease. I say "almost," in order to be on the safe side, as it might fail, although I never knew it to do so, and I have used it numerous times, and know many other gentlemen whose experience has been the same as mine. I have never used Epsom salts in connection with the common salt, and doubt the advisability of so doing. My mode of administering the dose has been to make a bolus about as large as a walnut, composed of beef suct and salt. This is easier for the dog to swallow than clear salt, and does not cause a burning and painful sensation in the throat cause a burning and painful sensation in the throat cause a burning and painful sensation in the throat and stomach. Three doses I have found sufficient to effect a curre of distemper in any stage. This simple and effective remedy will not find favor with that class of men who base their claims to superior knowledge of the dog on the knowing manner in which they dose him with drugs, regardless of the dictates of common sense and good judgement. Neither will it be adopted by that other class, including good men like "Citizen Von Cuila," whose writings on distemper would "shingle a meeting-house." But to those gentlemen of simple habits, who are satisfied with a good thing when they find it, regardless of whether it is backed by the opinions of sc

—The Sporting Dog and Field Trial Club (Limited) has sold within the last fortnight a pointer dog to Hungary, £50: a pointer bitch to Scotland, £25: a fox terrier in England, £30, and a brace of Gordon setters to America for £225—in all £350 for five dogs, being an average of

ONE WAY TO CURE THE MANGE.—Couldersport, Pa., March 23d.—I will give you a recipe for the mange, although it may not be new to you. Our tannery man has a very fine Newfoundland dog, and, when he was seven months old he had. I think, the worst case of mange I ever saw. He tried several prescriptions, but the dog kept growing worse, and finally, as a last resort, he commenced bathing him in the tan-vat, every day. In a very short time he was completely cured; since then he has cured three cases.

We cannot recommend this treatment as a greatification.

We cannot recommend this treatment as a specific remedy, no matter how successful the cures may have been as above described-

"A FLEA IN IIIS EAR."—Munfordville, Ky., March 24th.
—I notice that correspondents often write to you asking what they must do for their dogs which are constantly shaking their heads and flapping their ears. Frequently you answer, saying, that they have canker, and giving them a prescription. Now while they may have a sore in the head, sometimes a flea may have crawled into the dog's ear and may be crawling around. I have relieved my dogs instantly by washing out the ear with a little warm soap-suds, which brings out the flea. HART.

Fan-Mr. Garrett Roach, of this city, claims the name of Yar for white pointer dog out of his Queen II., by Sensation.

Ray and Rip Van Winkle .- Mr. Henry Pape, of Hoboken, N. J. lay and 14p 14n 11mac.—Mr. Henry Fape, of Nobokel, A.S.-chims the names of Ray and Rip Van Winkle for a pair of red Irish setter pupples, whelped Sept. 7th, 1879, and purchased from Mr. Max Wenzel, of Hoboken, N. J. They are by Lincoln & Hellyar's Arlington, out of Mr. Wenzel's Doe.

Lilly—Mr. J. H. Bauman, Tappahanuock, Va., claims the name f Lilly for pure Laverack setter bitch pup, out of Princes Nellie, by Carlowitz,

WHELPS.—Zanka—Mr. W. H. Gotting's (of this city) daschunde bitch whelped on March 1st six pupples, by Mr. William Scheely's Dan.

Arghern.

THE AIM AND VALUE OF THE NATIONAL ASSOCIATION.

HE most important event in the annals of American archery E most important event in the annaisor American arriery for the season of 1880 will be the meeting of the National tery Association, at Buffalo, N. Y., on the 13th, 14th and 15th of July. For some unexplained reason, the idea has predays of July. ed among Eastern societies that the National Association valid among Eastern societies that the National Association was to be a Western organization, and managed in the interest of Western clubs. Perhaps such a supposition may have arisen from the fact that the first great meeting was held at Chicago, and the Executive Committee was, for the season of 187a, composed mostly of Chicago archers. The reason why the first meeting was held at Chicago, was simply from the fact that that city the composition of the committee was the committee of the committ offered greater inducements than any other, and necessarily the outere greater inducement's tunnary outer, and industry state Executive Committee must be largely composed of archers who reside at the city where the meeting is to be held. When Buffalo was chosen as the place for the meeting of 1880, a majority of the members of the Executive Committee were chosen from Buffalo toxophilites. No one can know how necessary this is who has tracophilites. No one can know how necessary this is who has not borne a part of the burdens of the arrangement of such a meeting. The aim, the only aim, of the National Association is to build up archery into one great, innocent, healthful and exhibiterating pastime of America, wherein cultured and refined ladies and gentlemen may combine pleasmatassociation with that honest omulation wherein archery has no rival. The founders of honest emulation wherein archery has no rival. The founders of the Association have done much good work, and by the ceaseless

the Association have done much good work, and by the conseless labor given to the cause have built up the Association into a powerful and compact society. No pastime can ever be firmly fixed and successfully practiced in any land until the societies unite themselves in such a central general organization.

Archery "flourished," according to all writers, throughout Great Britialn from 1765 to 1844, every county having powerful clubs—one uniformed and drilled society having eight hundred members. During that time they had no National Association, and Hausard tells us with pride of that "incomparable bowman' Anderson, who actually once succeeded in getting a score of 31 bits, 135 score, with 75 shots, at 100 yards! He further tells us that at a match shot between three of the best clubs in England one archer succeeded in getting receding the founding of Sourchers stond for those fifty years preceding the founding of archer succeeded in getting 70 lits out of 20 shots, at 100 yards; So archery stood for those fitty years preceding the founding of the Grand National Archery Society in the year1844. Within ten years after its inaugural meeting there were three hundred gentlemen in England who would easily have beaten the "incom-parable bowman" with a ten per cent, discount. Archery at once parable bowman." With a ten per cent, obscure. Afteney at once began to be practiced upon correct principles. It was studied scientifically. Ladies joined in the matchless sport, and while at the first meeting there was no lady competitor, yet in the year 1860 there were minety-nine Dianas contesting for the national medal at Bath, and since that date about the same number have annually paid ten dollars for the pleasure of competing with their rivals drawn together from the four quarters of the kingdom. rivals drawn together from the four quarters of the kingdom, Even forty-four brave-hearted ladies faced the tempest that raged throughout the two days of the meeting on Doncaster Moor in 1877. While in 1819 Mrs. Calvert won the lady champion's medal with a score of 161 at the Double National Round of 96 arrows at 00 yards and 48 arrows at 50 yards, yet in 1873 Mrs. Horniblow curried off the same cublem at the same round with a score of

carried off the same emblem at the same round with a score of 761. While a score equal to 42 points won the gentleman's medal at the first meeting, yet in the year 1857 Horace A. Ford bore of the trophy with a score of 1.251.

Mr. Ford truthfully says that this amazing advance in archery was due to the formation of the National Archery Society. Not only was this advance noticeable in a few archers, but the mass of shooters so greatly improved that in the year 1857 the average of the twenty beats erores at the national meeting was 64, or fifty points higher than the score of our champion at Chicago, and 182 points higher than the score of the first English champion. Such a result could never have been approached by the desultory practice of archery by societies without the guiding hand and tempting prizes of the National Association. So deeply bas the love of

tice of archery by societies without the guiding hand and templing prizes of the National Association. So deeply basthe love of the annual meetings of the National Association grown in Great Britain, that it is one great event in the history of each season although three other great gatherings of archers occur each year—at Leamington, at the Grystal Palace and at Teigmmouth. In America the founders of the National Association have freely expended their time and money to make the pastime a facture in the hearts of the American people. They desire that every society, regardless of its locality, its number of members, or the degree of skill they may possess, shall be enrolled in the ranks of the National Association. The cost of admission—\$10 for each club—is very small, and for the first year the ree is no other cost. After the first year the only cost is the annual dues of \$1 from each male member of the club. If a society does not expect to be

present at any of the national meetings it should have sufficient interest in the general upbuilding of the gentle pastime in our land to give so much support to the organization which is struggling to bring archery to the measure of success in this country, ging to bring archery to the heaster of success in his country, to which its merits entitle it. There are, however, very few societies in which there is not some members who are ambitious to join the great host of skilled archers who naturally gravitate to the annual meetings of the National Association, and for the sake join the great host of skilled archers who naturally gravitate to the annual meetings of the National Association, and for the sake of these members the society ought to attach itself. It cannot surely be the cause of any society remaining out, because of the mere pittance of cost, and one cannot well conceive any real objection that could be urged against a general coalition of all the societies in the United States. No doubt such a result will be reached in future years, but it seems certainly desirable that the day may be as soon as possible. I have heard many objections urged, and have received hundreds of letters from archers outside of the accordance in which chievings were under to make the residence of the state of the same processing in which chievings were under to make the residence of the same process. day may be as soon as possible. I have heard many objections urged, and have received hundreds of letters from archers outside of the association in which objections were made to many features of the national meetings and the plan of conducting the association, but none of the objections urged were based upon anything more than some mere technicality or some peculiar theory of the writer or speaker, and I have yet to hear an objection from a lady. Let me beg of the lady archers throughout the country that they use their potent influence to bring their several societies into the National Association. The Eastern Archery Association, the Pacific Coast Association and the several State associations are in the right direction. They will do wonders toward building up the pastines, and if they will crown their labors with the addition of their several societies to the roll of the National Association, they can rest assured of the hasting memory and gratitude of the archers of coming years. They should preserve their own organization and annually held their great meetings, as the English associations have done at Leaning-ton, Telgamouth and the Crystal Palace; but once in every year they should meet at the great "gathering of the clans" and contest for the highest honors that archery can give.

If the writer has one unselled feeling it is that the greatest.

they should meet at the great "gathering of the clinis" and contest for the highest shonors that archery can give.

If the writer has one unselfsh feeling it is that the greatest good may come to the greatest number of our whilely scattered archers, and to that end he has given more time and money than he would care to mention here, and if he now knew of any handgues strong chough to impress deeply upon the mind of every archer the duty of assisting those who are working heedfully in the cause of archery, his assistance and support, by urging his society to at once join the National Association, the writer would be glad indeed to speak it. Feeling so deeply and carnestly upon the subject, he can only say to archers generally that the welfare of the cause depends more upon such a general attraction to the central organization than upon all other questions agitated in archery councils. Before the list of May every society in the country should attach itself to the National Association, and have at least one representative at the Buffalo meeting.

WILL II, Thompson.

WILL II. TROMPSON.

New York vs. North Side.—According to a notice in our last issue, a team of this club shota match with the North Side Archery Club, of Chicago, at their hall, last Saturday evening, March Zith. Nowlinkstamding the state of the weather quite a number of visitors, besides a full attendance of the club mombers, were on hand, and enjoyed watching the team as they shot. As archery is a sport that needs almost undivided attention upon the part of those shooting, besides its being necessary that one should feel perfectly well, or otherwise must run the risk of making low scores, we regret the indisposition of both Mrs. Dr. De Luna and Mr. Sutton—the former; generally making the highest scores among feel perfectly well, or otherwise must run in ersk of manual low scores, we report the indisposition of both Mrs. Dr. De Luna and Mr. Sutton—the former, generally making the highest scores among the ladies, feeling so hadly as to almost determine to stop shoot-ing at the last round. While not making any excuses for the shooting, it seems as though, to test two teams, the conditions of light, etc., should be equal. The light Saturday evening seemed to play the New York team false.

The following are the scores of the New York team; distance,

30 yards; 90 arrows:-

BROOKLYN.-An interesting private match was indulged in by

HOYL. 40 265 190 190 588
Mr. Pearsall being the victor by 10 points. Capt. Hoyt made
three golds in succession at two ends. That is right—keep up the
practice at short range until you can got out to the long ranges in

the Park.

MULTNOMAH ARCHERY CLUB.—Portland, Oregon, March 18th. MULTENMAH ARCHERY CLUB.—Portland, Oregon, March 18th.—The love for archery has reached this far-distant land, and there are those here who will some day claim at least an bonorable mention in the columns of your paper among American archers. We take the liborty to ask of you a mention of our club and of the best score of one of its members in your valuable paper. Our club was formed late hast fall with twelve members, under the name of the "Multinounah Archery Club." Ou March 2d. Dr. Henry, shooting these rounds of 39 arrows at 40 yards, made in the first round, 182; second round, 182; and in the third round 208. Total, 372. His average for the last five days, shooting 21 rounds, 24 arrows, each at 60 yards, has been 61 3-7 to the round J, R.S.

ILLINGIS—Highland Park, March 22d.—Our archers here are improving daily. O. W. Kyle, Esq., is gaining day by day, and will roll up a good average this month. Wish I could say the same Skokke.

Cricket.

MACHINE-MADE BOWLERS, WICKET KEEPERS AND LONG-STOPS MAGHINE-MADE BOWLERS, WICKEY KEEPERS AND LONG-STOPS.—
A new invention has recently been produced in England by a Mr.
Jeffery. It is yeleped the "Eag." It has been interviewed by
Alfred Shaw, who is "of the opinion that it will be invaluable to
cricket," and the specialities of the machine are stated to be as
follows: 1. It will return balls to bowler. 2. It will pick up and
return shooters. 3. A bowler can practice during winter and keep
his form secret. 4. A batsman can practice without the inconvenience of going back to the net to return balls. 5. It will be inexpensive. 6. On wheels it can be moved. 7. A box can be made
numberment by story cricket zoods. 8. Though he ball may hit the venience of going back to the net to return bails. In this of merpensive. 6. On wheels it can be moved. 7. Abox can be made underneath to store cricket goods. 8. Though a bail may hit the stump "dead on," it will be returned. 9. The village curpenter can make it. 10. Another game for the playground of a school. Thus this automaton wicket-keeper and long-stop has been putfed into notice, but. like the famous chees players of the tall-ented Mikkel, it is evidently to be worked off on the public by a

Years ago-it must have been fifty-Mr. Felix sugplayer inside. gested the application of the Roman catapult to the purposes of gested the application of the Roman cataput to the purposes of propelling the cricket ball, and Caldecourt, several years later, simplified the machine. Again, a newly invented cataput has been rigged up on the turf, the inventors and patentees being J. Wieden & Co. This is alauned to be "the most effective substi 3. Wisen & Co. This's claimed to be "the most energy substi-tute for the professional bowler." At the time of the debut of this automaton many differences of opinion arose respective the real merits of the instrument as a bowling substitute. The author of "The Cricket Field" waxed sarcasite over it, and the "profa" of the day went about scretching their heads with fewer half growns the day went about serkiching their heads with lewer half crowns to fingle in their pockets, and wearing an unusually thirsty look. The press of the time then came to their rescue, and from the two following extracts the reader was supposed to be able to draw an opinion for himself: "The catapulta is accredited to draw an opinion for himself: "The catapulta is accredited to Mr. Felix, who, according to his own showing, borrowed the idea from the resources of the belenguered Archinedes and irresistible Marcellus for the more friendly encounter of the cricket field, diverting the attacks from which 'tower and temple went to the ground,' to the more humble task of lowering obstinate. wickels. Though not quite as good practice as a first-rate howler because a ball does not certainly come from it in quite the same manner as it does from the hand, still it is not without some advantages over the services of a good hired bowler. It never tires vantages over the services or a good hrea constr. The over the signerer il, and it can adapt its pace without spoiling its pitch.' Another writer, in the Sporting Magazine, 1838, says: "I alluld to the catapulta, a convenient instrument, which will make any man with eyes in his head a bowler. Let them have a railroad for the ball to run upon, and the thing is complete. As to the faver-tion, I doubt not the incennity, but I sincerely hope it will never supersede nature's catapulta—a free shoulder, with its proper ap pendages, a strong arm and a steady hand;" and right well he might have added, a supple wrist and a sufficiency of brains.

Lastly we come to the machine-made long-stop, in whose meshes the long tally of byes finds its source; we refer to the stopping-net. Whence this came, and when it was first introduced on the oricket field, it matters little, but it has been an importation, in our opinion, that has done great harm to American cricket. Fortunately it is the only one of the three labor-saying machines which we have recapitulated that has taken out its naturalization papers, and one is certainly enough. Good bowlers, good wicket-keepers and good long-stops are not such a drug in the American market that we can afford to let machines take part in our practice. If we are to fight our way up in the cricket world we must leave these lim-cracks and innovations alone.

CRICKET AT PORT HOPE IN 1846.—The game was firmly established at Port Hope, Canada, over thirty-five years ago, and we have records of their club playing against Cobourg in the above-named year. It would really be a pity if one of the oldest ordering anizations in the Dominiou should be disbanded on the eve of a prosperous senson.

American Cricket.—New Fork, March 27th.—it is characteristic of Americans that they are always sighing for "something new," as something different from any other nation, consequently it is not surprising that they want a new game of cricket, or rather American cricket, with American rules; and hence we see the Cricketers' Association and hear of the "average system" and "revolverism" both quite unknown or unheard of in any other country where cricket is played. These advanced ideas may be good enough for some, but are they acceptable to the majority: Do they promote the noble game? This is a very important question, and should be well considered by all cricketers, now that cricket seems to be going ahead in this country; therefore let American cricketers decide whether cricket is likely to advance more rapidly with the new ideas or the old.

G.

THE AUSTRALIAR ELEVEN.—A Melbourne correspondent informs us that the Australian icam for England and America is nearly complete. They made a start on New Year's Day, and are about to play a strong fitteen of Sydney. The list is as follows: Spofforth, Bonner, C. Bannerman and Murdoch from New South Wales, and Alexander. Blackbam, Beyle, P. M. Donnell, Palmer and Slight from Victoria. The two extra men will probably be A. Bannerman and Evans or Kendall. Bonner is said to be the hardest and cleanest hitter ever seen in Australia. He stands six feet six inches; can run like a deer, bowl like a catapult, but with plenty of break, and throw a cricke ball 131 gards the first try—altogether rather a "nai-r." They have had some weather out there, too, one day cold enough for overcoats and two days afterwards 106 in the shade and 148 in the sun. In South Australia it wont as high as 175 in the sun.—Fondon Sportsman.

—Mr. Chas. W. Bance, of the Staten Island and St. George's clubs. of this city, who has been spending Easter in Hamilton Ont., was hospitably entertained by Alderman R. Kennedy, of that city, the jovial Captain of the Hamilton Cricket Club, whe visited New York and Philadelphia last summer. Captain Kennedy is in hopes the St. George's, Young America and Stater Island teams will visib Hamilton this season and promises thems 'gay old time,' both on and off the field, and will then pay thom another visit next season.

The Critoretees' Association of the United States.—Philadelphia, 903 Walnut street.—The third annual meeting of the association will be held at 903 Walnut street, April 9th, at 4 P.M. Delegates must present credentials properly certified, each club being entitled to one vote.

John P. Green, Sec'y and Treas,

—The Germantown Cricket Club is to be governed somewhat differently in the future, and expects a large increase of monbership this year.

-The Manhattan Cricket Club will have a strong eleven in the field this season. It has several new members that can play.

—The Hargreave brothers, so long identified with the Germantown Club as its bone and sinew, have joined the Girard Club, of Philadelphia, which is composed mostly of Englishmen, and they will make it a match for any organization in the country.

-We call attention to an article on "American Cricketers an Foreign Trip" in another column.

-George Lane, professional Staten Island Cricket Club, has engaged passage from Liverpool, England, 15th inst.

-Now that it is positively known that the Philadelphia boys are not "going foreign countries for to see," the Hamiltonians will have to look out, for Captain George will surely be after them.

—The Australian eleven, which is to visit England early in May will, it is expected, return home via Now York, Philadelphia and San Francisco.

-Secretaries of clubs are requested to send in their full addresses at an early date.

—Mr. James Byre, of the Staton Island Cricket Club, has been presented by that organization with one of "Cobbett's best" in recognition of his bowling three of the Young America wickets in three successive balls—Young America 20, 12. Staten Island 20, July of last year. "Our Jim" is bappy.

Answers to Correspondents.

EN A number of answers are crowded out this week, and will appear in our next issue.

L. P. B., Houston, Tex.-Read our advertising columns.

A REATER, Fredericton, N. B.—The address is New Smyrna

H. K.- Address of Commodore Jersey City C. C., is Charles E. Chase, 2% Broadway.
W. L. L.-Sand to Manning's Yacht Agency, 53 Beaver street.

N. Y., for yachts in the market. W. P. S.—Address Commodore W. D. Lintz, Poughkeepsie C. C.,

Poughkeepsic, N. Y.

C. O., Erie, Ph.—You will find Jordan's "Manual of Vertebrates"

the thing you want. See our issue of March 11th.

G. G. G.-Geljon's anti-fouling paint for yachts is to be had of Gelien & Co., 155 Maiden Lano, N. Y.

C. G. H., Montreal.—A preparation of paradine dissolved in haphtha or benzine, is used for waterproofing fish lines.

naphtha or benzine, is used for waterproofing fish lines. C. F., Montreal.—Chas. Reiche & Bro., Chatham street, New York, can supply you with the birds, and is thoroughly reliable.

H. S. H., Bellefonte, Pa.—Will you be kind enough to tell me where I could purchase some live quall? Ans. We cannot tell you.

**Recuration of Mantreel -- We will give the desired information if

you will send us more specific particulars, the kinds of fish you have in ac unrium, etc.

RAGE HOUSE, TEXES.—The fastest mile time on record is that of

Ten Broeck, 1.391. Your other query we cannot answer, as there is no official time recorded.

E. W., Pekin, N. Y.—A letter addressed to you has been re-

turned. We should advise you to consult the editor of the Jacksonville (Fil.) Sun and Press.

W. H. C., Haverford College, Pa.—Can you tell me the date of

W. H. C. duration of the Were sketches of the Eastern Archery Meeting? Bazaar No. 44, vol. XII.

W. R. B., Orange, N. J.—Unable to give you Mr. George Hecker's address or the pedigrees of the Laveracks Zip and Naomi. We will be pleased if any of our subscribers can.

Naomi. We will be pleased if any of our subscribers can.

An Inquirer, Brooklyn, N. Y.—Your horse is not an unusually beavy grimal. Whether or not he is fitted for saddle use can best

bedy mining by actual experiment. Saddle hun and try it.

RIFLE, New York.—Which model Winchester did Mr. J. E. Stetson use when he won the modal presented by Schulger, Harriey

Gerham, July 22d, 1876, for rapidity and accuracy? Ans. Model

of 1872.

C. N. K., San Francisco.—R. Valentine, Janesville, Wis., did have wild rice for sale. If he has sold it all, your best plan is to order in wi nance either of him or of Mr. Charles Gilchrist, Port Hone. Out

NARGULL-You may purchase the pipe of F. Kaldenburgh & Co., Fulton street, New York. There are several recappers, the comparative merits of which depend upon the use for which they

C. A. G., Tom's River, N. J.—We cannot discriminate by recommending one brand of shot as superior to another. The various makers claim special advantages, and the merits of each have already been set forth in our columns.

H. W. P., Weyauwega, Wis.—The treatment for your hound should be the same as recommended to H. H., Brooklyn, N. Y., in this column. We make no charge for receipfs, and feel ropaid when we can be of real service to our brother sportsmen.

J. A. H.—No ilrm manufactures waterproof canvas for boats. Use 8 or 10 ozs. duck, and apply following: Boil 6 ozs. hard yellow soap in 14 pints water, and add half yound patent driers, 5 lbs. boiled linseed oil, or take reduced proportions. If color is wanted, add paint as desired.

W. J. R., Roxbury Station, Conn.-1. For map apply to the Coltons, William street, New York. 2. The rifle sight is highly spoken of. 3. We bave repeatedly refused the advertisement of the firm. As to their reliability apply to Dun, Barlow & Co., New York, or to any other mercantile agency.

T.H. R., Poughkeepsie.—Is there no way of preventing the passing if a bill now before the Legislature permitting persons to fish with nets in the Walkill? The bass fishing there is very good, and now they propose to ruin it. Ans. Post your representatives at Albany and secure their intervention to defeat the bill.

M. P. B., New Haven, Conn.—Mr. Vero Shaw, in his excellent "Book of the Dog," stacks, in a special chapter devoted to the "getting up" of dogs for shows, that "curity coat which should be fiat are sometimes fromed out," and "band rubbing is most efficacious as a means of both drying and flattening down the

It. W., Cypress Mill, Texas.—For instructions to a novice in the various mades of fishing we commend Hallock's "Gazetteer." The pages devoted to ity fishing, trolling, care of tackle, etc., are exhaustive and explicit, and leare little to be said. Dr. Henshaw's book on the "Black Bass," we may premise, will also be a valuable work; worthy of the study of even experienced angiors.

G. H. E., New York.—I have a Winchester Express rifle of .50 cal., shoots very well with the light bullet, but I would rather use solid builets of about .500 grains, and .90 grains Hazard powder. Would ask your advice whether the rifle would about well up to \$50 yards 7 has. The gun lass slow twist and shallow rifling, and made only for short, light ball; will not shoot with a heavy, long ball.

Partifice, Dover, N. R.—1. For scroll saws write to R. Simpson, 132 Nassau street, New York. 2. The National Guardman is defunct—"ideal on the field of honor." 3. For a work on medical botany write to William Wood & Co., publishers, 27 Great Jones street, New York. 4. We did not publish the scores because they could not be obtained, although promised. 5. Beadle & Co., New York, publish penny songs, and there are other firms engaged in the some turniness.

F. G. C., New York City.—I. We know nothing of the guns. You may be assured of square dealing if you go to any one of the several gun dealers whose names appear in the advertising columns of this paper. The customer has in their long-established reputation a sufficient guranty. 2. There are some good trout streams in Sullivan County. Go to I. M. Baadley's, at Eldred, where, later reports say, there are plenty of fish.

R. H. E., New Jersey.—Your attention is called to our notice at the head of this column. In issue of March 18th we commenced a series of articles on dog breaking, which may interest you. To get your dog, under proper command use a check-cord. It is not necessary that your lessons should be confined to your house or yard, as you can carry the cord with you in your walks and pursue your instruction in the open fields.

T. D. New York.—I. I have a Sharps military ride, Borchardt's model, and will go to Wyoming Territory for a couple of years, Do you think this arm a good one for large and daugerous game with the service charge? 2. Could I use a 450 or 500-grain bullet in a Ballard Credmoor ride, 450 al., 105 grains powder, Everlasting shell, with reduced charge of powder, say 85 grains? Ans. 1. Yes. > Year

P. H., Bloomsburg, N. J.—A friend's dog has a large swelling on under jaw; red blotches all along the jaw. It has broken open in one or more places. Dog seems very much affected. He also has small red blotches on forelegs. The dog is a well-bred setter, but from his appearance will not last long. Ans. If the swelling is an inflammatory or painful one, would apply poulties of flaxseed meal. Give a single dose of castor oil and from two to three grates of quining three times a day. Write further if there is no improvement.

J. W. B., Pueble, Colorado.—In Colorado the killing, snaring or having in possession of "partridge, pheasant, prairie chicken, prairie hen or grouse" is prolibited, save between Oct. Ist and Nov. 18th. Protessional taxidormists are allowed to kill birds and animals for specimens in unuscums. No person shalt kill or entrup elk, buffato, deer, fawn, anticlope, mountain sheep or bison between Jan. 1st and Sept. 1st; and then only in reasonable quantities for food. Apply to the Governor or to the Secretary of your State for a copy of the law.

M. B. COUNCIC, Americus, Ga.—I soo it stated in a Philadelphia paper that a catamount was killed near that city, weighing over fifty pounds. What is the difference between this species and our wild cat? Sixteen and eighteen pounds is an average weight of wild cats here, and twenty-six pounds is the heaviest I ever saw or heard of. How many species of catamourt, or wild cat, are there in the United States? Ans. There are three species of the Felidar in Eastern America: two of them small, Lipux rulus and L. canadensis, and one large, Felia concolor. The one mentioned in the paper was probably a young one of the last named species.

D. McG., Rutherford, N. J.—I have two hound pupples three months old. One is badly bow-legged and can hardly walk. He seems most afflicted in the first joint and walks on the outside of his feet. I have kept them in a large dog house, locked up, with hardly any exercise. The other puppy is all right. Ans. All dogs, and especially pupples and growing dogs, should have their liberty and be allowed to run about and take plenty of exercise. The larger breeds of dogs should not be kennelled in barrels, as it is apt to crook the legs. If your pupy's condition is such that bandages or loggins can be adapted so as to afford temporary strength, it may be well to give them a trial.

strength, it may be well to give them a trial.

M. L. V., Savannank, Ga.—I. My Trish sector has lost all the hadr around her eyes, and her frequent scratching keeps the parts sore; she has also two sore spots behind the ears. What shall I do for her? 2. I have been advised to keep her from a litter of puppies, only four or five. I sit necessary to do so in order to insure success in raising the puppies? 3. What is the best food for a bitch suckling pups? Ans. I. Examine carefully for the presence of lice; if found apply a small quantity of kerosen oil, and then thoroughly rub in an abundance of lard or lard-oil. Leavo on twenty-four hours and repeat if necessary. 2. A well-conditioned bitch should nurse satisfactorily five or six puppies. 8, Mixed food containing small quantity of meat. If your bitch is sleldy secure a young and healthy bitch as foster-mother for her

H. H., Brooklyn, N. Y.—I have a setter puppy about eight monthsold: he has just had the distemper, and though he is apparently recovered from that disease, still he seems to have been troubled ever since the attack with a sort of spinal paralysis. He has great difficulty in raising himself to a standing position, and seems unable when standing to set himself in motion. By letting me know what would be beneficial for list dog you will greatly oblige. Ans. Yours is only a typleal case and one of the common results of distemper. Administer two grains of quinine with one-sighth to one-quarier nux vomica three times a day. The quantity of uux vomica must be governed by the resulting symptoms, which will manifest themselves principally by twitchings of the muscles. When this takes place the dose of nux vomica must be reduced. If you prefer, you might give a large teaspoontul of cod liver oil twice a day in place of the quinine. Feed liberully, and write result later on.

crully, and write result later on.

PAUL, West Boylston, Mass.—My setter died last week, eight
nonths old, in the morning he was lively and playful. In the aftermonth noticed that he was inclined to be alone and very queit,
his hair coming out by handfuls, not caused by shedding, as he was groomed every day and had been combed and brushed same morning. I watched him all the afternoon, and he showed r gn of sickness than disinclination to move; nose cold-ulse regular. About six he commenced to champ other sign of steames that distribution to move; nose cold and moist, pulse regular. About six he commenced to champ his teath and froth badly. After doing so for about ten minutes, he threw back his head and had a fit, which lasted but a few mo-ments; he was then quiet for nearly an hour, when he had mother fit, and so on until two next morning, when he died-the another it, into so in that two least morning, when he died—the fits coming oftener toward the last. When I saw the first fit com-ing on, I prepared an injection of sulphuric ether and laudanum, same as I have used in other cases of fits, and gave injection once same as in about half-hour, none being returned, but did no good. After death opened him and found nothing in stomach or intestines ocause the lits. The liver was motting in stomacn or intestines to cause the lits. The liver was mottined; spots about the size of a pint howl—about eight times its natural size. Can you tell me what alled him, and what I should have done different in treatment? Am a little anxious, as I have a number of other dogs, and the rather sudden death and sickness troubles me. I wish to save the rather suntien death and sloateds at others, if possible, although I may never have a similar case.

Ans. From the description which you give, it is impossible to say precisely what was the cause of death, because you omitted to state the condition of the brain and spinal cord. In all probability state the continuou of the brain and spinit cord. If his probability the disease was chiefly in the heart, which you state was retry much enlarged. It is not unlikely that "the fits" were due to the plugging of the blood vessels of the brain membranes with clots, or something firm from the heart. Whatever treatment was adopted, it should therefore have been in the direction of stimulations. adopted, it should therefore have oeen in the direction of stimu-lating the heart to increased action. For this case the simplest treatment would have been whisky. If this fails, nothing can do any good. But heart disease should always be reconticed by a careful breeder, because it is exhibited by panting and a weak pulse, even if it chances to be regular, which it usually is not. The "shedding of coat" and "mottling of the liver" have probably nothing to do with his sudden death. It was for cases like hly nothing to do with his sudden death. It was for cases like yours that we arranged with the Columbia Veteriary College, No. 217 East Thirty-fourth street, of this city, to receive all specimens and furnish a complete diagnossis free of charge, providing that the express charges were prepaid. Had you awailed yourself of our liberal offer, the case would have been covered most thorrows.

REMOVAL .- On or before May 1st the Forest and STREAM will remove into its new offices in the Times building, Nos. 39 and 41 Park Row.

-We have received a copy of the constitution of the Long Island Sportsmen's Association, the preamble of which sets forth the objects of the organization to be "to secure the propagation and protection of fish, game and birds by the recommendation and enforcement of judicious laws prohibiting the killing and sale of game and fish during improper seasons, and their wanton destruction by unsportsmanlike means; also to foster genuine social spirit and unison of action among the several clubs of Long Island and their members, and encourage

skill in the use of the rod and gun."

On two points the new association has taken a most commendable stand. One point is the mutilation of pigeons in trap shooting, concerning which the sportsmen of Long Island say :-

This association denounces the mutilation of birds as un-

manifice and burbarous, unworthy of gentlemen and calculated to bring trup shooting unjustly into disrepute. And we pledge curselves to do overything in our power as an association and as individuals to prevent such practice and punish its perpetrators.

The other movement, which seems to us to be judicious and likely to result in good, is the invitation extended to the farmers of Long Island, who may be in sympathy with the objects of the association, to become honorary members of the body. This is in direct sympathy with the course which we advocated some weeks ago of securing the cooperation and friendship of the proprietors of farm lands. A mutual understanding of their mutual interests by farmers and sportsmen will result in more efficient game preservation than we can ever hope to attain by piling up laws on the subject. The Long Island Sportsmen's Association has a ground field before it. Rightly fulfilling its mission it may stand as a worthy model for all other organizations of like aim. It has an excellent constitution; we hope that it may live up to the principles therein. Now, as a further step in the right direction, let the delegates who go from Long Island to the State Convention next June infuse their spirit into the other clubs which they meet there.

Paymaster L. G. Billings, who went out in the Irish relief ship Constellation, last Sunday, is well known among the sportsmen of Brooklyn and vicinity as an expert shot, and the owner of some very handsome

-Read the advervisements. This will save much postage, work and paper, now consumed in writing for information there given.

THE ANGLER'S ANNIVERSARY.

HE old definition of fishing-"A rod, with a string and worm at one end of it, and a fool at the other -has an unpleasant indorsement from the Legislature in the fixing by law of April 1st as the beginning of the open season for trout-fishing in this State; especially does the most earnest and devoted lover of angling feel the apparent truth of the definition when he awakes on the 1st of April to find the ground covered snow. No man will acknowledge, even to himself, that he is a fool; but some of us are free to admit that we do sometimes look like fools. And, on the first of last April, when we were trudging along a country road on Long Island, with trout-basket slung to our side, and rod in hand, we did feel, that the urchins who met us and asked us where we were going, and how the skating was, etc., etc., had altogether too much reason for their jeers than was pleasant.

The past winter (is it past?) has been so open that there will be an unusual number of trout, and they will be fat. There having been so little ice, it has not been possible for that most destructive of all poaching -fishing through the ice-to be carried on at all. unusually high temperature has also prevented solid freezing of brooks, and thus there has been no destruction of spawners, or eggs, or young fish, or infusoria. These circumstances combine to insure plenty of fish two years hence, and fat fish this year. The preserva tion of spawn and infusoria insure good fishing two years hence; and the preservation of spawners and young fish insure fat fish this year.

But we think the fish will be harder to take this year than usual. First, because a warm winter generally means a late and cold spring. Unless the first of April is warm and fine, the fish will be loath to come to the surface to take the fly. By using good-sized rather bright flies and letting them sink a few inches trout may be induced to take hold, that would never take otherwise. The second circumstance that will work against a full creel is the very fact of the warm weather we have had during the late winter, The trout will not be so hungry; they have had far more feed than usual, and the angler need not expect to find them ravenous.

The number of anglers who will cast a fly on the fish this season will be greater this year than ever before. The crowd of ithem that we see replenishing their stock of tackle at the best shops indicate the pleasant fact that the lovers of this fine sport have participated in the profits of the present boom. The sales of the larger fishing tackle establishments show that inot only more people are buying than ever before, but that the demand for the best goods is altogether unprecedented. No doubt the same thing is true of smaller stores.

IS THERE A SAFE BOILER?

HE increasing frequency of boiler explosions, and the loss of life and property which is invariably coupled with them, is a subject which deserves more attention from our busy inventors and the owners of mill property, and certainly those who expose life and limb to these dreadful sources of power. The latest horror is that which occurred in Frankford, Ind., by which the entire staff of employés of a flax mill were killed while in the act of warming themselves. The details of this frightful accident are almost too shocking to read. The widowed mothers and fatherless children thrown help lessly on to the charities of the public is a part of the sad story, which accords well with the rest of the whole sale devastation, and the utter demolition of the mill finished well the record of death, suffering and loss,

Now it is about time this sort of thing were stopped, and some means taken to prevent such frightful occurrences We have had enough of such dreadful details of suffering and loss. Where are our boasted brain-workers, whose labors have given a world-wide reputation to our country? Where is the humanity of our moneyed men, whose factories of various sorts cover the land, and whose operatives form the bone and muscle of our manufacturing and commercial industries? Why do these men found an extensive plant, and place therein a boiler which at any moment may blow the whole structure to atoms, scattering wide death and destruction? Although there is a mystery affecting the causes of boiler explosions, still enough is known concerning them which ought at once to condemn that class of boilers (comprising three fourths of those in use) which contain a large amount of water heated to such a degree that when the shell ruptures, which it is always liable to do from a number of causes, the water in it changes its condition into steam instantaneously, and with immense force. When a boiler is new it may be tested to far above the steam pressure it is expected to carry; but sufficient allowance for the weakening of the shell by age, rust, action of the fire, undue strains arising from imperfect settings, bad construction, or careless attendance, is not provided for. Let this subject be well ventilated. Let the inventors and manufacturers of so-called safety boilers prove that their produc-

tions are really safe, and that they will work as economically as those in more general use, and their universal adoption is assured with like benefit to the builders and the public safety. With such a boiler a new field would also open to vachtsmen, devoted to the mechanics of an engine. There are eight characteristics a boiler for popular marine use must conform to for successful competition with the death-dealing traps of the day. They are: Absolute safety against anything but local failure at the worst; light weight; small space; economy in first cost; repairs and attendance; the highest efficiency in evaporation; capability of using salt or fresh water, and burning effectually various kinds of fuel; long life. Where is there a boiler any man could "run," and no man could blow up if he tried?

THE AMERICAN FISH CULTURAL AS-SOCIATION.

THE ninth annual meeting of the American Fish THE minth annual meeting of the Directors' Cultural Association convened in the Directors' rooms of the Fulton Fishmongers' Association, Tuesday and Wednesday, March 30th and 31st-Mr. Robert B. Roosevelt, President, in the chair. There were present Mr. George Sheppard Page, Vice-President; Mr. Eugene G. Blackford, Treasurer; Mr. James Annin, Jr., Recording Secretary : Mr. Barnet Phillips, Corresponding Secretary Mr. Seth Green; Mr. Livingston Stone, United States Assistant Commissioner of Fisherics: Dr. W. M. Hudson, Fish Commissioner of Connecticut : Mr. Asa French, Fish Commissioner of Massachusetts; Mr. Hugh D. McGovern, Mr. S. A. Kilburn, artist; Mr. Theodore Morford, Dr. J. P. Trimble, the entomologist : Mr. Samuel Wilmot, the oldest shad fisherman on the Hudson; Mr. James Benkard, Mr. J. S. W. Thompson, and many others, whom, owing to the neglect of the meeting to call the roll, cannot be named.

The first business of the meeting was the reading by Mr. Barnet Phillips of a memorial paper on Professor James W. Milner, which we publish to-day. Mr. Roosevelt followed with a paper detailing the experiments at the New York State Hatchery in crossing various species of fish, the successful experiments having been: Salmon trout with whitefish; salmon trout with the brook trout; brook trout with fresh water herring, with California salmon, and with the California mountain trout; shad with striped bass and with herring.

Mr. Seth Green's report on the introduction of the California salmon into New York State was also read by Mr. Roosevelt.

Mr. Livingston Stone's discussion of the practicability of the transportation of fish was one of the most important papers of the day, the author contending that the mortality of fish while in transit was always due to some cause which it is possible to remove by added experience and increased facilities.

One of the most interesting episodes of the meeting

was the practical demonstration, by Mr. James Annin, Jr., of the process of stripping the fish in artificial propagation. A number of gravid trout had been provided, together with the necessary tubs and pans. Mr. Annin, taking the female trout, pressed out the eggs into the pan, and then deposited upon them the impregnating milt, pressed from the out male. The interesting fact was here brought out that the eggs of the trout are always of the color of its flesh. Upon being questioned as to how he determined the females from the males, Mr. Annin replied, "By general appearances;" and it was conceded by the rest of the practical trout culturists present that while a man who was accustomed to the fish could readily distingush the sexes during the spawning season by the increased size of the gravid fish, and the quicker movements of the males, there was still no absolute mark which might guide the novice. The old theory of the lighter color on the belly was long ago exploded.

Mr. Charles Hallock presented a very entertaining picture of the cod fisheries along the coast of Labrador. Then followed a discussion of the spawing habits of the land-locked salmon; the resulting opinion being that these fish go to running water for the purpose of spawning, because in running water they find a clear, gravelly bottom upon which to deposit their eggs, and that if such a spawning ground is to be found in a lake or confined body of water the fish will spawn there.

Mr. Phillips read a paper prepared, by Mr. George Lamphear, detailing the number of pounds of fish annually sold in the wholesale department of Fulton Market, the exhibit showing, from the tables, that from March, 1878, to March, 1879, of fish belonging to American waters and sold in Fulton Market, 33,529,600 pounds were sold, and from March, 1879, to March, 1880, 31,276,666, were sold, showing an increase for the latter year of 646,700 pounds.

Other papers read were: "Do Grilse Spawn?" by Mr. Bottman, of the Fisheries Commission of Holland; and on the "Pound-Net Fisheries," by Mr. Theodore Reinecke, of Sandusky, O.

Wednesday morning the Association listened to a most valuable paper by Professor W. O. Atwater, of Wesleyan University, on the nutritive properties of fish. This essay is the result of a very exhaustive series of chemical analyses of the ingredients of the flesh of different fishes, and an exhibit of the relative values of each species as an article of diet. A revised copy of the paper will be prepared by Prof. Atwater for publication in the next number of the FOREST AND STEFAM.

Among the other papers read yesterday was one by Prof. Brook, of the John Hopkins University, on the propagation of the lobster.

All the papers read before the Association will be published in the FOREST AND STREAM. The convention has been an interesting one, from which the members have gained new knowledge by the interchange of their experiences, and the stimulating effects of those discussions are seen in the increased interest manifested by the public in fish culture and in all that pertains to the industry.

The members met at the Metropolitan Hotel last evening to partake of the annual dinner. These banquets are always delightful, and that of last night was no exception to the rule.

THE TROUT OPENING.

N EXT to the pleasure of a trip to the trout streams toclaim), is that of a visit to the exhibition of trout by Mr. Eugene G. Blackford, at his stand in Fulton Market. These annual displays have become one of the pleasantest features of the season in New York and vicinity. Started in a small way some six or seven years ago, to show some of the practical results of artificial trout culture, these exhibitions have long since outgrown this original design. Now, instead of a limited number of specimens of trout, Mr. Blackford collects on his marble slabs the kings of the brook from all over the world; and in place of the few interested fish culturists, dealers and anglers, great throngs of ladies and gentlemen in an unnumbered multitude, fill the market and press around the stands, where lie in cold and silent state the 1 oyal monarchs of the trout streams.

To-day and to-morrow, as the very tasteful and elaborate invitation cards promise their recipients, the display is superior to that of any former year. Mr. Blackford has been for months securing, through his agents at home and abroad, choice specimens from various parts of the world. On one stand are trout from the streams of England, Scotland and Ireland, and by a happy coincidence the reader of the Forest and Stream is enabled to-day to see some of the fish of which "Ringwood" writes so entertainingly on our first page. These were secured by Mr. Blackford's agents in the London market. Elsewhere are specimens of trout from France, secured through the courtesy of Capt. Truedelle, of the French line of steamers. Canada is represented by fine specimens of sea trout from the Restigouche, and by some beautiful fish-the finest wild trout in the Dominion-from Three Rivers and the Quebec district. New York State supplies choice specimens of Salvelinus fon tinalis from the preserves of the South Side Club, Long Island, who have the finest facilities for raising trout of any establishment in the State. Mr. Hugh McGovern, from his ponds back of Brooklyn, sends live trout in aquaria; and live specimens are also exhibited from the establishment of Mr. A. Rackow, Foster's Meadow, L. I.; dead fish from Mr. W. E. Robinson, Patchogue, L. I., and from Mr. Ira Hoyt, Halsey Valley, Tioga County. The New York State Hatching-house at Caledonia sends a complete series of the different varieties of brook trout, California salmon and salmon trout, California brook trout and the McCloud River, California, trout; also a display of young fry from one month to one year old. Mr James Annin, Jr., who has gained much credit among fish culturists for the invention of a method of shipping eggs to Europe in a way which requires no attendant, and who is becoming known as a close observer and a successful fish culturist, will contribute a handsome display of brook trout eggs in the hatching-jars, showing the process, and also a fine collection of wild Caledonia Creek and cultivated brook trout.

From New Jersey, Mrs. Slack sends specimens from her ponds at Bloomsburg. Pennsylvania's quota is fur-nished by Mr. Jeremiah Comfort, one of the veteran trout culturists of the State, a friend of Thad, Norris, and to whose pond Mr. Norris used often to repair. These fish were brought up and nurtured under the shade of a Quaker brim, and those who know say that while they have lost none of the game qualities possessed by other artificially grown trout, they also have a peculiarly fine flavor, rightly attributed, we surmise, to their placid disposition. From Wisconsin come the specimens contributed by Mr. H. F. Dousman, of Waterville, one of the largest and most successful trout culturists in the United States. Mr. Frank Clark, of Northville, Mich., sends brook trout and California brook trout : while Commissioner B. B. Redding, of California, supplies specimens from the McCloud River and from Truckee River; also from Denver, Colorado. In close proximity to these strangers from the Pacific, the New England visitor to the Fulton Market will find some of the mountain brook trout from the dashing streams of New Hampshire; these are sent by Mr. Geo. H. Dierckerman, of New Hampton.

N. H. From the Cold Spring Trout Ponds, Charlestown, N. H., come trout raised by Mr. Livingston Stone; and the same gentleman also sends some whitefish fry hatched from eggs which were imported from Switzerland. There are also to be seen some young land-locked salmon, which were started in jars on Mr. Blackford's stands.

From this brief catalogue of the specimens now on exhibition, it will be seen that Fulton Market is well worth a visit to-day and to-morrow.

AMERICAN CRICKETERS AND A FOREIGN TRIP.—Although a great deal has been said in Philadelphia during he last three years about sending a team of American cricketers abroad, and a number of plans have been outlined by great admirers of the game, it is a fact that nothing at all has been done by the men who would be likely to go as players. At the annual meeting of the Young America Club, Mr. Vaux offered a resolution that Mr. George M. Newhall be authorized to take such steps as he should see fit toward taking a team of Philadelphians to England this summer, and authorizing the Secretary to correspond with the other Philadelphia clubs on the subject; but the whole thing was intended to be discretionary with Mr. Newhall, and he has done nothing at all.

From conversations we have had together during the past few years on the subject, and from what we have heard of his saying to others, we feel sure that he has not seriously considered the subject, for the following excellent reasons:—

First, all the matches for the season are arranged in England early in the winter, and though, no doubt, our team could have had plenty of matches on short notice, there is no certainty that our team could have played on the best grounds, like "Lord's" and "The Oval," without which a trip to the Old Country would be a failure. Second, on many other accounts the time was too

Second, on many other accounts the time was too short to map out a satisfactory programme, and have it all arranged with some good and responsible party on the other side.

Third, so far as we know, the men who would be needed have never been asked whether they could get away or not.

Mr. Newhall's modesty has prevented him from being very enthusiastic at any time over the idea of playing in England, but we hardly agree with his reasonings on the subject, and doubt if many of our cricketers would. All he says is true enough, but does not, in our opinion, constitute an argument against playing over there. The idea of winning is not of vital importance in our mind, and we would very much like to see a representative team of Americans go over and try their luck, feeling sure that it would make a fine showing, and do the game good. But any team that decides to sally forth to the enemy's country must be no scratch team, but the very best, and unless it is led by Captain Newhall it will resemble the play of "Hamlet" with the part of Hamlet left out. Let us remind Mr. Newhall, however, that over five and twenty years have sped since we used to watch together the "rise and progress" of the game from the sharp edge of a rail fence over Camden way, and that he owes it as a duty to all American cricketers to lead the first invading van to a foreign shore, before his hand loses its cunning, and there is a creaking noise in his knee-joints. nothing can be done this year, we shall look forward to the next with a very Micawberish eye for something

Notes.—The New Jersey amended law provides that no woodcock shall be shot before the 1st of September; and many of the sportsmen of that State are in doubt whether or not the law has jurisdiction over the deeds of a proprietor on his own estate. The game on a man's farm, they argue, is his individual property; the State has no right to say what he shall do with his woodcock any more than it has a right to say what he shall do with his cow. If this reasoning be correct, it would seem that the New Jersey legislators might be engaged in more profituble business than framing game laws, for the public lands alone of the State are hardly extensive enough or rich enough in game to warrant much legislation.

It happens in Jersey that when a gunner shoots a woodcock he generally shoots it on some one's land. If the bird be the property of the man upon whose land it is killed, the person who shoots it and carries it off is as much a trespasser and a thief as the person who steals a man's horse in the night time. Are the advocates of the principle of property in game willing to go so far as this in their arguments?

We should like to see the legality of some of the game enactments tested by a man who would stand the cost of the experiment. For instance, it would be an interesting, and not altogether a profitless undertaking, to get the decision of the highest tribunals as to the right of one State of this Union to debar non-residents from shooting the game, except upon payment of a considerable fee; or the legality of a statute making it a misdemeanor to shoot a pigeon. Without at all questioning

the good results likely to accrue from a non-resident prohibitory law, or the motives leading to its enactment, we are inclined to the belief that in their commendable zeal in game prohibitions some of our legislatures may have lost sight of some of the fundamental principles of our government and society.

We publish in our Natural History columns to-day the description of one of the new birds collected by Mr. Fred. A. Ober, in the Antilles. This bird, as Mr. Lawrence tells us, was before erroncously referred to a known species, but was afterward found to be quite distinct; and we are much gratified to record this addition to the rich results of Mr. Ober's expedition. The Margarops dominicensis is the twenty-first new species discovered by our enthusisastic correspondent. Mr. Ober is one of those naturalists who are happily born with a taste for adventure and exploration in new fields. While yet a boy, he had a complete collection of all the birds of his New England home; and later he spent some months in Florida-not the Florida of the conventional touristbut the Florida of Seminole fastnesses and rare birds and animals, whence he wrote the letters which first made him so pleasantly known to our readers as "Fred, Beverly."

In 1876 he applied to Professor Baird for an "undiscovered country," where he might pursue his favorite study upon ground not before investigated by natural ists. Among such fields presented to his notice was the one chosen, and which has yielded him such satisfactory results. The work which he accomplished has already been published in these columns, and was of such a character as to excite attention among naturalists everywhere; more interest has been manifested abroad than here; and there Mr. Ober has won much credit for his work. The experiences of the two years among the islands were embodied in the volume "sub-Tropical Wanderings," which was published last fall by Lee & Shepard, Boston, calling forth from the poet Whittier a very complimentary letter to the author.

Mr. Ober is again in the field, collecting farther material for a proposed history of the birds of the Lesser Antilles. While it is unlikely that the present trip will be as notable for the number of new discoveries as was the last, there is still much to find out in the matter of the natural history of the species already secured. As before, we shall publish papers from Mr. Ober's pen, the first of which has already been received, and will appear next week.

Dr. Gordon Stables, of Twyford, Berks, England, who is to act as one of the judges at the Westminster Bench Show, will be in thiscity from the 23d inst. to the end of the month, and letters may be addressed him in care of this office. Dr. Stables has added to his several works already published a book shortly to be published on "The British Bloodhound"—a subject which is practically new, and to the treatment of which the author has brought the aid of the best breeders of the day, as well as of many old manuscripts and sketches and unpublished documents.

Owing to an unusual pressure upon our space this week, much late news and many other matters have been necessarily and reductantly deferred. We ask the indulgence of our friends, promising them all attention in due time.

Clarksburg, Montgomery County, Md., has a foxhunting club, of which Col. T. H. S. Boyd, author of the "History of Montgomery County," is one of the chief promoters and the President.

The annual parade and tilt of the Charleston Light Dragoons is held to-day, April 1st. This is one of the parades of Charleston which is always anticipated with much pleasure.

GAME PROTECTION.

—Commissioner Redding has been instrumental in the introduction into the California Legislature of a bill providing an appropriation of \$2,500 for the importation of song and game birds into that State.

UTAIL.—The Utah Game and Fish Protective Society of Salt Lake City has been organized with the following list of officers and directors: President, John Sharp, Jr.; Vice-President, Bolivar Roberts; Secretary and Treasurer, L. S. Hills; Board of Directors, M. H. Walker, Geo. A. Meears, LeGrand Young, H. J. Richards, Salt Lake City; W. W. Cluff, Coalville, Summit Co.; Albert Miles, Peoa, Summit Co.; Aaron Farr, Logan, Cache Co.; W. B. Richards, Menden, Cache Co.; W. B. Richards, Menden, Cache Co.; W. B. Richards, Menden, Cache Co.; John Adams, Co.; J. M. Browning, Ogden, Weber Co.; John Adams, Corinne, Box Elder Co.; Wm. Seegmiller, Richfield, Sevier Co.; Joel Grover, Nephi, Juab Co.; J. W. Turner, Provo, Utah Co.; Jos. R. Porter, Porterville, Morgan Co. The society has been established for the

furtherance of game protection and the improvement of the game laws of the Territory. All persons are earnestly invited to coop rate with it in securing these ends.

The close seasons in Utah are: Quail, partridge or grouse, Mirch 15th to Aug. 15th; wild ducks, April 15th to Aug. 15th; beaver and otter. April 1st to Nov. 1st; imported quail or other imported birds are protected for a period of five years; elk, deer, mountain sheep and antelope, Dec. 1st to Aug. 1st. No fish can be taken save with a line (except in Bear and Utah lakes between Sept. 15th and March 15th.)

The society have sent out placards and posters, and are

society have sent out placards and posters, and are in various other ways making the law known

WALLA WALLA.—The game laws of the counties of Walla Walla and Columbia, Wash. Ter., provide the following periods of protection for game: Deer and elk, Jan. Is to Aug. 15th; quail (Bob White), is always protected, except what may be trapped for propagating purposes; blue grouse, pin-tailed grouse or prairie chicken, ruffed grouse or pheasant, from June 1st to Aug. 15th—trapping of these birds is prohibited for purposes of propagation. Other sections provide for fishways, against netting, and against taking in any way whatsoever salmon salmon trout, bull-trout, or trout, except in the Columbia River, between Oct. 1st and April 1st. There is a most sensible provision which declares it a misdemeanor for any one person to kill more than twenty blue grouse, pheasants, or pratire chickens in one day. pheasants, or prairie chickens in one day,

PENNSYLVANIA—Bellefonte, Pa., March 27th.—Our association has been growing rapidly since the organization, and it seems to be in great earnest concerning the protection of game and game fish.

Game Bag and Gun.

GAME IN SEASON IN APRIL. Wild Ducks, Goese, Brant, etc,

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Came and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations: Game and its Season: Fish and its Season; Boats, Guides, etc.; Name of person to address.

New York.—Oxford. March 24th.—Norwich, N. Y., is the county seat of Chenango County, located on the Chenango River, eight miles from Oxford. It contains many sportsmen, wing-shots and some fine rifle shots. Their club turns out in strong numbers, and they hold the championship cup of Chenango County at glass-ball shooting. They are to have a rifle range this season, and will do some fine shooting, I think. W. E. L.

—Duck shooting is now in order at South Oyster Bay one hour and twenty minutes from Hunter's Point, via Long Island Railroad.

Shinnecock Bay.—New York, March 25th.—When spring directs the flight of the migrating goose and duck from their winter home in the sunny South toward their breeding place in the far north, it also implants in the bosom of the sportsman a desire to meet and salute the specific place in the first production of the sportsman and since the sportsman and salute the specific place of the specific pl spring directs the light of the linguants gloss and dock from their winter home in the sumply South toward their breeding place in the far north, it also implants in the bosom of the sportsman a desire to meet and salute them on their way. This desire was implanted so strongly in the bosom of the writer and his friend S., that they started for Capt. Lane's famous resort on Shinnecock Bay, on the 13th inst. We found the Captain's house, as usual, full, having representatives from Rhode Island, Connecticut, New Jersey, New York and Germany. The usual luck of sportsmen attended us during our stay—contrary winds, stormy days and the "if's" that so often stand in the way of a "big bag." The bay is unusually full of redheads, black ducks, brant and geese, but owing to a change in the feed since the new ielet has been running, there are not so many broadbill as heretofore. From this tim's until about the middle of April the shooting will be first-class, providing, of course, the fore. From this time that about the middle of April the shooting will be first-class, providing, of course, the elements do not interfere. The Captain can accommodate quite a large party as he runs three batteries, with the necessary decoys, and two rigs of live geese stools. Mrs. Lane still conducts the cuisine in a way that tempts the appetite of the most fastidious; fish and fowl from the bay, as served by her, are not to be had in this or part other its.

Mrs. Lane still conducts the cuisine in a way that tempts the appetite of the most fastidious; fish and fowl from the bay, as served by her, are not to be had in this or any other city.

There are two things that will effectually ruin the shooting on Shinnecock Bay, if not stopped. The first is "dusking," especially the black ducks on their feeding ground. I am credibly informed that the crew of the Government Life-Saving Station, No. 18, practice it almost continually. By the way, it is commonly reported that the whole of that crew are oftentimes found on the mainland, although it is contrary to rules for more than one man to leave the beach at a time, and then only for the purpose of getting the mail. The second is, the use of butteries in shooting ducks; they serve to make the birds wild; they are expensive, requiring two gunners, and are also uncomfortable; they do not compare with shoro or point shooting. The Captain informs me that before batteries were used on the bay, that the average bag for a day was much larger than it is now, although with a battery there are times when heavy bags are made. Another thing against battery shooting is that the sportsman has to lie still and see his bird float off before the wind, whereas almost the whole pleasure of shooting lies in handling and examining a bird after it is shot. Some of the gentlemen who own country seats on Shinnecock Bay are agitating the subject of having a law passed similar to the one regulating the shooting at Havre-de-Grace, viz., only three days in ache week. It is my opinion that it would be much better to abolish batteries and allow shooting every days except Sunday. The elements take very good care that on the average a person cannot shoot more than three days in each week.

I have just heard from Lane's the result of the shooting on Monday and Tuseday, Anser canadensis, 30; Tuesday, Anser canadensis, 30; Tuesday, Anser canadensis, 30; Tuesday, Anser canadensis, 30; Destard

NEW JERSEY .- Stockholm, March 23d,-We have had the greatest amount of woodcock here I ever saw. The mountains seemed alive with them. You could go any mountains seemed anye with them. You could go any-where on the warm side of the mountain and find birds. We have no sporting club in this county at all. The game and ilsh laws should be printed on cloth or on paper, placed in a cheap frame and nailed up in every hotel in the country. The landlords would be glad to get them.

get them.

The First Snips at Newark, N. J.—Of the 1,123 "gunners" that patrol the Newark meadows, there is one disciple of the "shot gun" whose main object in life seems to be the recording of the first snipe of the season. For many years he stood without rivals in his path, but of late other "hunters" have also aspired to the same honor; and early in February the mud holes and sewer mouths are religiously trodden out. For this year, however, the old sport is safe, for he has got to the windward of the boys by putting in a claim of the early bird on Feb. 2d. As it is impossible to go back of this return, it may be expected to hear of the "fust English" on New Year's day, 1881.

PENNSYLVANIA.—Wilcox, March 20th.—I am out here now trying to secure a lot of wild pigeons for trap-shooting. The weather has been so cold and stormy for the last three weeks that they are very hard to catch.

last three weeks that they are very hard to catch.

Duck Hunto Ne Lik River.—Christiana, Pa.—By invitation from our friend Charles Ullery, we spent part of ten days gunning for ducks on Elk River, Md., my first experience with "sink-box." Monday morning found us anxiously looking for the sloop to return from a trip to Havre de Grace with supplies for the coming week, and we were made glad by its appearance about 1 P.M. We at once started for the Bahanna Flats. This is a noted place for ducks on their way North in the spring; and as we sailed up this river we saw ducks by the thousands. We soon came to anchor and launched our "sink-box," and we were soon ready with about four hundred decoys, when the sloop sailed away, leaving us in the "sink-box," not alone, as is generally the case, this being a double one for two persons—a decided improvengent, as you can have an experienced person by your side, and earn learn to call and not shoot at another's duck, as many green horns do: and, beside, it is more sociable. Soon we had twenty ducks down, very good luck for our first ten hours' shoot. So we returned to Mr. Ullery's. Wednesday being our next shooting day, as the wind was threatening, we did not get on the duck grounds till after 9 o'clock, and soon had lively work. At 5 o'clock we took up with a soore of sixty-eighth, all red-leads, which were very fine, weighing five pounds to the pair. So ended a most enjoyable hunt.

I vill just say, Mr. C. Ullery will be fully equipped to take parties out the coming season, and if they per away disappointed it will not be his fault. I found Elk River lined on either shore with pond nets, which I think the Fish Commissioners of Maryland ought to look after, I saw one lifted, and they say it is common to get eight or nine barrels at a time. The one I saw contained about DUCK HUNT ON ELK RIVER .- Christiana, Pa.-By in-

rish commissioned so Lazar and common to get eight or nine barrels at a time. The one I saw contained about nine bushels, and the net was full of spawn. The amount taken is yearly growing less; and, if continued, will shortly depopulate the river.

TENNESSEE QUAIL SHOOTING .- Mr. Jerry Cockrell, at TENNESSEE QUAL SHOOTING—AIT, JOTTY COCKER, at Brighton, lately killed a wild albino, or snow-white hare, a remarkably beautiful animal. Recently, in one day, at Colonel Charles D. McLeau's plantation, near Rossville, in Fayette County, four Memphis gunners bagged 25, 30, 50 and 50 quail and snipe (one woodcock), and all agree they were treated by Charlie and Jim the very "best in the world," Our friend "Guido" was one of the four.

the world." Our friend "Guido" was one of the four.

ILLINOIS.—Lacon, March 24th.—Ducks have been more plentiful on the Illinois River this spring than for several years. Immense quantities have been killed, and the shooting is yet good and probably will be for the next three weeks. Bags of 100 in a day, to 183 in a half day, mostly mallards, by one of our local Nimrods, have not been uncommon. Twenty to fifty in a half day is common work for ordinary shots. But the killing of ducks on the Illinois River is an art, a trade of itself. The tyro is more apt to freeze his fingers and get a ducking himself than to bag many ducks. But there is now and then a day that the ducks appear to delight in being killed. They come right in and light right down among the decoys and wait patienty for killing. These are the days I kick out. Capt. Henry Fisher, of our gun club, killed with one gun, in about seven hour's shooting last week, 183 ducks, mostly mallards; 125 another day.

INDIANA — Wushington, March, 23d.—Duck shooting.

INDIANA.—Washington, March 23d.—Duck shooting INDIANA.—Washinglon, March. 23d.—Duck shooting has been pretty fair around this place this month. Last Monday Jim Mulligan and W. D. Bynum bagged twenty-five, and the day after a party of four got a good many. There are very few snipe at present, and I have not heard of very many being killed. W. P. R.

Mr. D. B. Wier, of Bacon, Ill., has been contributing some seasonable notes to the Peoria Transcript about the merits of the several species of ducks finding their way to the market there. His papers have been so much appreciated that the dealers report a sale of twenty birds now to one bird before the articles were written. Mr. Wier's hints on cooking the fowl are reproduced in another column.

GAUGES .- Cincinnati, March 23d .- I have owned ten GATGES.—Cincinnati, March 23d.—I have owned ten guns; two 12 gauges, four 16-gauges and four 1-l-gauges. The hardest shooting gun that 1 ever saw was made in Berlin, 14-gauge, 30-inch, laminated steel barrels; about 7 pounds in weight. With this gun 1 have killed woodcock at 70 yards, also squirrels at 80 yards. With the same gun 1 once broke a mineral water bottle at 75 yards, but like your correspondent I would make some unaccountable misses with it. This gun is still in use. C. S. S.

HUGE GUSS.—Williamsport, Pa., March 25th.—As the conundrum "Who invented choke-boring?" has so often been propounded in vain, I think the following, taken from Bechtel's "Technologische Encyclopædie," published in Stuttgart, Wurtemburg, A. D., 1835, may interest some of your readers:—"A good many sportsmen claim that a slight contraction of the bore toward the muzzle keeps the shot closer

together, consequently many shot guns are made that differ in this respect from a cylinder-bore," Further on the author says that "some makers rub out the inside of barrels with powdered glass." and that "it has lately been proposed to out them with a slight spiral thread," as the friction caused in this manner would prevent the shot from scattering and would increase the penetration. However, I do not advise my sporting friends to try this experiment with their fine breech-loaders. To quote further: "The diameter of the bore (called caliber) of a shot gun is chosen of such a size that twenty-two exactly fitting balls will weigh a pound; the caliber of double-barrel shot guns and pistols are usually of such a size that twenty-eight to thirty-two balls go to the pound." This latter quotation is not very clear, but the author probably meant that single guns were made 22-coliber, and double guns 28 to 32-caliber. The length of barrel used was from three to three and one-half feet. The author goes on to minutely describe the various methods of making guns barrels and guns, and they do not vary as much from the to minutely describe the various methods of making gunbarrels and guns, and they do not vary as much from the processes of the present day as most people would think. It strikes me that the average Jäger of that day, who used a 32-gauge 42 in barrel gun, was no "slouch" if he could make successful snap-shots at a rabbit batteau, or knock over quail, partridges, or hazel grouse with such a weapon.

Bodolink,

A DISMAL STORY OF CURRITUCK.

BROOKLYN, N. Y., Merch. 1880.

HAVING some spare time a friend and myself selected Curriuck Sound N. C., for a week's gunning. We received a letter from a gentleman living there that "birds were plenty and shooting good." We left our good city of Gotham on March 6th, at 3.39 p.m., riz., the Pronsylvania R. R. to Buttman, thence by boat to Norfolk, arriving there on Sunday the 7th inst. No boat left for Currituck until Monday at 6.30 A.M. Spent a dreavy day in Norfolk, thinking and dreaming of geese, swan and red-heads, etc., time passing heavily on our hands waiting for our trip on the great side-wheel stemuboat Signet. Trik about boats! Why, the Bristol and St. John dwindle into the dark ages of the past in comparison to this great bont and it is simply impossible to speak of the table. We left Norfolk on Monday, sth, at 6.30 A.M. viz. the Chesapeake and Albermanle Canal, the trip through the canal being dull and monotonous, occasionaly a peach tree in full bloom, relieved the dreary and rainy day of some of its unpleascatness; in passing out of the canal we came into the Fiver that leads to the Sound. On each side of which were the finest snip marshs I ever saw, and I was told that there were alundance of the birds there but we were not after solpe. At I P.M. we came into the Sound, my friend Jenkins looking ahead, and seeing a long, black bank rising up out of the water and the boat heading directly for it, spoke to the Captain, asking him if he was going to run into it. "Why," said he, "my friend, that ere bank you see, why, bless yer soul, them's read-heads.

"Whew," says Jenkins.
"I say," says the Captain, "I guess, stranger, you haven't seen nany lirds, have ye. Why, pshaw, man that's nothing; that no-counts for our running so slow, (think of it, six hours going about thirty miles) we might run into them and damage the load." "Ah, indeed," replies Jenkins. "Be carefol, Captain; let no accident happen to mar the pleasure of this glorious trip."

accident happen to mar the pleasure of this glorious trip," "Bon't you think the scenery is charming," chimes in the Capt. Speed now, five knots. "Wonderful," says Jenkinš. We now began to see birds in great flocks, geree, swan, black ducks, etc. As we extend into the sound we see little bays or coves here and there, the perfect paralise of freeling grounds for birds, but why don't the birds go there? Simply because they can't get there, for in one small cove we counted some twenty-five out-blinds, which are bushes stuck up in the water so that a man can put a bout histide and two hundred decoys around it, and you can well see what chance birds have to come and feed. Now while I believe in all fair means of shooting. La as a sootismun, am absoliver in the first means of shooting. La as a sootismun, am see what chance birds have to come and feed. Now while I believe in all fair menus of shooting, It as a sportsman, am absolutely opposed to all such methods as out-blinds and batterles for the shooting of game, as will be shown before I am done. They are, and have been, the greatest curse to all water that have allowed them that can be mentioned. But to continue our trip. Soon we came to the first club on the Sound, the Monkey Island Club. Now we are at Churche's Island, but we did so not see any churches, but we did see numerous out-blinds that were there, Birds still plenty but flying sby of these monumental structures out in the Sound, and so on we go, until, att.30 P.M., we arrive at our destination, Van Sheck's Landing, after being twelve hours on the boat, and travelling in that time about seventy-five nitles. We were completely worn out. On stepping out the dock we were met by our friend (who by the way is a New York State gentleman) who has moved to this county and gone to farming. tleman) who has moved to this country and gone to farming, melons being his chief crop, having last year forty thousand plants in the ground. He introduced us to the proprieter of plants in the ground. He introduced us to the proprieter of van Slack's Landing, Mr. Nye. Mrs. Van Slack, having worried of liv-ing alone, has taken to herself another partner. We found by the display of birds hanging at the house on the dock that the buttery had done its work, 104 red-heads having been killed within a quar

ter of a mile of the seamboat landing.

Monday and Thursday being steamboat days, and the mail arriving only on those days, it brings together quite a number of the inhabitants of this most intelligent country. Our baggage being taken ashore we are asked to step into a two-wheel cart, before which was a quadruped called a horse, which was caparisoned in a rope-bead stall, wooden collar tied together, with rope, and wooden collar tied together, with rope, and wooden collar tied together, with rope, and wooden collar tied together, with rope, and wooden collar tied together cart, the whole putting one in mind of the third century in some heathen country ting one in mind of the tripa century in some heathen country instead of this enlightened country of ours. Arriving at the house of Mrs. Nye, all the guests having left some time ago, Mr. Nye ushered in our two guides, in the person of D. W. Lindsey and Joseph S. Parker; and here let me say, that in them we found two as good men as one wishes to have, being sober and attentive and working for the most game. For the morrow, the marsh shoultened being streams of the country of the most game. ing not being very good, we were advised to shoot out of a battery ing not being very good, we were advised to shoot out of a battery. Being opposed to battery shooting, after some tilk we were told that the law allowed shooting in this manner, and so we consented. Tuesday, the 6th, strose and prepared to go a hooting, but it commented to rain very bard, but blowing a gale from the east could do nothing but say in doors all day. In the afternoon we were kindly informed if we attempted to shoot out of a battery we were study into mean we accumpted to shoot out of a battery we would be arrested, simply because we did not reside in the Shate, Now I would like some of our wise law-makers to answer this question. Can one State make a law granting to its citizens priviges which a citizen of a sister State cannot come in and enjoy? If so, one State could pass a law prohibiting a citizen from doing ousiness in another State, simply because he ousness in another State, simply occurse he was not a resident. I do not believe that the Constitution of the United States holds any such doctrine.

Of course we had to shoot from the marsh. Being a guest of

Mrs. Nye, our men selected a point where where the birds we

in the habit of feeding, and put our decoys. Soon, what do in the habit of feeding, and put out our decays. Soon, what do we have but four of those gunners of that homorable and liberal minded place come out with two batteries and plant there within three hundred lyrards of us, and the result—not a bird to our stool; batteries killing nincty-four in about three hours. So the first day was spent and only eight birds killed, and we returned at night to our hotel disgusted with our first day's sport. Thursday, 10th, started for the beach at four and shot from the marsh in a hard rain. Returned to hotel still more disgusted than ever, to find that the battery had another big day. From the result of three days of shooting, if kept up as it now is by the out-blind and battery men, there will in five years be no shooting in Currithree days of shooting, if kept up as it now is by the out-blind and battery men, there will in drey pears be no shooting in Currictuck Sound worth naming. The 'same results will follow there that have followed in the Great South Bay of Long Island. Now, what are the inducements to go to Currituck after I tell you how the old thing works? 1. We have the Monkey Island Club, (2) The Light-house Club, (3) The Currituck Club, and (4) Mrs. Nye's. Now these four parties have leased or bought all the available marsh, both on the upland and islands. Next, the professional gunners, with their hundreds of out-blinds and batteries, what chance is there for a party of gentlemen who whished to take a week's cruise through the Sound in a yacht? They could not gun out of a battery because they were "non-residents." not gun out of a battery because they were "non-residents," they could not shoot from marshes for they do not belong to any club, or do not put up at the hotel of Mrs. Nye, which would insure them the privilege of shooting upon the marshes. I leave

sure them the privilege of shooting upon the marshes. I leave my readers to draw the conclusion.

Let me state a few facts gained from a very intelligent gentleman on our way home, in relation to the professional battery shooter. At the end of the year they stand worse off than when they started, the majority of them having to mortgage their boats, batteries and decoys for their summer subsistence.

We arose on Friday, the 12th, at 4 A.M., and started for home, bringing with us about fifty birds of different kinds, each one costing over \$2 a piece; and we were economical at that.

SHOOTING MATCHES.

New Haven Gun Club.—New Haven, March 27th.—The New Haven Gun Club held an all day's shoot on Fast Day. The day was not very pleasant, owing to a cold northwest wind. A number of sportsmen from out of town were present, and the day was very much enjoyed by all present. The club served hot coffee and lunch for both the sportsmen and spectators. The main feature of the day was the sweepstake shooting. A very good score was made by soveral who shot only for the balls. Mr. Robert Penn well deserves the laurels of the day. In three consecutive sweepstakes and the ties he shot off he broke fifth-three consecutive sweepstakes and the ties he shot off he broke fifth-three consecutive shot; and as Homer Merwin mode a clean score the badge was presented to him. Merwin is a new beginner, and broke yesterday his twenty straight. It looks now as if the badge could V HAVEN GUN CLUB .- New Haven, March 27th .- The New posterior with twenty straight. It looks now as if the badge could be seen among the coots at Merwin's point the coming season. Nothing would please us better through the months of July, August and September, when we desire to visit Merwin's Point, to take a view of the laurel and stroll around the grounds of one of the finest places on the sound, to see Homer, the proprietor of the badge, as well as the point and hotel :-

THAT CLUB CLOCK .- The clock that was contested for so bravely THAT CLUB CLOCK.—The clock that was contested for so bravely by two members of the Jersey City Heights Gun Club now graces the walls of their club-room, and it reflects credit both upon the taste and liberality of the donors. It is a very handsome calendar of the pendulum kind, and, in due deference to Heritage's known gallantry and admiration for the fair sex, has several portraits of fair beauties on its face. It is not only an eight-day clock, but it is emphatically a club clock in every sense of the word. It denotes precisely the different days for the club prizes to be shot for, the days the club shoots with the Palisade and Essex clubs, and tells, it is said, the very day the Heights boys are to vanquish the last-manded club (that is if they can spell the word). It also strikes and alarms, and tells the boys when to break up and go home. It only needs a few more slight improvements, words, I take struck and analysis, and techs are only a wear of other words, and the provided as few more slight improvements, like keeping game correctly without cheating, and occasionally ordering up the liquids, to make it a perfect article.

LYCOMING SPORTSMEN'S CLUB.-Williamsrort, Pa., March 28th ores were at glass balls; Card rotary trap; 18 yards rise; by nine members of this club: regul

The club now numbers 53 members, and is in good condition financially. J. W. P.

WASHINGTON D. C. March 20th -A nigeon and glass ball shoot-WASHINGTON, D. C., Marri, 21th.—A pigeon and glass ball shoot-ing tournament took place here on Saturday the 21st inst., which was very largely attended by those interested in field sports, and was participated in by some of the best shots of Baltimore and was participated in by some of the best shots of Battimore and this city. Messrs. Acklen, Finley, Poehler and Kenn, members of Congress, participated in the shooting, and, as it will be seen by the scores, they are not novices at the trap. The wind was strong from the northwest, making the shooting difficult and carrying many birds out of bounds, which otherwise would have been scored. First match \$2 entrance; 3 birds; 26 yards rise; one

Finley... 1 1 0 - 2 Wagner. 1 1 1 1 1 1 1 1 0 - 10 Wortsner. 1 1 1 1 1 1 1 1 1 0 - 10 Ritter. 1 1 1 1 1 1 1 1 0 - 1 Second match—\$2 entrance; 5 birds; 21 yards; ties 26 and 31

yards; 3 birds

Won by Wagner.
Third match—\$1 entrance; 3 birds; 25 yards;— Third match=\$i entrance; 3 birds; 25 yards:—
Ritter. 11 1 0 1 1-5 | Wick.
Rawls. 1 10 0-2 | Mills.
McCrae. 11 11 0 0-4 | Finley. |
Reddy. 1 0-1 | Caso.
Fourth match=\$i entrance; 3 birds; 26 yards:— 1.0-1 withdrew.

Mr. Acklen first prize; Mr. Poehler second prize. Sixth match—\$5 entrance; 5 birds; 21 yards:—

Acklen 0 Mills 1 Poebler 1

Finitey. 1 1 1 1 1-5
Wagner first prize, and Mills second.
Seventh match—Same conditions:
Acklein. 1 1 0 0 1-3
Wagner 1 1 1 1 0-4
Mills 1 1 1 0-4
Ritter 1 1 1 1 0-4
Ritter 1 1 1 0 1 1-4
Pochier 1 1 1 0 1 1-4

Wagner first prize and Pochler second prize.
Eighth match—glass balls; \$1 entrance; 10 balls; rotary trap:

Kenna... 111011001 - 7 Stumph...1010110 w. Ritter..., 11111111111- Contson... 01011110 w. Ritter..., 111111110 u.

Tenth match—\$2 entrance; 10 balls; ties 25 yards:

In the three matches Mr. Mills broke 44 balls straight, missing his 45th.

* Birds gays out.
—Carver is out with a challenge to the Frenchuen. He wants to shoot with the best pigeon shooters that France can produce, for a purse of from 10.000 francs to 20,000 francs a side, 100 pigeons. If no Frenchman will accept this, he is ready to meet ten men; they to shoot at 30 birds each, and he at 500.

AN EASTERN BRANCH OF THE N. Y. A.

SALEM, Mass., March 22d.

HE convention for organizing the National Yachting Associa-A tion, which met in New York City, March 3d, 1889, resolved that the United States be apportioned into districts or departments, in which the yacht clubs belonging thereto should have control of the National Union Regattas held in such districts pectively. The carrying out of this plan necessitates the formation of

action in each district of yacht clubs therein to secure united action in the management of such union regattas, and such aux-lilary associations will greatly aid in securing the objects of the National Association.

National Association.
The territory comprised between Eastport, Mc., and Cape Cod
was, by the resolution in the National Yachting Association Convention, assigned as one department. The clubs belonging to the
National Association in that department up to the present time
are the Portland Yacht Club of Porthand, Mc., and the Salem Bay Yacht Club of Salem, Mass.

Yacht Club of Salem, Mass.
The undersigned, delegates of these clubs, by and with the approval of the clubs, respectfully beg leave to bring to your notice the proceedings of the National Yachting Association Convention as set forth in the report of the Secretary and the copy of the constitution herewith inclosed.

And we hereby cordially invite you to unite with us in organiz-ing an auxiliary association for our department of the country, and to unite with the National Yachting Association to carry out the purposes of that organization.

The purposes of such auxiliary organization will be the same,

1. A more intimate acquaintance of yacht clubs with each other. Uniform sailing regulations and rules to be adopted for the general use of yuchts and yacht clubs at their option. 3. Aiding in the collection of correct lists of members of vacht

clubs and their yachts, together with dimensions and description and a correct and official collection of records.

4. The best and most suitable method of classification and time

5. Superintending the conduct of national union regattas in this Superintending the conduct of national afficients and the granting of official certificates to the owners
of yachts winning prizes in such regattas, when sailed under the
rules of the National Yuchting Association.

rules of the National Yachting Association.

6. The establishing of prizes for competitors in seamanship who enter their yachts to compete for such prizes under the rules of the National Association.

If will be perceived from the above that the advantages of the National Association, as felt through the auxiliary organization proposed in this department, are great, and will be of permanent than the solution of the proposed in this department, are great, and will be of permanent than the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the solution of the proposed in the proposed in the solution of the proposed in the solution of the proposed in the proposed in the proposed in the solution of the proposed in the p

benefit to all yach clubs unling in the movement here.

A regatta of, the National Yachting Association will be held by the clubs belonging thereto at some time during the coming season in this department, at which prizes will be offered for competing yachts worthy of the occasion.

yachts worthy of the occasion.

We have no desire, however, to confine the competition for these prizes to the Portland Yncht Club and the Salem Bay Yacht Club, or to confine the benefits of the National and Auxiliary Yachting Associations in this department to those clubs. We therefore respectfully request that you may unito with us in the movement by sending delegates to a convention to be held in Boston, Muss, on Briday, April 36th, A.D. 1880, at 7.30 o'clock, P.M., at Young's Hotel, to organize the Auxiliary National Yachting Association for the Eastern Department, and take part in the management of regattas and advantages of the association in this department. department.

department.

It will be seen that the joining of this or the National Association by any yacht club does not impose upon it the necessity of adopting the National rules and regulations upon all occasions, or in all regatus of the club, but only in such as the club may decide upon. It is hoped and intended that the rules of the National Yachting Association will be such as to commend themselves by their futuress and equality, and thus insure their adoption by the respective clubs. It is hopeless to attempt by any more local association to accomplish these benefits unless it is connected with a national association of permanent character, because such independent local association must be of temporary duration, and it can provide no independent tribunal of appeal to duration, and it can provide no independent tribunal of appeal to which disputed questions may be referred and the decision be universally acquiesced in. On the other hand, the rules of the National Association will be

On the other hand, the rutes of the National Association will be such as to encourage true scannanship and sea-worthy yachts, and its Executive Committee as a tribunal of appeal will command the respect and confidence of yachtsmen universally, because, selected from the entire yachting fraternity, its decisions cannot be suspected of any partially from local prejudices. A call has been published in the newspapers from the Dorches-

A call has been published in the newspapers from the Dorches-ter Yacht Club looking to a local organization for obtaining some of the benefits above mentioned, but as neither the Salem Bay Yacht Club nor the Portland Yacht Club have been included in the call by receiving a copy of the same, or in any other way, we cannot respond to such call, and we believe its limits too circum-scribed and its purposes less definite than 'those of the National Organization, or of an auxiliary association connected with it. It is perfectly practicable, however, to unite these movements, since, so far as published, their purposes are identical. Will you favor us with a report of the action of your club upon this mat-ter and gravity billion'.

ter, and greatly oblige?

nications should be addressed to George W. Mansfield, nt Secretary of National Yachting Asso We have the honor to subscribe ourselves.

Very respectfully, your obedient servants, WM. P. PARKER, DAVID HALL RICE, GEORGE W. MANSFIELD, National Delegates Salem Bay Yacht Club.
WM. SENTER, JR.,
WM. WILLIS GOOLD,
GEORGE DOANE RAND, National Delegates Portland Yacht Club. G. W. MANSFIELD Assistant Secretary National Yachting Association

N. B.—This letter is forwarded to the following clubs: Boston Yacht Club, Eastern Yacht Club, Dorchester Yacht Club, Bunker Halli Yacht Club, East Beston Yacht Club, Lynn Yacht Club, Berserly Yacht Club, Haverhill Yacht Club, Newburyport Yacht Club, Provincetown Yacht Club, Nahaset Yacht Club, Jeffries Yacht Club, Duxbury Yacht Club, Quincy Yacht Club, Quxbury Yacht C

CONGRESS AND THE VACHTING LAWS

Editor Forest and Stream

I would like to call the attention of yachtsmen through your columns, to a bill relating to yachts now before the Committee on Commerce of the House of Representatives, as it may not be thrown generally that any such legislation is in progress. I draft of the bill is as follows:—
"In the House of Representatives, March 1st, 1880. Read twi

referred to the Committee on Commerce, and ordered to be printed.

Mr. Amos Townsend (Rep., Ohio), on leave, introduced the

A bill to amend Section 4,214, of the Revised Statute, relating

to yachts:-Be it enacted by the Senate and House of Representatives of

"Belt enacted by the Senate and House of Representatives of the United States of America in Congress assembled:— "That Section 4.214, of the Revised Smithles of the United States, be amended so as to read as follows:— "Sec. 4.214.—The Secretary of the Tressury may cause yachts, used and employed exclusively as pleasure vessels, and designed as models of naval architecture, if built and owned in compliance with the provisions of Sections 4.133 to 4.135, to be Ilecused on terms which will authorize them to proceed from port to port of the United States and by sea to foreign ports, without entering the United castes and by sea to loreign ports, without entering at the Custom-house. Such license shall be in such form as the Secretary of the Treasury may prescribe. The owner of any such vessel, before taking out such license, shall give a bond in such form and for such amount as the Secretary of the Treasury shall prescribe, conditioned that the vessel shall not engage in any unlawful trade, nor in any way violate the revenue laws of the United States, and shall comply with the laws in all other re Such yessels, so curolled and licensed, shall not b to transport merchandise or carry passengers for pay. Such vessels shall have their names and ports legibly painted on some conspicuous portion of their hulls. Such vessels shall, in all re-

spiculous portion of their diams. Such vessess shall, in an re-spects, except as above, be subject to the laws of the United States, and shall be liable to sclaure and forfiture for any viola-tion of the provisions of this title. "Sec. 2.—That the said original Section 4,214 be, and the same is hereby repealed

Sec. 3.—That this Act shall take effect from, and after its

passage."

The vital differences between this and the old Section 4,214 r The vian dimerences between this and the oil section 42H relating to yachtis, are that the now law will apply to go dial classos of yachtis, small ones, as well as those "entitled to be enrolled as American vessel" (i.e., of twenty tons and upward). And in list that the new law requires not only the name, but that of the port also, to be displayed on the buil of the yacht. No yachtsman will object to the name, but everyone will be disposed to use bad language when compelled to carry the port also. Much trouble has been inflicted upon yatchtsmen already by the attempted enforcement of a statute intended for vessels engaged in commerce, which required hall-boards on bow or stern. This provision of the new law is not only useless, but vexatious."

By a recent decision of the Treasury Department, all yachts un-der twenty tons liable for any non-compliance to the laws relating and were you hable for any non-compliance to the laws relating to just dues, hisping one consideration with another, a yachts-man's lot was quite a happy one," if his craft was under twenty tons

is new law will now put an end to his term of blissful inde This new new with now put and control refer not observed in near pendence, and compel him to decorate some conspicuous portion of his 2011, during with her name and port in three-inch letters. If imagine the small yacht owner would be better pleased with no law, and give up the so-called "benefits of enrolement." Howlaw, and give up the so-called "benefits of curolement." How-ever, provided the part relating to the name of port were stricken out the new law will doubtless prove a benefit and an improve-ment on the old one. It is a great pity that Mr. Townsend did not also embody in his bill a clause exempting yachts from com-pulsory pilotage, and if not too late it might be done now. Cossi-wise vessels are exempt: but suppose we cruise constwise to Savannah, Ga., thence to Bermuda, thence to Fernandina or Key West. On entering say Key West, which is as easy is do without a pilot as "rolling off a log," a pilot halls you; you refuse his offer of midutage, veryou are obliged by law to my for a service you of pilotage: yet you are obliged by law to pay for a service you of pindage; jety out are onigeneasy as we pay for a service year do not want, and that has on been performed. I know of an instance water as welves a know for an instance water as welves a know for you know for the property of the pay of the property for what was taxed to have been so being obtained to pay dearly for what you don't want and don't got lei too pain pable one and you further illustication.

Mr. Pownsond's bill is the effort of a true sportsman to assist and manly sport, and if not too late he will without doubt he can to improve what he has so well begun. Any suggestions to this end from yachtsmen would probably receive attention they deserve from him, for if a bill is to be passed for the benefit of yachts, all yachtsmen must be interested in having

the beneal of yacutamen muss of uncreased in having it cover the ground thoroughly and satisfactorily.

In regard to the present form of yacht licenses we are obliged to procure from the Custom House a yearly renewal. The Seawanhaka Yacht Club is about forwarding to the Secretary of the Wanniag thou standard to the want yacht clubs in all parts of the country, asking that a yachting license extend during ownership, and when a yacht is sold the new owner to give bond and take country, asking that a yacating needse extend during ownership, and when a yacht is sold the new owner to give bond and take out his license to extend during his term of ownership. The re-quirements of the law will be quite as well fulfilled by this nethod as by the old way, and yachtsmen be saved an immen-mount of trouble and bother every year. O. E. CROMWELL, amount of trouble and bother every year.

The probabilities are that the common nuisance of "compul ory pilotage" will be abolished, ld, dried-up harmon There is no reason why a set of sory photage. Will be abousted. There is no reason why a set old, dried-up barnacles should fasten themselves as beneficiar upon the community because they happen to be pilots any mo than a set of cobblers because they happen to peg leather. The many pilots for the business, and their charges are outrageously, heavy. American commerce, and is purely class legislation. Foreigner justly surprised that we submit to the exaction of such

HEMP OR WIRE?

Editor Forest and Stream:-

Editor Forest and Stream:—
This being a slack time of year with yachtsmen, and consequently the best season for the interchange of opinions, I avail myself of your kindness to us brethren of the wave to moot once have the fort discussed question of hemp ersus wire for the strongs of yachts. I may premise that I have tried both, but constituting with the production of the sheeping that the production of the sheeping that the production of the sheeping that the sheeping the state of the sheeping that the sheeping the sheeping the sheeping that the sheeping the sheeping the sheeping the sheeping the sheeping the sheeping the sheeping that the sheeping the sheepin fess to being still undecided as to the absolute merits and de tess to being still undecided us to the absolute incrits and de-merits of clither. There has been a great deal written on the sub-ject, and where Jearned authorities so widely differ, I do not pre-sume to offer an opinion. I will merely ask the many practical yachtmen who read your paper to contribute their share of in-formation. I am much interested, both as a critising and racing man, in litting myyacht in the most perfect manner, and what I

want to get at just now is the experience of men who have made

and to get at use now is the experience of men who have omparative tests of the value of hemp and of wire shrouds. Of course, we all know that wire shrouds are stronger in ortion than hemp, and can, therefore, be used of much less stronger in 1 inch wire rope being equal to 21-inch home only half the sense were rope being equal to 32-mea morp only and the weight per fathom. There is, then, a decided saving in weight aloft, and, swing to the reduced size, a diminution of wind-drught—two important considerations. The rigging can also be under neater—a point worth noting. But—there is a "but"—wire requires to be set up taut, or it looks sloven[y; and slovenlines. is finadmissible on a yacht. Hemp shrouds, on the other hand, while heavier and catching more wind, require to be set up very much offener, and indeed must be looked after constantly, as they stretch and take up a great deal, according to the weather. is a decided disadvantage to the Corinthian, who, perhaps, keeps but one paid hand, and in this respect wire is more likely to give satisfaction, not stretching nearly as much. Now, the elastici of hempen shrouds, it is claimed, is of great value as a help speed, as it prevents the binding up of the boat, while the wire ties her up, unless the lanyards are made very long to compensate for the loss of elasticity, or spring or india rubber relievers ed for the same purpose. In conversing with seame at consensus of opinion was, I found, in favor of rigging for speed-a conclusion diametrically opposed to the ther axiom that the flatter the sail the faster will the yach travel. Personally I incline to wire rigging set up taut. I know this is almost heresy, but, authors to the contrary nothwithstand-ing, it seems to me that unless the mast is made so stort as to bear up under the strain of the sail without buckling—as is the case of some of the Newfoundland fishing boats-well set up ioring is absolutely necessary to obtain flatness of mainsail rigging is absolutely necessary to obtain natures of mainsail. I hink it will be found that the advocates of slack rigging have their yachts' masts pretty stout, and consequently heavy. Brett, in bis "Notes on Yachts," devotes a whole chapter to a comparison of hemp with wire, and decides in favor of the former

on all counts, having evidently a strong prejudice against the latter; but since Brett's day a deal has been learned about wire rigging, and its use has become much more general than was an-ticipated. "Vanderdeeken," in his "Yachts and Yachting," long a standard work, and even now a most useful book of refere a standard work, and even now a most assent book or reference acknowledges the splendid performance of vessels fitted with wire shrouds, while voting for hemp in a "weak-built vessel, whose hull works and springs even moderately," Marcti does not touch on rigging in his book, and Frazar's "Boat-Sailing," the only American hand-book on yachting that I know of, also passes over American tandows of securing that I among a second of the subject in his valuable "Yacht and Boat-Sailing." He quotes Mr John's report to Lloyds, on the dismast'ing of ships, in proof of wire-rigging set up taut, and of the considerable stretch of wire At the risk of being lengthy I quote his words, as his book of, though it should be, in the hands of all your readers may not, though it stoum be, in the minds of all your readers. "So far as the requirements of match sailing go, there can be no foult that the more rigid the rigging can be kept the better are the results. The old-fashioned theory is that the rigging should the results. be very elastic, and that the masts should have plenty of play he very ensute, and that the masts should have plenty of pay. This curious fallney has been maintained by still more curious arguments and theories; and we have known some sailing-masters to slack up the rigging to give it the required clasticity. It is obvious that the mast would have to supply the clusticity under such circumstances, as the strain would not come upon the rig. ging until the mast had been very considerably bent—perhaps at most to the breaking point. We need not dwell upon the bad effects of slack rigging and a yielding mast further than to say that anything which tends to render the application of the propelling force intermittent, or to absorb any portion of it and re luca its effect, must in some measure detrimentally influence the ance its effect, must in some measure detrimentary influence speed of a vessel; and if rigid rigging is necessary for the go-performance of sailing ships, it is equally necessary for the atta-ment of the highest results in competitive yacht sailing."

I might fill a column-only you would not thank me-with in-stances of the reported good effects of slacking up the rigging in a ruce. It is only the other day that, discussing the point with a friend, whose yachts are noted for their speed, he told me he always slacked up his shroud lanyards before starting ha race, and this with Russian hemp shrouds. At this rate I do not see what the shrouds are there for, especially as I know his masts are very the strongs are the refer to, especially as I alone was massed are ref-stout in proportion to the size of his crafts. But I am open to conviction, and during the coming season I shall endeavor to test carefully the advantages of slack rs. And rigging, and meantime should be glad to hear what others have to say on the subject.

We incline to the opinion that there is nothing in slack shrouds, but prefer setting them up taut as a bar. The idea of slack shrouds should be classed with bellying sails. There is no danger in wire being set up "taut as a harpstring," and there is nothing like turn-buckles of large thread to do it with, in place of the everlasting trouble of casting adrift lanyards to get a pull on them, and then lose all you gained while seizing them off, leav ing shrouds in a bight worse than before—an operation we have witnessed more than once. There is danger, however, in setting up hemp like a bar, especially with light rigging, for when wet it will shrink and either buckle the mast, draw down the deck about the partners, lift the sheer or telescope the houndband. The trouble with hemp is, there is more stretch than elasticity to it. Practice seems to indicate strong preference for wire, as in these waters it has about superceded hemp altogether for yachts of all tonnages.

MEASUREMENT.

Editor Forest and Stream :

Let me briefly state my reasons for (so far as I have investiga-ted) believing that the cubic contents of the circumscribed par-allelopipedon of a yacht's bull are an adequate and fair measur-of her capacity in comparison with the same cubic contents from any other yacht. No vessel ever exceeds in cubic contents 70 per it, of the cubic contents of her circumscribed parallelopipedon cent, or the entire contents of her architectured particlephysical and no vessel cent has less than say 40 per cent, of it. For yaching purposes no vessel can vary more than about 10 per cent, of it, and I don't whether, practically, our modern yachis yary more than 5 per cent, taking into account the necessities of structure which are found to be ossential to speed. Ispeak, of course, of chts. And the same is true of center-board yachts com pared one with another. Fractically, therefore, the tents of the parallelopipedon is in a certain ratio to contents of its yacht in all cases, because he who departs from that ratio is put out of hope of competition. Hence, as all "cubic contents" measurement is but an approximation to the actual

cubic contents of the yacht, length, breadth and depth will practically give about as near an approximation with those of modern build, since it makes no difference in comparing two yachts whether we adopt the actual cubic contents, or the cubic tents of larger solids which bear the same ratio to the actual of

Again, looking at it in another way, length is a factor of power and speed, breadth is also a factor, depth is also rator of power and speed, breadth is also a factor, depth is also a factor, demons sense says, estimate all the factors in comparing one with another, such allow the buller to make use of all other dimensions within those factors as he pleases. These three factors are necessary and fixed. All others are arbitrary and optional. The natural laws which govern naval architecture will compel a certaking have wine a govern man irrentecture will compute a certain approximation to uniformity between them to subserve the best of the builder once he free to find these proportions of the properties of the proportions of length, breadth and depth to meet some jeckeying rules, and we shall see our builders turn their attention to those proportions of shall see our builders turn their attention to those proportions of shall see our billious term there which will lead to true propertions of form, aside from those, which will lead to true progress and improvement in naval architecture. So much for my present progress in the study of the subject. Finally, the measurement which includes the three dimensions. If not absolutely portect, is so fur ahead of all others as to leave them out of the ou

DAVID HATT BYCE

MOTORS FOR LAUNCHES.

Editor Forest and Stream :

A short time since, a street car made a trip over the Third avenue line of some sixteen miles with the usual load of passen-gers and making the customary stops, propelled by a pneumatic engine with but one charge of compressed sir. Why could not the same means be used in operating small steam-r launches, thus doing away with all smoke, steam, coal-dust and

launches, thus doing away with an smoke, steam, cont-aust and danger of explosions?

The air compresser could be located at a convenient place on the docks, and the boat call for a charge when wanted.

CONSTANT READER

THE CANOE CONGRESS

THE call for the Canoe Congress to be head at Caldwell, head of Taken for the cambe conjects to be mad at Candwen, nead of Lake George, August 3d, 4h, 5th and 6th next, states that it reposed to organize a National Canoe Convention, that dub, the membership of which shall be composed entirely of idents of the United States. It is also stated that English and Canadian canocists will be invited to attend, with their canoca as Canarian canocists will be invited to attent, with their canocis, aguests. It has been suggested, and with good reason, that the proposed organization is bould not be exclusively a United States canoc club, bould be, in the broadest sense, The American Canoc Association, to membership of which any canocist, behove the state of Canada, United States, or Mexico, ist, on e.g., or suc, residents of candidat, United States, or Mexico, shall be eligible. There is certainly no reason for excluding our Canadian cousins; they are canoeists to the paddle born and they can be counted by thousands. They are cruising canoeists and can make valuable contributions in the way of cruising notes to the canoe paper that it is proposed to publish. I am assured that the canoeign continues in Canada, who have been consistent. that several gentlemen in Canada, who have been consulted amm several generation in Catalana, who may be been consusted warmly second the move for the American Canoe Association, and that many Canadians will attend the congress. Such an association, it is confidently believed, may be formed with a membership of at least 250. In the United States the double-bladed parts dle is generally used; in Canada, the single-bladed. Canoes are is generally used: in Canada, the single-based. Canoes for one person are as rirely seen in Canada as canoes for more than one in the States. These differences and the great variety of models in this country have brought out the questions as to what constitutes a canoe and as to what the classification should be. The division into satting and padding canoes is established. The definition of the word cance has been referred by Mr. N. H. definition of the work came mas been referred by M_i , N_i , H_i . Bishop, acting as secretary to the signosts of the call, to the commodores of the three came clubs, and they have spread that: "A came is a boat that is sharp at both ends and not more than B_i -in, beam. She must be a craft that may be effectively propelled by a doubtle-bladed patidle, and she may be propelled either by the single or double-bladed paddle, or by one or more sails. No ans of propulsion can be used."

means of propulsion can be used."
The question, "what is a cnone?" is frequently asked, and fo that reason this definition has been given. There is no reason why canoes may not be sailed or paddled by one, two, four, or eight men, nor why there should not be single and double paddle sees. So long as the craft is a cance, and the conditions time for each contestant, it matters little what the co

YACHTING NEWS.

NEW JERSEY YACHT CLUB .- The annual meeting for the electhey raises of the New Jersey Yacht Club was held last even-ing at their club louse, foot of Eleventh street, Hoboken, which resulted as follows: Commodore, W. H. Dilworth; Vice-Commo-dore, A. Jeannentt; Recording Secretary, Geo. Gartland; Treas-uer, Chas. Rogers; Financial Secretary, Ed. Ketchm, Jr.; Cormer, clais. Rogers, claimical Secretary, Ed. Retenam, Jr.; Corresponding Secretary, Paliner Campbiell; Messuret, Harry Tchanan. Regatta Committees (eo. Gartiand, Frank Dilworth, John Peters, Trustees: Ketcham, Dilworth, Rogers, Jeanneutt, Tchanan. Delegates to National Yachting Association: Theo. Rogers, E. Ketcham, W. H. Dilworth. The annual reports of the officers for the past year exhibit a very flourishing condition. the past year exhibit a very hoursaing condition. The treasury shows a handsome balance in its favor. The members are harmonious and social; the club house is large and commodious, and beautifully located on the bank of the fluxion in the Blysian Fields. The membership comprises about forty gentlemen, most of whom are engaged in business in New York and Hoboken. They are, with scarcely an exception, ardem lovers of the sport, and by just claims to seamanship of no ordinary character. They and my just cannot be scannars my or no occurry carefully own no very large yachts; but among the squadron of open boats, varying from sixteen to thirty-six feet in length, may be found some of the fastest and best that ever floated in New York Bay. The Constitution and By-Laws were carefully revised some time since, and have just been issued in neat form, a copy of which uld be cheerfully furnished by the Secretary to any gentleman o might desire to join the club.

THE N. J. Y. C. is in reality the oldest Corinthian yacht club in country, having adopted limited crews and fixed ballast since It should receive the support of all amateurs in its neigh-

borhood.
SALUM BAY YACHT CLUB.-Commodore, Wm. G. Saltonstall SALDN BAY YACHT CLUB.—Commodore, Wh. C. Salto sloop Arladne, Salem; Ylce-Commodore, Wm. P. Parker, sch Creel, Salem; Rear-Commodore, David H. Rice, schooner Cap, Lowell. Directors: President, Henry A. Hale, Salem; chester Smith, Boston; Frank A. Brown, sloop Coquette, Salem; I. W. Dodge, sloop Mignon, Beverly; E. Lamson, sloop Coming, Lowell: Treasurer, Geo. W. Mansfield, sloop Dolphin, Salem : Secretary, Chas. W. Richardson, Salem: Measurers, Joshua Brown and W. T. Servy. Regatta Committee: C. A. Benjamin, E. C. Browne, E. B. Dudley.

NICEREGATTA.—Owing to the unfortunate prevalence of the counsels of landsmen in the arrangement of the races, the entries were rather meager for the liberal prizes offered, and only a beterogeneous lot of big and little were found willing to start Thursday, March 11th, in what ought to have attracted the flower of the world's racing fleet. Englishmen were naturally disguisted with the idea of subordinating sport to the gratification of une grande foule ashore, and so the races lost in east and degenerated prame place issuers, and so the races has in task into degenerates somewhat into une grands spicefred for the hotels and floating population of the pretty little French scaport. It is always ob-jectionable to mix rowing and sailing races. We have learned something of late in America, and the menageric features are no longer disproportionately prominent at most races. Our French cousins will have to learn as we did, by experience, that a circus and a yacht match are two different things and won't mix.

Vox Populi.-From the letter of a well-known yachtsman we extract the following as a sign of the popularity of this jour-nal and the high estimate assigned it by its constituency drawn from the highest social ranks:—"The time has quite gone by when FOREST AND SZIRAM required testimonials of its value. I am glad to say it is becoming more popular every day, and nothing is more remarkable than the success of its yachting columns one the American Field, and a higner compliment l could not pay it.

could not pay it."

The Canix Locker.—Blacking for tarpavlins: Eight pounds black paint, well ground, one gallon tinseed oil, one pound beeswax, one half pound itharge and one pint spirits of turpentine. Spurs: Scrape thoroughly, sandpaper and apply Cocket's spur composition, late on thin, Illing shakes and seams with "wood filter," to be had of leading paint houses. Ground coats: There is nothing like lead color for the jurpose. Put it on thin, so that subsequent coats can dry.

Yacht clubs can join the National Association on the same terms as those now participating any time before the meeting of April 14th. After the constitution has been ratified, their admission will be subject to a vote the assent of a majority of the clubs being necessary to admission.

NEW PUBLICATIONS.

THE ILLUSTRATED BOOK OF THE DOG .- By Vero Shaw, B. A., Cantab., Assisted by the Leading Breeders of the Day, Illustrated with colored plates drawn from the life. New York: Cassell, Petter, Galpin & Co., 598 Broadway. Complete in thirty parts: price, 40 cents per part,

parray; price, we come per part.
The Cassells have added to their large stock of books valuable to the sportsman, this mot excellent work by Mr. Vero Shaw, whose extended experience as a breeder and exhibitor of dogs, amply qualifies him to write about them in an eminently authority. tative manner. From an examination of the eight parts already issued, we are warranted in speaking very highly both of the author's method and of the admirable way in which the plan of the book is carried out. The earlier portions of the book rightly deal with the fundamental and elementary details of kenneling and general management, and then take up the various topics of rearing, breaking, working, feeding, exercise, dealing, judging, buying and selling, grooming, hygiene and diseases. In each one of these branches the reader will find full and explicit instructions, written in a plain, straightforward way, and in a style de-

void of cockneyism and familiarity.

The various breeds of dogs are described, with instructions for the care of each, points in judging, etc.

The illustrations are numerous, being portraits of typical dogs,

The illustrations are numerous, being portraits of typical dogs, taken from the life. Of the colored plates we cannot say much, the book would be much more pleasing without them. The woodcuts, on the contrary, are generally excellent and all that could be asked. The book is hand-somely printed, and will, when completed, form a volume which all breeders and dog owners may protitably add to their bibaries. We are always glad to see a firm with such unlimited resources as those possessed by the Messrs. Cassell, Ferter, Galpin & Co., devoting themselves to extending the public information in respect to our animal friends.

Van Nostrand's Engineering Magazine for April has its customary excellent selection of material. Leading off wit a theoretical investigation on the "Strength of Retaining Walls, Leading off with a theoretical investigation by Wm. Cain, C. E.; then quotations from the leading engineering journals on "Compound Armor," "Sanitary Construction of Dwelling-houses," "Bridging Navi-

gable Waters of the United States," "The Panama Canal from an English Point of View," "Engineering Progress During the Last Fr(ty Years," the timely subject of "Dynamo-Electric Machines," and much general news, this magazine affords an excellent index and review of the principal transactions in the engine cering world.

THE TAXIDERMIST'S MANUAL .- By Capt. Thomas Brown,

F. L. S. Twenty-eighth edition. New York: G. P. Putnam's Sons, 182 Fifth avenue. 1879. In issuing an enlarged and improved edition of this standard ork the Putnams have added a useful and valuable contribution to the extensive interacture of the subject. Taxidermy is an art which is constantly gaining now popularity among amateur students of the several various branches of natural history, more especially among students of to ornithology; for the birds are the especially among students of ornithology; for the birds are the favorite sublects of out-of-door study. The first edition of Capt. Brown's book was published many years ago, but the directions contained in the volume before us are by no means uscless because of this. In 1819 the author was sent by the Edinburgh University to inspect the splendid nuseum of Mons. Durtesne, clief of the preserving department of the Jardhi des Plantes, Paris. of the preserving department of the Jardin des Plantes, Paris. The intimacy then and there formed with M. Dufresne afforded ample opportunity for Capt. Brown to learn all the practical details of the different processes employed in the preservation of animal specimens. To the knowledge thus acquired were added he fruits of personal paractical experience, and the result is the manual before us, which now having reached its twenty-cishth edition way, be call thouse fairly acquired a place in the taylors. edition may be said to have fairly earned a place in the taxider-

The eight chapters treat generally of skinning and preserving quadrupeds, birds, reptiles, fishes, and spiders, worms and in-sects; preparing skeletons; the manner of collecting different animals; recipes and directions for the various articles used in taxidermy, and lastly of instructions to travelers.

"Krick's Guide to the Turf" is a manual which is

absolutely indispensible to horse owners, and those who are in-terested in the turf. Its author and publisher, Mr. H. G. Crick-more, of the World, has a wide reputation for the accuracy of his information on all turf matters. The book is published at No. 25

PUBLISHERS' DEPARTMENT.

Brown's Gun Cleaner has been recently tested by the officers of the United States Regulars at Fort Steele, Wyoming Territory, and recommended to the Government for adoption by the army.

[From Hon. Andrew Cornwall, ex-member Legislature, New York State.]

York State.

H. H. Warner & Co.:—Gents—I have been troubled with kindney difficulty for the last three years, and in October last had a very severe attack. I then commenced taking your Safe Kidney and Liver Cure, and obtained relief at once. I have used two bottles, and feel as well as ever, and I shall always keep a supply of Warner's Safe Kidney and Liver Cure in the house.

Yours truly,

A. Cornwall.

—Among the notable manufacturing establishments of New York is that of Keep's, the manufacturer of Shirts and Gentlemen's Furnishing Goods. Some years ago Mr. Keep devised a method of supplying people with partly-made shirts, that is garments which are all cut and ready to be sewed together. Thus, by reducing the cost of what are substantially wholly-made shirts, proved a most successful business undertaking. Keep's partly-made shirts are now sent to every State in the Union, and from a single salesroom on Broadway the manufacturers have moved into a large building, which is now entirely occupied by the various departments. There is nothing so satisfactory in the shape of dress as a well-fitting shirt. Keep's shirts fit well and wear well. We can heartify endorse the man, the shirt and the way in which he does business. -Among the notable manufacturing establishments of

HUNTING THE ALLIGATOR.—Kingston, N. Y., March 2d.

—From what I had read of alligators I was led to believe that they were exceedingly dangerous, but closer acquaintance has dispelled that illusion. I now regard them as thorough cowards, except when they are defenging their young or are met with when on their land journeyings; then they are dangerous, and must be approached with caution, keeping the line of retreat open

in case of emergencies. The best alligator hunting is found in lakes and creeks where they have not been much disturbed. Such places can be found almost everywhere along the 8t. John's River, Florida, within a short distance of hotels and landings. Good sport may yet be had on the 8t. John's River itself by hunting from land instead of water. Almost any deep cove remote from the steamer channel is good ground, and the morning of a warm sunny day is the time. The proper weapon is a .40 or .44 sporting rifle. I have been most successful with a .44 rm-fire, using the long cartridge. I have killed a fifteen-fooder stone dead at .50 yards with the short .44 cartridge. I have used a .50 caliber rifle, but the lighter rifle will kill just as many and is much the most pleasant in use. When the alligator is floating on the water the eye is the most prominent feature and is the only vital part. When on land or lying on logs a shot behind the fore leg will be effective. If a "igator" is shot in deep water he sinks and is lost. The skinning of a "igator" is a difficult task, especially if the capture be a large one; but the neophyte generally wishes the skin of his first "igator" as a troply, and can obtain it by making longitudinal cuts from the head to the tail on each side, just under the large bony plates of the back, then cutting a slit down each leg to connect with the cuts on sides. Commence stripping at the tail. The skin may be preserved by salting and drying. Small alligators may be skinned without trouble. If the head is buried a few inches in the earth for a week the teeth may be extracted without from the other hands of the tail on each side is similar to the bellow of a bull. "To produce their music they sit upon their bind legs, support the body in an creet position with the aid of the tail, open the mouth to ist greatest capacity, and vocalise their amorous lays. Alligators as pets. A tub of water with a stone in the center for them to crawl on makes a good home. For food a few minnows or a little raw meat,

A BEAR DOG IN A CAGE, -Messrs. Chas. Reiche & Bro. of this city, recently received from Berlin, Prussia, the wild beast belonging to an exhibitor, who recently died in that city from injuries inflicted by a royal Bengaltiger. Among the animals thus received were some unnaturalized Polar bears:

It is known that the mere presence of an animal in a This known that the mere presence at an animal must cage of others of different species, no matter how savage or wild they may be, will sometimes provent them from fighting. Why this is so animal tamers can offer only theories in explanation. It is said that tigers and lions in the jungle will run from the presence of a dog as lions in the jungle will run from the presence of a dog as they do from that of a man, unloss presend by hunger or standing in defense of offspring. Mr. Rice, before his death, as an experiment, and without much hope of success, introduced a large dog, a cross between a mastiff and the bull-terrier, into a cage containing two entirely untamed Polar bears, and a Russian black bear. The effect surprised him. The dog instantly asserted a mastery over his companions, although any once of them could have killed him in two minutes. He seemed to feel the necessity of preserving the upper hand, and of not letting any one of them imbrue his teeth in warm blood. As soon as trouble threatens, the peacemaker has but to show his teeth and growl in order to restore harmony. Mr. Reiche says he does not know of any other case where the native fierceness of a Polar bear has been quelled. Mr. Reine says no does not know of any other case where the native fierceness of a Polar bear lias been quelled. Mr. Rice, before his death, used to enter the cage with this happy family and perform with them, though he did not dare to do so before the dog was introduced. The lour brutes traveled in the same cage across the Atlantic

A SWE do not employ any authorized agents or canvassers, we offer our friends in every locality who will give any time or attention to collecting and forwarding subscriptions, the following inducements to obtain subscribers for the "FOREST AND STREAM" at the rates and commissions given below: Collect Subscription price, 3 months, \$1.00 Commission to be retained, 3 ".25 6 months, \$2.00 .50 1 year, \$4.00 1 " 1.00 2 years, \$7.00 2 " 1.50 3 years, \$10.00 3 " 2.00 1 " " \$5.50 Amount to remit us, 3 .75 6 \$1.50 \$3.00 2 \$8,00

Condition to the above Commissions, we offer the following CASH PREMIUMS:

To the person sending us the largest amount of money obtained from new subscribers, whose names are not now on our books, at above net rates, between January 1, 1880, and July 1, 1889.

To the one sending the next largest amount, in accordance with the above conditions,
To the third on the list,
And to the fourth,
Sample Copy, Subscription Blanks and a handsome Show Card (to be posted in a conspicuous place) sent free on application. $\begin{array}{c} \$100.00\\ 75.00\\ 50.00\\ 25.00\end{array}$

Subscriptions may begin at any time during the year, and may run any length of time, but no subscription will be entered on our books until the money for the same has been received at this office.

No commission will be allowed on the first SINGLE subscription, but the commission due on the first two subscriptions may be deducted from the second, and thereafter the commission can be retained on each succeeding subscription. You are sure of the commission which you retain, and also have an equal chance to get from \$25 to \$100 of the cash premiums in six months.

To any Person sending us before July 1, 1880, two new subscribers for one year, or four new subscribers for six

Months, and Eight Dollars Cash, we will send, in place of commission, any one of the following Articles:

Jordan's Manual of Vertebrates.
A copy of Fonest And Stream for one year.
A three-piece double-ferule, lancewood tip, full mounted, polished Bass, Trout or Balt Rod.

Cougs' Field Ornithology.
One Fishing Outfit, consisting of Rod, Reel, Line, Snells and Arrows.
One Pashing Outfit, consisting of Rod, Reel, Line, Snells and Arrows.
One pair Club Skates.

To any Person sending us, before July, 1880, Sixteen Dollars cash, and Four New Subscribers for One Year, or Eight new subscribers for six months, we will send, in place of commission, any of the following Articles: $A\ good\ Fishing\ Outfit,\ consisting\ of\ rod,\ reel,\ line,\ hooks\ |\ One\ Gent's\ six-foot\ self-luncewood\ Bow,\ made\ to\ weight,$

Two copies of Forest and Stream for one Year. A four-piece, double ferule, guides and reel-band, hollow, butt, extra tip, full mounted, Bait or Brass Rod. One 3-piece do. Fly Rod.

or flies and snells. One full-length Fly Book, and two dozen assorted Flies. Coues' Key to North American Birds,

and one dozen half-notched polished Arrows. One Set Parlor Archery, complete in box. One pair nickled-plated Club Skates.

One Parlor Air-Gun.

Write your name and the name of the person to whom the paper is to be mailed, plainly, and do not forget POST OFFICE ADDRESS, TOWN AND STATE.

Remit, if possible, by postal money order, check, or draft on New York, payable to order of Forest and Stream Publishing Company. If neither money order nor draft can be obtained, inclose money in Registered Letter. Addresss

A Day in the Woods.

SECOND PAPER.

T was unreasonably early the next morning when Henry awoke me out of a short but peaceful slumber. Indeed, so soundly had I slept that scarcely did it seem half an hour since we parted, and left the few smouldering embers dying on the hearth below.

"It's four o'clock," said he. "You 'rouse the boys. I'll leave the candle here lighted, and there's water in the crock. I'm going down to prepare the coffee. Collect your wits, Harry, and make haste. Oscar will not lose three minutes waiting for us."

I thought he still lingered within the small attic room when I had become conscious enough to answer him, but he had slipped out with the stealth of an Indian. Though Jack Lary, Nevill and the mil! yere yet fresh in my dreamy mind, quail shooting, which was to be the sport of the day, was the one thought prominent. Aye, there stood reclining the London double twist, and dangling from the muzzle could be seen the quaint powder-horn and shot-belt, and there, too, hung the short, cozy velvet shooting jacket and the cap staring me in the very eyes from all portions of the room.

Showly raising the little dormer window until it caught the funder. The first crescent of the moon had wasted for

Slowly raising the little dormer window until it caught the button, I peeped out into the darkness: it was still as death. The faint crossent of the moon had waned far to the westward, and was slowly sinking behind the woods; a few stars yet glimmered in the heavens, and below my window, (which was even so miniature as to afford scarcely a scant observation) lay Thompson's Pond, as placid as a mirror. Nor can I expel from this phantom-like recollection, for I get it even now—the dank, odorous breath of that autumnal dawn, as it lingered yet awhile ere it gave birth to another sun to to shine upon a beautiful world.

"Come, boys, look lively if you mean to have a good day's sport. You'll feel more like sleeping to-morrow morning. Thorpe's up this half hour, and the coffee has sent its aroma all through the house. There, I've lit your candle for you. Come, Bob—come, Charlie, jump up, Nowey more property of the prop

sent its aroma all through the house. There, I've lit your candle for you. Come, Bob—come, Charlie, jump up, will you?"

A few hasty moves placed the trio in quite a respectable appearance, for hunters, and with coats and other accountermonts under our arms we repaired to the room below, partook of a light breakfast of coffee and biscuit, and then not leaving on our own accord, but actually chased by this same Henry out through the back door out into one of the blackest mornings I ever saw in all my life. We left like the Tenth Russars under Lord Cardigan, i. e., one arm in a sleeve.

gan, i. c., one arm in a sleeve.
"Uncouple them crazy hounds, Fen," said Henry:

they haven't ceased howling since they saw the light in the window."
"I'd like to know if the poor beasts are as crazy as you

"they haven't ceased howling since they saw the light in the window."

"I'd like to know if the poor beasts are as crazy as you are, to bring a chap out this time of the morning to shoot. Where have you the unfortunate devils, anyway?"

"They're beyond there in the corn cribs. Just whip out the pin from the staple, and you'll see them."

Scarcely were the directions from his lips when I let out the dogs, who, hungry as hyenas, ran wild everywhere, and finally finding the gate on their hook, got out into the road, and were everything but manageable.

Knowing the affair to have been a concocted job, I let Henry laugh to his heart's wishes, and walked silently across the lot to Ocarr's shanty, where the low, dismal ficker in the eight-squared window gave evidence that that worthy was up and astir, and upon entering we found him endeavoring to forage for himself and dog. Surprised indeed was he at our inopportune visit.

"You see I have to feed the whole barn-yard before I can go qualiling. I reckon you chaps slept precious little last night. The Wilson's ain't got around yet, either, cause it's too early. "Twon't be light enough for a whole hour to come, 'less it happens that you fellows want to murder the dear little creatures in their beds. And even at that, I'll bet all I shoot this season ye's couldn't find one of them. Yes, dark for an hour yet," and he raised the window to substantiate the truth of his assertion, at the little reatures in their beds. And even at that, I'll bet all I shoot this reason ye's couldn't find one of them. Yes, dark for an hour yet," and he raised the window to substantiate the truth of his assertion, laterial at him and sing the precious little last a him and sprovender beside the hearth. But that "good dog," lie continued, placing a tin pan containing that animal's provender beside the hearth. But that "good dog," lie continued, placing a tin pan containing that animal's provender beside the hearth. But that "good dog," lie continued, placing at him pan containing that animal's pr

"Like parting friends who linger while they sever, Enforced to go, though seeming still unready."

Highly pleased at having such a companion, I well knew that the only part now left for me to play was to shoot. Whether I should do so indiscreetly in the excitement of the moment, or cool and collectively aim and kill to a certainty, was a question solved only when the time came.

"He's got one; casy; I ll flush the bird," whispered my companion, and they rose to my utter mortification. He smiled at my waywardness of shooting too quick, in doing which I did not ruffle a feather. He scored his bird handsomely—a fine, well-matured cock-quail.

"No great or uncommon coincidence, that one naturally timid should miss the thirs shot of the season, Oscar, cansidering the game, too—a bird who, rising with such a startling wing, is a put to throw the shooter in a quandary. They are, in my opinion, the most difficult bird to kill at that."

"Oh, no, no, Harry. A grouse is fifty times more dif-

"Oh, no, no, Harry. A grouse is fifty times more dif-

*They are there now—three extremely tall, dead poplars, which have stood unmovable since the days of the Noyack Indiaus, and which have refused to succumb to the wild, sturdy northwesters of many wildters.

ficult to stop, and when you get in the timber lands tomorrow you'll remember every word of what I say; and
as for myself, I consider quail shooting child's play to
that of stopping a grouse instantly, for that is the way
to do it. Now 'keep cool,' as Bob continually says, and
you'll get the next one sure; the place is alive with
them. Did you count that bety?"
"Count them? They might have been a flock of one
thousand for ought I know; but I'm loaded, and let's
move on, though I expect to go reeling at my next shot.
I poured the pellets into this burrel regardlessly."
But the dog was gone, and despite the numerous cries
for "kink, Rink," and whistles without number, it took
us some minutes to find him; and actually there he was,
like a cast statute, dead on a point—a skirmish on his
own hook.
"I'll warm him for that," whispered Oscar, in the

own hook,
"I'll warm him for that," whispered Oscar, in the
same breath ordering my position, which I took beyond
a tall cedar. They rose, and again I missed, and again a tall cedar. he scored one.

a tall cedar. They rose, and again I missed, and again be scored one.

"You get that bird, Fen. See it over there? And come here, kink." The dog curled his beautiful tail between his legs and gave a backward look. "Here, I say, Will you, will you, will you ever do that again?" and as he laid heavily the chastisement upon the wayward and skulking brute, a series of howls rent the woodlands far and wide.

"You should have called him from the point, Oscar, and chastised him there and then; he does not know now, exactive why you flogged him."

"Yes, that would have been the better way; but I don't think at all times—charge! you reckless villian; lie down there! I've taught him better than that. I' used to let him flush the birds himself, but had to break him from the habit on account of his chasing them so.

till the down there! I've taught him better than that, it used to let him flush the birds himself, but had to break him from the habit on account of his chasing them so, him from the habit on account of his chasing them so, He'd run a mile at times, as if the very devil was in his wake. Charlie's dog Tip inherits the same traits from its mother. The first day I had him up here to break, I thought actually, when I fired the first gun, that the fool had run clear back into Kings County."

"Gun shyness, Oscar. The next dog you have to break, and you discover any symptoms of a similar timidity, just lash the animal to a cedar—out here upon the grounds where you intend to teach him—and waste a dozen shots or so over him, and I'll guarantee a speedy cure."

the grounds where you intend to teach him—and waste a dozen shots or so over him, and I'll guarantee a speedy cure."

"I shall really try the scheme, Harry, but George's dog, Major, did that art most beautifully—the very finest I ever did see it done. Did you ever see Major flush a bird, when George would say 'whist?"

"Yes, I witnessed the event many a time last autuum, and was struck with the beauty and thoroughness of that animal's education. I like that acquirement in a dog; but the great trouble is that few dogs can be taught the trick; and then the accomplishment, to be permaent, necessitates the whaling of half the life out of the poor brute. By the-bye, where did George get that dog?"

"Some one gave it him. It was but a common mongrel setter; but Oscar, such a dog. George had him educated up to the teeth—the effects of his overflowing kindness, I'll wager anything."

"Do you really believe so? I have an idea; and, as for me, personally, I should not desire a dog whose ancestors could be traced back to the flood, or, beyond that, as some dogs are, so long as he was a good dog, and could out-tramp me. And do you believe Major's death was an accident, or an outburst of George's temper?"

"Ah! yes, Harry, purely an accident, if ever there was one. George never got angry in his life, to such an extent as to be driven to do any such desperation as that, Not George; he would not have parted with Maj, for his weight in gold; indeed, he feels quite sorry about the affair. You should have seen his interment up in the cook's lot, right where the wigwam was burned, Harry, that's where he lies."

"Well, there are some dog's qualified for the acquirement of no one possible art. In fact, the only thing that can be driven into them is a load of shot, and that's the

that's where he lies."

"Well, there are some dog's qualified for the acquirement of no one possible art. In fact, the only thing that can be driven into them is a load of shot, and that's the end of them. It was the queerest accident I ever did hear of, and doubted it at first, George made me laugh so with his drollery; but he's one of the best boys in the world, take him all in all."

"Well might you say so, Harry, and he's often—"

"Hold! Rink has a care, are you ready?"

I nodded in the affirmative and fired simultaneously. From a bery of perhaps a dozen, one dropped to my left quarter, and two succumbed to the deliberate, steady and inserring aim of my companion. I had my bird in my hand long before the dog could have hoped to mouth him; and as he lay there liteless, a beautiful cock-qualit, with a patch torn from his side, from whence the blood trickled and clogged upon his, alas! forever helpless wing, a feeling of regret stole o'er me.

"Did you get him?" inquired my friend, after the dog had retrieved his two birds.

"Yes, I got him, but I'm sorry I shot him. I have a spark of humanity lingering somewhere in me, and, if I know myself aright, I believe I never shot one of these little 'Bob White's 'but that I did not entertain some feeling of remorse after the deed was done. Not that

I pondered over the moral question of the sport, but somehow the sorrow was sure to creep intrusively into my conscience. It may however come home to me a lit-tle closer than to other gunners, whose love for the pas-I pondered over the moral question of the sport, but somehow the sorrow was sure to creep intrusively into my conscience. It may however come home to me a little closer than to other gamers, whose love for the pastime has spring up within a few years. Mine has been lifelong, and those centered bevies mow paining their melancholy requiem below in the hollow were the companions of my boyhood. I cannot forget their connection with my happy but errant days, when, a reckless youth, how far would I wander into the daisied and clovered mendows of summer time and listen to the incessant 'Bob White,' and 'Ah! Bob White,' frequently to be lulled to sleep beneath a cooling shade by the perch pond, and awakening to find the float which I left bobbing upon the stream gone, line and all gone. The recollection of those pleasant, haleyon days steal in upon me now, as their many fanciful and sportive scenes have long been obliterated by the light of civilization. The woodman's axe has ceased for many a long day in the Chestnut groves, and the heavy trunks which bore their mantling shade have been taken out one by one from the woodpile, until their last flicker has vanished from the broad hearth. Ah! so long ago, it seems so long to real nideed, great avenues now strotch and cross the heath where I used to ramble. I cannot forget them if I would, Oscar. How I would find the quall's nest in the spring time, go to watch it every day; and finally, to go some hazy summer and find all gone, mother and chicks. They were companions in whose courts I were ever willing to sejourn, were it possible, even now and then; and then there were wild schoolmates, few were they indeed to strangle them. They are nearly all gone, sorrowful to say. I I hove the heetic flush of autuum—her pallid akies; her scumbled copee and woodland, and even the weird music of her tinkling leaves. The killing of a few innocent birds is a secondary matter with me. I am sorry I shot him.

weird music of her finking leaves. The kining of a few innocent birds is a secondary matter with me. I am sorry I shot him.

"Well," added he, with an atheistical swing of the head, "if we all thought down here the way you do, why, the fact is, we'd starve. It's bread and water for us, though we cannot, for the time being, forget the sport attendant. There's no one willing to deny that fact, whether he pursues the quall, woodcock, grouse, ducks, geese, hares, deer, or bears, if necessary, the pursuer cannot forget that the act is accompanied with sport. Now I have, as you know, many nights to spear cels in the creek, and the thought has often struck me that it was not the nicest way to catch a fish-to drive a spear through him the way I do, and leave him squirming in the boat; but Harry, I'm thinking of my breakfast, it's a necessity, man. Now as you have broken the spoil by your first quali, look quick and mark down every well mark down any in the ceder rotte. Hence and into the open buckwheat fields, or the fellows will best us sure; they have fired full thirty shots now. We could not very well mark down any in the ceder patch, Guess you don't feel well this Wo.'!! Ever feen, this corner Harry and well mark down any in the cedar patch. Guess you don't feel well this morning, though you should; it's a beautiful morning. We'll start from this corner, Harry, and try all along the fence and then quarter the field; dare say we'll get a few among the heaps of wheat. Brace up, a full bag is a glad heart to the sportsman. "Eight are enough for me for a day's sport, though some men whom I know would shoot eight hundred in a day if they could be found." "You're a queer coon, Harry, I do believe that if you were to meet a bear in the forest, or a Bengal in the jungle, you'd try to persuade him from his hunger sooner than satisfy him with the smell of powder."

Bengal in the jungle, you'd try to persuade him from his lunger somer than satisfy him with the smell of powder."

"Enough, Oscar, don't you remember how some of the woodcock which we shot last July could not be used on account of the putrefaction which set in despite all our efforts to save them? Have you never read how the curse of the Almighty came upon the Israelites when they gathered too many quail, and how they stunk and bred pestilence? I'm not preaching now, understand me correctly, I'm simply giving an illustration. Some men shoot twenty brace of quail in a day and cannot use the half of them, and if they do not find their way into the trash burrel, they are offered at "so much" per head, and not unfrequently do they turn out to be market-shooters. I have known such cases. Its a disgrace, to be plain and explicit upon the subject, there will be a limit ere long to a day's shoot. Let the dog in there and I'll show you that I can kill a quail." We proceeded, making first a circuit of, and then quartering Bennet's lots, knocking over the stragglers from their retreating flight, and finally reached a piece of swampish land, a first-rate woodcock ground for mid-summer shooters. We'll catch a rabbit or two here if the dog is smart enough. Walk down there a short pace. I put up a woodcock in the middle of winter about where you stand."

"Indeed, a queer time of the year for the long-billed

stand."
"Indeed, a queer time of the year for the long-billed beggar to be in this climate. Did you shoot him?
"No, I waited too long. I wasn't mistaken though, it was a woolcock."
"Well, honestly, Oscar, I'd rather shoot them in January was a woolcock."

ary than in July. Even evading the moral and humane view of the subject, there's far, far, more sense in it if the birds could, or if they were so constituted as to be in season at the period."

the birds could, or if they were so constituted as to be in season at the period."

(D. striata). The nests of these species were found on the season at the period."

(D. striata) and yellow warbler (D. maculosa) was found only on and yellow warbler (D. maculosa) was found only on and yellow warbler (D. maculosa) was found only on the main island. The yellow-rumps chose for the location of their homes the edges of clearings on the borders of a brood of the main island. The yellow-rumps chose for the location of their homes the edges of clearings on the borders of some old wood path, rarely breeding in the low swampy growths so congenial to the black-polls. By the slaughter. They breed nearly at the same time; they're not half grown; but every fitth bird is matured; they are a fitty of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs of the former were already half fledged, though eggs were also found far advanced in incubation. With the solid three of us, cannot be prompted by any love for the sport, and I cannot see, for the life of me, what pleasure there is in worrying yourself and your dog half to death. Molest them not until the 15th of September, Ill conceded that for, and from that time on, until lato in a rustling October,

don't want to shoot him then. Haven't you quail, grouse, myriads of ducks, hares, etc. Fishing is a gen-

grouse, myriads of ducks, hares, etc. Fishing is a gentleman's pastime for the summer months."

"Well, I'll have a talk with you some other time upon that subject. I want to get a rabbit and then we'll make tracks for home. I'm going to take the boys out on the bay this afternoon, and we must have dinner over by one at the least."

We get the "pumpia" and baying half an hour to be.

tracks for home. I'm going to take the boys out on the bay this afternoon, and we must have dinner over by one at the least."

We got the "bunnie," and having half an hour to loiter on the way, we made tracks homeward. As we trod the moist, sombre sod, by leafy combs which bordered the swamps, the scenery became picturesque. The warm rays of the sun had dissolved the white frost into millions of pearly drops, and had also brought out myriads of piping robins and screaming blue-jays. Presently we gained the hill-top, and far off could be seen the tiny white gables, among them, Bill Simpson, and there also towered, like great ghosts, the three poplars. Constantly did we hear the soft, distant crack of the fowling pieces of the other parties; now three or four smothered bangs and then a lull, while the faithful dogs were in quest of other bevies.

Proceeding languidly toward the poplars an incident cocurred which I think of sufficient importance to chronicle, never remembering recording it before. We flushed a bevy of quail whose instinct led them to our right quarters, where graw some cedars, leaving us in an awkward position on account of their close proximity. I marked them down in a hollow among a patch of sweet ferns and bay-berries. Coming upon the spot where I had surely marked them down, strange to say, the dog failed to make a point, though we made him quarter every yard of it. My friend insisted that they had ran off after alighting, but I entertained different thoughts, and ordering off the dog proceeded to trample the low scrub, my companion standing ready to shoot. It was not long before a brace got up, and then a single bird exactly from my feet. Satisfied that the birds were there, I remained at my work, which was amusement to me, until I had cleared the patch of eight birds, which number I was perfectly satisfied did not exceed the quantity which arose at first ways any addid not exceed the quantity which arose feetly satisfied did not exceed the quantity which arose

as nrst.

The birds were evidently a portion of some bevy that had been previously fired into that morning, and having been put up the second time became frightened and withheld all affluvia, leaving an insurmountable task for the

dog. "Well done, Harry; I'll inform the boys of the fact; but we are behind time now; we must hurry." Chaining the dog we were soon at the poplars, later to

be sure.

be sure.

Bob saluted us by holding up a rabbit by the ear, cutting such a figure—his prey so small and he so voluminous—that I am enforced to laugh even when I think of it, to this day,

"Well," proceeded Oscar, "count the bags, boys. How yanny, you, Henry?" "Eight." "George?" "Ten." "Bob?" "Six and a rabbit (still by the ears), "Will?" "Ten," "Charlie?" "Five." "Fen?" "Six." "And I eleven and a rabbit."

"Good. And now eat like wolves, and Will and I will get the boat ready and sail on the ducks." At the information the boys set up a jollification, the horn blew for dinner, and they separated.

HARRY FENWOOD.

HARRY FENWOOD.

Matural History.

LINNEAN SOCIETY.

A T the meeting of the Linnean Society of New York, held March 6th, the annual election of officers took place, resulting as follows: Mr. E. P. Bicknell, of Riverdale, New York City, was reëlected President; Mr. R. F. Pearsall, of Brooklyn, was chosen Vice-President; Mr. C. H. Eagle, of New York City, Secretary; Mr. N. T. Lawrence being reëlected Treasurer. Since the last report, printed in these columns, several interesting meetings have been held, and papers presented, notices of some of which follow: Mr. Robert Lawrence, of Flushing, gave a list of some additions to his cabinet during recent years, among which the following were recorded from near this city: Oyster catcher (Hæmatopus palliatus), New York harbor; yellow, and little black rails (Porzana noveboracensis and jamaicensis); red phalarope (Phalaropus fulicarius), and the gyr-falcon (Falco sacer), all from Long Island; black vulture (Cathartes atratus), from Sandy Hook, and also the great grey owl (Syrnium cinereum), from the Adirondacks.

Mr. Pearsall read a paper on the breeding of certain warblers at Grand Menan, and the Rangeley Lakes, Maine. At Grand Menan the most common warblers were the yellow-rumped (Dendræca coronata), and the black-poll (D. striata). The nests of these species were found on the small outlying islands, while that of the black

worms of the same family as silk producers was also discusse(l.

A paper by Mr. T. S. Roberts, of Minneapolis, Minn., was read by Mr. F. Benner, describing the eccentricities of a pair of phospe birds (Savornis fuscus) in their choice of a nesting place. A striking instance was given of a pair of these birds choosing for their nesting site the second floor of an unused house, only accessible from a broken window pane on the lower floor and after passing through several rooms. Here they attempted, though unsuccessfully, to construct their nest on a narrow strip of wood nailed to the wall, covering both it and the floor with quantities of moss and mud. In this connection Mr. Pearsall spoke of a nest of this bird built on the horizontal limb of a willow, after several unsuccessful attempts had been made to place it in a slied.

A. communication from Dr. A. H. Atkins, of Locke, Mich., read by Mr. Mearns, spoke of the occurrence there in January of the red-bellied and golden-winged woodpecker (Centurus carolinus and Colaptes auratus), also the robin.

At the meeting of Feb. 21st Mr. Ingersoll spoke on the distribution of the ovster along our Atlantic seaboard. The habits of this animal and its enemies were alluded to, and various interesting points in oyster culture touched upon. Remarks on this topic elicited the fact that both black and green oysters-not shells-were of occasional occurrence.

At the same meeting Mr. Bicknell remarked on the development of ferns.

A paper read by Mr. N. T. Lawrence on the greater long-beak (Macrohamphus scolopaceus, Say) will appear in the Bulletin of the Nuttall Ornithological Club; so it will be unnecessary here to more than allude to the fact that the author brings forward some new points bearing on the relations between the bird and M. griseus, which may agaist in clearing up the uncertainty which has long attached to them.

The migration of birds was treated by Mr. C. H. Eagle, in a paper dealing primarily with the facts of this wellknown phenomenon, and incidents bearing upon them, The paper provoked considerable discussion,

Mr. Bicknell reported the following items from Riverdale bearing on the advance of the season before its re-The flowering of the wild plants indicated cent relapse: the season to be over a month in advance of that of last year, and between two and three weeks ahead of the remarkably early season of 1878. Of trees and plants eight species were in flower before the 1st of March, and up to the present time fourteen have been observed. The liver leaf (Hepatica triloba) was in flower as early as Jan. 11th, and skunk cabbage (Symplocurpus) the last week of Feb-Tadpoles were to be found at almost any time during the winter, and frogs (Rana clamitans) noticed. and peepers (Hyla pickeringii) heard, in every month. The first snake found was on Feb, 29th (Eutænia sirtalis), always the earliest. Immature individuals of what were unquestionably Spelerpes bilineatus - a salamander were found every month; numbers of newts (Diemyctylus viridescens) were secured Jan. 4th. Other salaman-ders found were Plethodon erythronotus, Feb. 15th, and Amblystoma punctatum was abroad Jan. 25th, spawning March 7th. The phoebe bird (Sayornis fuscus arrived March 5th, nearly two weeks earlier than usual. Mr. Pearsall reported having seen the bird on Long Island on the 22d of February.

A CHAT ABOUT OWLS.

HAVE always had a weakness for owls, and scattered over the pages of my note books for the last twenty years are many anecdotes relating to these birds, for I have shot and stuffed, trapped and petted owls in many lands. One of my first recorded adventures with these hirds was as follows :-

In the belfry of a village church in the east of England, a brown owl had reared its young. The church stood in an old park, near a hall where resided the old Squire-lord of the manor and owner of the whole village. Everything around was antiquated and venerable. Again I see, in my mind's eye, the ivy-clad oaks, the mossy fences, the park strewn with decaying timbers that no one was allowed to touch. No boy dared to pluck

for in at the back door walked the old sexton with the owls. He had gone straight to the barn, and there were owls. He had gone straight to the barn, and there were the birds in a barrel. I accompanied the party to the church tower and saw the birds safely replaced in the muss of filth that had served as a nest—probably for years. There were birds and mice, frogs and snakes, young hares and rabbits, and even fish lying all round in various stages of decomposition. The old owls hissed

mys of hith that had served as a nest—probably for years. There were birds and mice, frogs and snakes, young hares and rabbits, and even fish lying all round in various stages of decomposition. The old owls hissed and snapped round, but finally, though they had been away three days, came and sat near and caressed the young, to the Squire's intense delight. The sexton, who was also assistant gamekeeper, shook his head and said: "Don't you think they be a leetle too hard on the hares, Squire's' but the kind old geatteman, with a spirit worthy of Unule Toby, answered: "Nevill, there are plenty for them and for us too," It is needless to add, the owls were no more disturbed.

Among the strange styles of head gear affected by ladies, one of the most fashionable lately, has been hats trimmed with owls heads and wings. Faust refused to dance with the young witch, because "there sprang a red mouse from her mouth," Somehow, the association of ideas brings this passage to my mind when I see these mouse-exters on a liat. It is curious to observe what favorite material for head decoration feathers are, both with civilized and uncivilized nations. I have seen in various islands in the South Paolito head dresses made of feathers, as elaborate as those of Paris or Now York. A gaudy feather, or bright wing, is easily attached to a head, whether the owner is the possessor of a hat or not. I shall not discuss the propriety of destroying by whole-sale, beautiful and harmless creatures, sacrificed because fashion with doubtful taste demands it. I must, however confess a feeling akin to horror—a feeling that every true naturalist must experience, at any enormous waste of animal life, whether it be thousands of buffaloes, slain for their hides, or bright-hued birds, for their feathers. Owls, not being generally gregarious, are hardly likely to be exterminated by the million, yet they must be destroyed in considerable numbers to supply the demand.

leating likely to be exterminated by the million, yet they must be destroyed in considerable numbers to supply the demand.

The fashion of wearing owls' heads is by no means new. I saw an Imperial hunting fete at Versailles, when the Empress Eugenie was in her glory—bright, beautiful and, I suppose, happy. The ladies and genthemen both wore owls' heads on their hunting caps. The fashion spread, and owls of all kinds, from 'Le Grand Duc' (as the great horned owl is called) down to the little sparrow-owl, were in great demand. A kind-hearted naturalist protested against their destruction, urging that they were the best friends of the agriculturist, and should be protected. However, fashions changed in the spring. The owls had their day, and poor Eugenie ladd hers; the owls still hoot and blink round Versailles, but the Bonapartes have departed, perhaps never to return.

Manymay say they are lords by day.

Many may say they are lords by day, But the king of the night is the hold brown owl.

When the boys in Europe wish to rob an owl's nest of the young, and cannot reach down the hollow tree, they the a worsted stocking to a stick, and poke it down. The birds turn on their backs and grasp the stocking with their claws, and are easily drawn up, as they possess the faculty of holding on in a high degree, as my torn clothes and lacerated hands could frequently testify. Owls are easily tamed, and sometimes make interesting pets, although there are more differences in individual tempers than most people would imagine. I have living at this time three snowy owls, captured this winter. One was wounded with a rifle ball; one was trapped; the other attacked a hen in mid-day, but was in turn knocked over lay a gallant game-cock; the farmer saw the circumstance, ran and threw his coat over the owl and secured him. All my birds are very tame, and will submit to be coaxed on the lead, and will take food from the hand at my time of the day or night. I think I may say the

him. All my birds are very tame, and will submit to be coaxed on the head, and will take food from the hand at any time of the day or night. I think I may say the snowy owl is an exception among rapacious birds in the quality of its desh, as it is really tender and well tasted. I have known it eaten on several occasions, and pronounced excellent. One was served up incog, at a public dinner, and was greatly relished.

The voices of some of the small owls are very peculiar. During the France-Prussian war I was at Chantilly, and on several evenings, as I walked along the race-course, I heard a strange cry from the chestnut trees near the most. Kend kend kend rang out loud and clear at regular intervals. I asked one of the chasseurs what it was an omen—a bad sign—a bele noir.' I appealed to the lodge-keeper; that worthy not only concurred with Pierre, but sagely added "it betokened war, and his wife's fatter had heard it before every revolution." However, I watched attentively for a couple of evenings with my gun; my patience was rewarded with a pair of the aver, I watched attendively to a couple of evenings with my gun; my patience was rewarded with a pair of the pretty little scops owl, and the noise was heard no more. The augury was fulfilled, however, for in three months the German army was eneamped on the course.

The singular cry of the saw-whet, or acadian owl, was a puzzle to oratichologists for a long time. It was attributed to several species before the right author was discovered.

puzzle to ornithologists for a long time. It was attributed to several species before the right author was discovered. This small owl is moderately common near Lake Ontario. I have met with it there at all times of the year. I captured two hardly fledged young on a stump in June, 1877, one of which I lost through the curiosity of a lady, who opened the satchel in which they were. The birds looked up at her so quaintly that she dropped it in alarm, and one scrambled out and got lost. I kept the other nutil it was well feathered, and then killed it for a specimen, as it was in the white-fronted immature plumage. The present winter it has been common. I have myself obtained four fine specimens and seen several others. It is by no means ashy bird, although it can see very well by day. Its food seems to be chiefly insects; its castings invariably contain the elytra of beetles.

During the fall of 1878 I was staying at a farmhouse where a very tame and sagacious crow was kept, a gift from myself by the way. The chickens had been sadily thinned by the hawks and owls, and I always kept my gun in readiness. One night when the guinea fowls were lausually clamprons I got out of bed, took my gun, and

thinned by the hawks and owls, and I always kept my gun in readiness. One might when the guinea fowls were unusually clamorous I got out of bed, took my gun, and walked barefooted to the garden, just in time to see a large owl make an unsuccessful dash at one of the watchful sentinels. I waited some time in vain for a shot, then went to bed again—only to be aroused by a terrible cawing just outside my bedroom window. I opened the sash, and there was poor Jack—the crow—and a large owl on the ground engaged in a regular rough-and-tum-

ble fight. I could not shoot for fear of killing the crow. ble fight. I could not shoot for fear of killing the crow, which was a great favorite, so I ran out round the house. The owl escaped in the shadow of the orebard, but I saved poor Jack, though he was the worst frightened bird I ever saw. The next norning I found evidence enough to prove the identity of the robber. Jack had defended himself bravely, for a unmber of the owl's feathers were scattered around—it was the barred owl. S. nebulosum. The enmity between the owl and the crow is popular in Hindoo tradition. Kākāris, or enemy of the crow, is one of the Sanskrit names of the owl. Aristote also says "the erow fights with the owl, whose eggs it destroys at midday, while the owl on the other hand eats the crow's eggs at night." The Italians use the expression, "the owl amounts the crows." in udicate a serious dan-"the owl amongst the crows," to indicate a serious dan

crow's eggs at night. The itanans use the expression, "the owl amongst the crows," to indicate a serious danger.

The common screech owl is one of the most andacious of the family. One in my neighborhood last winter made three attempts at a canary that hung near a window; it dashed at the glass with such force as to knock itself down every time. When the canary was removed the owl went and bestowed its attention on the tame doves, six of which were found dead and their heads partly caten next day. The owl had not only killed the rightful owners of the dovecot, but had taken possession. There he sat and snapped defiantly at the hired man, who would have wrung his head off at once, but the lady wished it to be sent allye to me; it however escaped in transit. I have one, however, that was caught in a dovecot, where he had killed and partly caten four doves. Another in my possession didn't escape so easily, for it killed a female dove and attacked the male, a large, strong bird, and during the struggle the dove broke one of the owl's wings by the vigorous flapping of its own. If any person wishes to know what opinion small birds have of the owl'they have only to fasten one on a pole in a gardon in the breeding season and they will hear more ornithological abuse than ever was expressed on the spar-

a guided in the breeding season and they will near more ornithological abuse than ever was expressed on the sparrow question. A robin had built its nest on the window-sill of an out-house in my garden, and when the young were nearly fledged, during the absence of the parents, I placed a stuffed seveced owl by the side of their nest. When the robins returned the effect was ludicrous; the found come first unstancing a carnet with the scatter. female came first, unsuspicious as usual, with a mouthful She didn't notice the owl until close to it, of food.

female came first, unsuspicious as usual, with a mouthrui of food. She didn't notice the owl until close to it, but then dashed back screaning and in such confusion that she struck herself against the house. The male bird was soon on the spot, and such a chink-chinking was kept up that one would have thought half the robins in the country were there assembled. I removed the owl after a time, but it was torn to pieces and the robins didn't recover their equaninity that day.

The great Virginian owl is the worst enemy of the quail, much more so than any species of hawk, as I have had good proof. My owls are almost ifrantic to get at my tame quails, and the sight of a stuffed one is sufficient to keep the latter wakeful an hour. The disagorged pellets give unmistakable evidence that they prey on these birds in preference to others, and whenever the quails are found in plenty I have always discovered the owls. I have had for several years a fine female red-tailed hawk, reared from the nest and very tame. I had the owls. I have had for several years a fine female red-tailed hawk, reared from the nest and very tame. I had a male Virginian owl that I kept in the cellar, until he knocked down too many things to please the housekeeper. I then put him in the hawk's house; there was plenty of room, and they didn't fight, but they kept a constant watch upon each other. At every movement of the hawk the owl would bristle up as big as a lager beer keg, and at night when the owl moved the hawk would scream with terror. After a week I was obliged to separate them, for although they were both enormous caters, neither had touched a morsel of food since they had been together.

The hawk owl I have met with but once. I was hunt ing in November, 1877, and while crossing a rough, stony lot, always a favorite resort for the marsh hawk in sum lot, always a favorite resort for the marsh hawk in summer and the snowy owl in winter, an owl rose from behind a stone pile with a mouse, intending to alight on the stones. He saw me and rapidly changed his mind, but too late. I fired, and was delighted to find I had secured a very fine male hawk owl. I received one the same winter shot by a friend on the Canada shore of

Lake Ontario

Lake Outarno.

Many superstitions respecting owls have provailed from
the earliest times to the present day. Birds of ill omen
generally in all countries, they have yet the reputation
for superior wisdom among the feathered tribes, and cerfor superior wissom among the feathered tribes, and certainly if blank, inexpressive gravity is characteristic of this quality, the owl who "nightly asks who's who, and pauses for a reply," is entitled to all the honors. One belief of the ancients regarding these birds has not descended to our time. At least I have heard of no practical illustration. I think it must have escaped the researches of the apostles of Teetotalism. It is, that the excessed in owl drawl for thread again vision parts drawled.

cal illustration. I think it must have escaped the researches of the apostles of Teetotalism. It is, that the eggs of an owl drault for three days in wine make drunkards abstendious. Philostratus says that no one can ever like wine after eating an owl's egg.

I will conclude this rambling paper with an account of my first experience with the Virginian owl. When I arrived in the States a few years ago one of my first inquiries was respecting this bird. Soveral friends promised to procure one for me. On returning home one day I found a splendid newly-killed specimen lying on the floor of my room. I was examining my prize, when in came my office boy, cook and general factorium. "A man brought it," said he. "He heard you wanted one; but I am afraid I paid too much for it." ("On, no, you didn't," I replied; "how much did you give?" "Five dollars," said Ted. "Oh, well! that is rather—well, tis a beauty. Here is the money, and there is a quarter for yourself. Many thanks for buying it. "I skinned and preserved my specimen that evening. Some weeks after that we were out hunting together, and I shot an owl of the same kind. I incidentally mentioned our first specimen. "Well." said Ted, "I behaved real mean about that bird. I have often wanted to tell you, and now I must. I only gave a quarter for it."

Percorne.

A Shower of Worms.—Washington, D. C., Murch 5th.—The Baltimore Sun of this date contains a short notice of a "shower of worms" in that city yesterday morning. The fact that the worms could not have come up through the solid Schillington pavement was cited as evidence that they nust have fallen from regions above. The same phenomenon was noticed here this morning.

The worms were to be seen in great numbers on the concrete pavement of Pennsylvania Avenue, through which, of course, they could not have made their way. The street railway on the avenue is bouldered, and the side-walks are of brick and stone. But in these places there were no indications of borings through the interstices to the surface from the soil below. The question is, did they fall from the clouds, and if so, how did they get there. The fifteen puzzle is not a circumstance consequent to the surface of th pared to this J C B

Our correspondent can rest assured that the worms came up out of the ground, and not down from the clouds, The first warm rains of early spring always bring out these animals in great numbers. Probably their appearance at this time is connected with the breeding instinct.

Buried Horns.-Our correspondent "Sycamore," who started the question "Do deer bury their horns?" revive the topic and burls a Parthian dark at his opponents in the following note. He says :-

the following note. He says:—
I was in Druid Hill Park this afternoon taking a look at the deer. In conversation with Capt. Cassell, the Superintendent, we fell upon the burying question. He informed me that they had just ploughed up a piece of ground, and had unearthed more deer-homs than had ever been found before during the whole fourteen years the deer had been confined in the park. As I am the one who first started the discussion, I feel at liberty to add this last word.

Hish Culture.

PROF. ATWATER'S PAPER.-We have been obliged to defer the publication of Prof. W. O. Atwater's paper read before the Fish Cultural Association last week. will, however, lose none of its interest nor value by the delay. We shall publish it in our next issue.

American Fish Cultural Association,-The meeting last week was harmonious throughout, and the members uniformly expressed great satisfaction at the results attained. The dinner at the Metropolitan Hotel, in the evening, afforded an opportunity for discussions and speeches less serious than those of the business sessions, and stimulated by the ever-ready humor of the President. each member contributed his share to the general fund of good things.

The officers for the ensuing year are as follows :- President, Robert B. Roosevelt; Vice-President, George Sheppard Page; Treasurer, Eugene G. Blackford; Corresponding Secretary, Barnet Phillips; Recording Secretary, James Annin, Jr.; Executive Committee, F. Mather, G. B. Goode, Samuel Wilmot, Benjamin West. Thomas Ferguson and H. T. McGovern.

A Spawning Eel .- " J. K. O." sends this note taken from "Sub-Tropical Ramblings," by N. Pike, Harper's, 1873, page 271, with the remark that it may be of interest to Mr. Roosevelt :-

One day, when out at some distance from the reefs, I had the rare good fortune of watching an eel exude its spawn. I noticed the creature swimming uneasily about, spawn. I noticed the creature swimming uneasity about, and it excited my curiosity. Although my presence evidently annoyed her, it would appear this was the spot she had chosen to deposit her eggs. After gracefully and slowly circling round, she remained for a few moments perfectly motionless, and then the operation commenced, resulting in a beautiful spiral scarlet string of spawn, nearly ten inches in length and over an inch in width. After all was completed, and the eel had carefully examined with a sudden start it dispensed and began a length and carefully examined with a sudden start it dispensed and began a supplied with the sudden start it dispensed and began and these men. After all was completed, and the bet had carefully examined, with a sudden start it disappeared, and I was unable to capture it. I carefully collected the eggs and preserved them in glycerine, but I am sorry to say they soon faded to a faint yellow. The string resembles, to the naked eye, a delicate scarlet fabric of lace.

Yellow Pike-Perch in Connecticut.—A new fish for our waters was taken in Scantic River, in a net last week, by Mr. George B. Blødgett. It was brought to me alive, and is now in my trough, quite lively. As it was new toour oldest fishermen, I referred to by: Storer's me alive, and is now the way are to our oldest fishermen, I refered to 101, name was new to our oldest fishermen, I refered to 101, name report on the fisheries of Massachusetts, and found in the Rev. J. I went of the content of the Rev. J. I have a full the result of the content of the Rev. J. I have a full the result of report on the fisheries of Massachusetts, and found no mention of it. Neither is it included in the Rev. J. H. Linsley's list of the fishes of Connectiont. Thinking it might have been introduced by our fish commissioners into our waters, I wrote to Dr. W. M. Hudson for information, and received the following reply: "It has not intentionally been introduced by the fish commissioners, andwe have no information of any private efforts to introduce it."

It is remarkable that this section affords such a field

is remarkable that this section affords such a field It is remarkance that this section amoust such a field for rare specimens in ichthyology and ornithology. In 1868 I had brought to me in a tub of water, from Scan-tic river, a compressed turbot (Sola compressa). At that time this was the fourth ever taken so far as known—the the river, a compressed turbot (Sola compressa). At that time this was the fourth ever taken so far as known—the other three had been captured in the Connecticut River and its tributaries. It was so rare that Prof. Baird requested me to donate it to the Smithsonian Institute (which I did), as they had no representative of that species. The yellow pike-perch is even rarer in our waters than the turbot, so far as I am able to bear. It is an exceedingly voracious fish, and is notnew to our western waters. According to DeKay, it is found in most of the great takes and most of the streams and mitand lakes in the western part of New York State. "It is found from the Olio through all the great lakes, and though the rivers of the fur countries up to the 5sth parallel of latitude." Dr. Kirland asys: "It is one of the unsix valuable fishes for the table found in the western waters. It is so abundant in the Maumee river that fishermen take it as an article of commerce."

The body in form resembles a pickerel or pike, but the color and markings are that of a perch, hence its name.

wide, lower jaw received into the upper, two very loug and cospicuous teeth in front of each—those of the lower and cospicuous teeth in front of each—those of the lower jaw received into cavities above. The length of my specimen is twelve inches, but they are taken in the lakes more than twice that length. It is reported that one thirty inches long was found dead on the shore of Chartangua Lake, which had attempted to swallow a duck. The duck's head was thrust though the gills of the fish, and both had perished, attached together.

I have not given a minute and scientific description of this fish, but pointed out some of its most striking peculiarities, so that it can easily be identified.—William Wood, in Hartford Times.

East Windsor Hill, March 24th, 1880

FISH IN SEASON IN APRIL.

Speckled Trout, Salvelinus fontinolis; Land-tocked Sahnon.
Salmo alovert; Smeits.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its season; Boats, Guides, etc.; Name of person to add

See the notice above of the Forest and Stream Directory, and act upon the suggestions contained it it.

√ The trout of Green's River, Long Island, are famous for their game qualities and a flavor which is unsurpassed, we believe, by the fish of any other stream in the world. A happy combination of favoring conditions unite to give them these qualities. Green's River is one of those Long Island streams which bubble up in abundant springs of clear, pure water, and flow down through watercresses and fringes of thicket directly to the sea. Unlike many of the other streams, its course to the salt water is free from obstruction, and untrammeled by dam or screen. The watercresses, the muddy bottoms and the brush on the banks afford a marvelous supply of choice food for the trout, and to this are added the shrimp and other dainties which the fish find when they go down to salt water. Living thus, partly in fresh water and partly in brackish and salt water, the Green's River fish acquire a flavor which, as we have said, is not to be excelled by the daintiest trout in the world. Add to this, that they are game—every inch of them; that in many places one must cast from a boat, and throw long casts at that-and we have a fish which it is well worth while snatching aday from the round of business to capture.

Green's River, we should add, is private property,

and is protected from the attacks of poachers by a dense growth of thicket along the banks, and a series of mud-holes and treacherous mire, into which a man who does not know the stream, or who is not guided by some one familiar with it, must inevitably fall; and if he falls he is lost. The river has been for years reserved by Messrs. L. H. Abbey and Chas. F. Imbrie, and thither each opening day, with invited guests, they repair with the happy assurance of finding an ample supply of fish for themselves and their guests. Last week these gentlemen went down to Sayville, accompanied by Mr. Joseph Jefferson, who is really an expert with the fly. The success of the party is told in the following note:-

The number of anglers who left this city last Wed-

The number of anglers who left this city last Wednesday was entirely unprecedented. Our party consisted of Joseph Jefferson, L. H. Abbey and myself. None of us had time—but we took it. Jefferson's motto, "Pleasure before business," we found good not only in theory, but also in practice. On our return we felt as if .we had new mainsprings in us.

We went to Sayville, Long Island, and made our quarters at the Foster House, where we always find a good table, comfortable bed, and a hospitable host. On the first we fished Foster's Brook and Green's River above the bridge. In the last hande stream we took lifteen trout. These were taken in a few minutes' fishing, during a short period of south wind. During all the rest of the day we had every sort of wind but south, and consequently could get no fish, for it is a well-known peculiarity of this locality that the wind must be either exactly south, or sou-sou-west, or one cannot take trout with a fity.

stream is shown. Anglers, as well as lovers of pictures, can see for themselves how carefully true to nature this seasonable painting is treated.

The Nepisiguit and Matapedia.—New York, March 30th.—Editor Forest and Stream:—A communication in your paper of the 11th inst. on salmon fishing in Canada is likely to mislead such of your readers as may never have been to the Nepisiguit River, in New Brunswick, but who may desire to cast their fly on its waters. That stream is leased to private parties, like all other salmon rivers in Canada that are worth anything; but the lower division, or what is called the Rough Waters, can be fished by any one on payment of \$1 per day to the Warden. The consequence of this practically open-to-all privilege is a great crowd of anglers, good and bad, and no sport nor pleasure to any one. and no sport nor pleasure to any one.

And much the same result obtains on the Matapedia or

And much the same result obtains on the Matapedia or the lower part of it, which is open at the same price. I can't see any recompenses for a considerable outlay in traveling and other expenses, in threshing waters surrounded by a mob of like foolish and deluded sportsmen. I think that your correspondent also estimates the expense of a salmon trip too light. My experience is to allow for all probable outlay, and then double the amount; and this will be the cost on counting up the expense after returning home.

Maniattan.

Massachusetts-New Bedford, March 24th,-The fish-Massachusetts—New Bedford, March 24th.—The fishing season has commenced here at least two weeks earlier than usual. Many of the fishermen have been putting in their "traps" the past week, and considerable quantities of fish have been taken, mostly herring, although some tautog and a few menhaden, the earliest ever known, have been caught; also a very few shad. Over 7,000 herring were yesterday brought over in the Vineyard steamer, caught the day before.

CONCILA.

Connecticut—Bridgeport, April 1st.—Mr. D. Stirling, this city, this day brought to basket twelve trout— CONNECTICUT—Britagepon, 1, 2000.

of this city, this day brought to basket twelve troutfrom half a pound down. Total weight, 31 pounds; time, 4.11 A.M. to 4 P.M. Of all the articles that have ever appeared in your interesting paper, none have interested me more than "A Day's Trout Fishing in Ireland," by "Ringwood." He is one of the few who know how to J. M. S.

use their pens.

A DRONDACK FISHING.—Indian Lake, March 20th.—A few stray ducks visit our lakes and streams in the spring, but they are very few. Hunting is very good here in the fall, game consisting of deer, bear, ruffed grouse and some woodcock; no quail. Trout fishing is very good here in the right season in some localities that I know of. One great trouble with the majority of sportsmen who come to the Adirondacks is that they come too late in the scason, and sometimes have to return dissatisfied. I always had the best fishing here say from May 15th until June 25th, and I have fished in this country for the last ten years. If a man comes here at that time he will have the satisfaction of getting some very nice trout, but he must not be afraid to rough it to merit success.

If any of your readers wish to come to this place I would be very glad to inform them of some first-class fishing grounds and also hunting grounds in the fall of the year. There is very good prospect for deer nextfall,

Issuing grounds and also limiting grounds in the fall of the year. There is very good prospect for deer next fall, as they have not been crusted this winter, thanks to the small amount of snow that we have had. Three years ago about two hundred of our noble deer were killed in the deep snow within twenty-five miles around by some of our most unprincipled guides and hunters, who should have been prosecuted if the authorities had done their duty. But I have not heard of a case this winter. is winter. O. St. Marie.

The Beaverkill Cille.—No. 99 Nassau street, New York, April 3d.—The Beaverkill Club has been in successful operation for more than two years, and has absolute control, under its leases and agreements, of the headwaters of that excellent trout stream, which have never been polluted by the refuse of either sawmith or tamery. Permit me to say it, your columns, that a few more gentlemen will be admitted to membership upon introduction or satisfactory reference. Gentlemen so disposed are invited to write to, or call upon the undersigned.

THE WICCAPEE SPORTING ASSOCIATION.—The name taken unto themselves by this society of anglers, of the pleasant little village of Fishkill-on-the-fludson, is "Wiccapee" and not "Wiccasee," as some have erroneously given it. We shall hope to hear of some of the red letter days of the clubs.

THE TROUT STREAMS OF ULSTER.—Stamford, N. Y., March 26th.—As every summer tinds me, rod in band, enjoying gentle sport in bright waters, it may not be amiss to tell your readers where I delight to go. I used to haunt the lakes and streams of the "North Woods," so well described in Hallock's Gazetteer and Walconsequently could get no fish, for it is a well-known peculiarity of this locality that the wind must be either exactly south, or sou-sou-west, or one cannot take trout with a fig.

On the second day we fished Green's River below the bridge, and as the wind was right during an hour in the morning and about an hour in the afternoon, we took thirty-six fine trout. Thus our take for the two days was fifty-one in all.

I never passed two more delightful days and evenings that these; not only was the fishing of the right sort, the fish being killed fast enough to satisfy any sportsman, and yet not fast enough to become mere butchery, but the ready wit and kindly ways of Jefferson imparted a zest to the occasion which will give it a most pleasant place in my memory.

—Messrs, Conroy, Bissett & Malleson have on exhibition at their store a very fuithful picture of Long Island brook trout, painted by W. Holberton for a member of the South-Side Club. It represents a couple of trout of about a pound weight on a bed of bright green moss and violets. In the background is a very carefully painted split bamboo rod, and in the foreground a glimpse of the

Rochester, April 8d.—The opening day of trout fishing was favorable to anglers in local waters, and rare sport was enjoyed by several from this city. One man inter-ested in a preserve on the famous Caledonia Creek is said ested in a preserve on the ramous Casedonia Creek is said to have taken seventeen pounds of trout from its waters the first day, and then he returned small fish to the stream. Some unpreserved small streams were built-fished with success, but the anglers were nearly as numerous as the fish; on one stream, about half a mile long, eleven fishers were simultaneously dropping their bait in its few inches of water.

DITING DECOY.

TENNESSEE-Savannah, March 30th.-I caught my first TENNESSEE—Savannan, March 30th.—1 caught my lirst bass for this season last week. Myself and friend took ten, the largest weighed (several hours after being caught) two pounds; average of ten, one pound. We used live minnows for bait. The fish bit rapidly for about thirty minutes in the middle of the day and then about thirty limites in the induced of the day and den-seemed to stop feeding, as we caught only two more dur-ing the afternoon. For their size, they were among the gamest specimens I have ever seen, and afforded us fine sport. Another party, two in number, were out on Fri-day last and caught nine. Did not learn the weights. WILL,

THE CHARMS OF COLEBROOK.

COLEBROOK, N. H., March, 1880. S the days begin to lengthen and the balmy air of spring As the days begin to lengther and the bully are of spring greeks us, the true sportsman begins to long for the woods and streams, the open camp, the blazing bro, the fragrant breath of the bed of in boughs and the sweet and refreshing slumber in the pure air of the forest. He begins in his leisure hours to overhaul his dly-rods and fishing tackle, takes the trusty rifle down from the antiers where it has taken its winter's rest, and anxiously looks it over to find out if resultant rest, and anxiously looks it over to find out if resultant in from the antiers where it has taken its winter's rest, and allowing looks it over to find out if perchance a speck of rust has intruded itself upon it. Often in his mind rises the question; "Where shall I go to reinityorate myself after the toils and sectision of many mouths?" May I intrude uponyour columns so far as to invite attention to my spring and asummer shiping and shootng for the last ten years? In the "Coos," above the "Upper Coos," thirteen miles above

ing for the last ten years?
In the "Coos," above the "Upper Coos," thirteen miles above the North Stratford station on the Grand Trunk Ballroad, neetles among the hills the village of Colebrook, than which none more charming is found in the old "Granibe State." In the beautiful Connecticut River valley, with hold Monadnock Mountain stand-Connectient River valley, with hold Monadnock Mountain standing sentinel over it, the village litself is a resort most welcome to the stranger and nost dear to him who returns to it year after year with fresh pleasure. But as the center of a fine fishing country and a point from which, with easy trips, the sportsman can readily reach places where he can take all the trout he ought to take, it is unsurpassed in northern Maine, or New Hampshire. Tumbling and rippling down from grand old Dixville Notch, the Mohawk River affords to him, who desires to take this case at his inn at night, splendid brook fishing for trout from one and one-haif pounds downwards. Ten miles casterly from the village are the Diamond Ponds, and they are rightly maned. Clear, slivery sheets of water set in their dark forest surroundings; to lovers of nature they furnish quiet and intense satisfaction spart from the sport of the splendid rush and gallant light of the imbaltants of its waters. There are two of these ponds, the smaller about two-thirds of a mile long and half a mile wide, and the larger about six times us great. Although the smaller empties into the larger, thirds of a mile long and half a mile wide, and the larger about six times as great. Although the smaller empties into the larger, the trout seem to be almost distinct in their species. Little Diamond furnishes trout from three pounds down to half a pound, few being taken smaller, and they are short, plump and very gampy, while in "Big Diamond" they rarely exceed a pound in weight, though much more numerous, and the fisherman seldom fails to take all he needs.

Twenty-five miles to the north, up the valley, are the Connections for the proof and the proofs and lake trout. Last year the Fish

Twenty-five inites to the north, up the valley, are the connecti-cut Lakes, abounding in brook and lake trout. Last year the Fish Commission stocked the lakes with land-locked salmon, and they are said to be rapidly increasing in size. Many parties visit these are sain to be ripiny increasing in size. Many platters are as the waters and seldon fall to return again. At First Lake there is a good hotel with reasonable prices, and at Second Lake genial Ton Chester has comfortable earny and agreeably entertains all that call upon him. From this lake there is a path across to Parmachence, which those who desire to take long trumps frequently It is eleven miles and a respectable carry. But to go to pluss. It is eleven mines and a respectator confirm to 80 to Parinachence—beautiful Palmachence—the better way is to 190 through Dixyile Notch to Errol Dam, a distance of twenty mi 60 over a first-rate read, and from thence up the river in the steamer Diamond to Brown's Farm and Fred Flint's camp and thence by

Diamond to Brown's Farm and Fred Flint's camp and theace by beat to "Spotis."

How well I remember the first trip to Panmachence with that rugged, good-natured giant, "Spotif Flint," for a guide. The descriptions in the Forest and Stineau of the fishing in those waters have been read with great interest by those who have been in that country, but I believe the great mistake made by most of the sportsmen going up the Magailoway is their great baste to reach the lake itself, and consequently they pass many points of great interest and leave their praises untold. From the head of Axiscoos Falls at Fred Fint's camp to the Little Magailows were school they my leave and in suring the list lishing is found head of Aziscoes Falls at Fred Fint's camp to the Little Magalloway is about thirty miles, and in spring the first Inshing is found where there is quick water on the river, but the teauty of the river for him who carries the gun is the abundance of deer moose and carlt oo to be found all along its borners. Fadding softly up or down the stream, it is by no means uncommant of mid one of these animals feeding upon the lily-pads growing in the water.

From Sport Fint's camp at Sunday Pond there is a pain to Lincoln l'ond, where is undoubtedly the flucts trout itshing in the Magalloway country. It has been fished but little and is comparatively little known, but I have never seen so unbloamly large lish as have been taken from this pond. The lishing and country

paraticely little known, but I have never seen so unitionally large this as have been taken from this pond. The lishing and country above Sunday Pond have been so fully described by your former correspondent that further con ment is unnecessary, but if your sportsman is not in too great haste to reach the utmost limits of his journey at once, let him turry along the river; let him stop at Sunday Pond camp and go to Lincoin, Little Migalloway and the falls above "Big Eddy;" let him watch for the four-footed game along the river where fewer sportsmen abound, and my word for it, he will be ambly remaid for his time. it, he will be amply repaid for his time.

Good guides to all points, and among them Wm. T. Keyes, of Colsbrook, N. H., can be produced at reasonable prices to any of the points named. Tickets from Boston via Colebrook to Erro Dam, and return over the Boston, Concord and Montreal Railroad, can be obtained for \$12, and the trip will repay any lover of nature, whether he drop a line to the fish, or leave them to "gang

I shall be pleased to give any person who desires any informa-tion in my power as to the sporting facilities in this region.:

D. C. RENWICK.

The Rennel.

SOMETHING ABOUT BREAKERS AND DOG BREAKING.

HAVING decided to break the dog to drop to shot, set about it in this way, still remembering to have the check-cord attached to the plain leather collar. Produce a gun, and allow the youngster, who will now be from eight to ten months old, to examine it after his own fashion. You may begin by firing off a cap, and then a little powder, but great care should be taken not to alarm him. During the firing process the dog should be kept lying down, in order to teach him to "charge." You will at once see whether your puppy is disposed to be come gun-shy, and if so you must at once bend all your faculties to get him over it. To accomplish this your judgment must be brought into play, and he must be handled according to his disposition. While the accustoming of the dog to the sound of firearms, at either a pigeon match or a rifle gallery, may do for some, others can only be conquered by starving, and then feeding at can only be confidence by starving, and then feeding at the report of a light load, the charges to be increased as the dog shows less timidity. Should your pupil prove a tough customer, couple him to another dog which has no such foolish fears, and will steadily "charge." The con-fidence of the one will impart confidence to the other. fidence of the one will impart confidence to the other. Fear and joy are feelings yet more contagious in animals than in man. We have known young dogs to become both gun and whip-shy at sight; in such cases the puppy can be familiarized by being obliged to kennet in close proximity to the article which he holds in dread. One or the other of the above methods will surely cure any young dog of the fear he may have for either the sound of the gun or crack of the whip; later on, however, when the dog has become older and more set in his "tricks and his ways," he will be very difficult to handle. It will then require both patience and tact to eradicate his terror. We would, however, suggest that no breaker give up his require We won require both patience and tact to eradicate his terror. We would, however, suggest that no breaker give up his task in despair without trying a very simple method, that is, of introducing a bitch, which is in heat, to the presence of the cowering subject. Let her be a participant during several lessons, and it will seem astonishing how much powder will have to be burned to produce a content.

retreat.

Until your dog is quite reconciled to the report of the gun, do not take him up to any one who may be firing. He must thoroughly understand that he is to crouch the instant he hears the sound. After a little persevenance you will succeed so well that you will not be obliged to even raise your hand. If habituated to wait patiently at "charge," however hungry he may be, before permitted to take food it.

He must thoroughly understand that he is to crouch the instant he hears the sound. After a little perseverance you will succeed so well that you will not be obliged to even raise your hand. If habituated to wait patiently at "charge," however hungry he may be, before permitted to take food, it is reasonable to think he will remain at the "charge," however hungry he may be, before permitted to take food, it is reasonable to think he will remain at the "charge," however, in the lessons, your young dog has behaved steadily and well, give him a reward. Do not throw it to him; let him take it from your hands. It will assist in making him tender-mouthed, and in attaching him to you. Dispense with the check-cord, and practice the dog in fields in which he is a stranger. Many dogs perform wonderfully well in their own exercise ground, but very indilferently where their attention is distracted by new scenes. For this reason, always insist that a purchase trial be held away from a dog's home. We have seen on their own dunghill many dogs that were considered "wonders," that would beat out a local piece of snipe ground to perfection, moving from each well-known spot to spot, and securing all the points, that were not worth a rap when worked on a new plot in a strange meadow. All dogs, and particularly young ones, should be accustomed to different scenes; thus, in giving your dog exercise, be careful to select different walks in your neighborhood, and at all times when he shall stray away from you make him hunt you up when he has gone astray and misses you. If you should adopt the plan of whistling and calling to him the moment he leaves your sight he will always have your position correctly located.

When the dog has been thoroughly tested as a good "follower," and has gained sufficient courage to run well always have your position correctly located.

When the dog has been thoroughly tested as a good "follower," and as gained sufficient courage to run well always have your opsition correctly located.

When the dog has been

and "on." It is unnecessary that we should state what these signals should be, betheving that they had better be left to follow naturally the orders as you way give them. It is really wonderful how quickly a dog will learn that the exchanation "Hat" is intended to check and correct bim. Few dogs are throughly broken to "heel," many handlors being obliged to repeat the order over a score of times in a walk of a short half mile. A common practice resorted to, to keep the dog behind, is to deal stealthy and Quilp-like back kicks at the poor brute, or swipe at him at unsuspecting moments with the barrels of the gun. A dog thus handled generally has his own way, or, when he does come to heel, follows many avaits behind. A dog should never be kicked or shaken by the ears. When the sportsman is unprovided with a whip he should make the dog lie at his feet several minutes, which the dog, cager for sport, will consider a severe punishment, and it is a sort of punishment not soon forgotten. Correction of this kind is much better for the dog than the thumping of clubs and firing of stones. When flogging must be resorted to, place his head between your knees and whip the after part of his body. The dog should be struck across, not along the ribs; or, in other words, the whip should not be made to lap around his body, but the blow should fall on the whole length of his back. In the above described position the dog cannot bite, and must receive all awarded him. Flogging a strong dog is no easy task; it requires much personal exertion in holding hun for the administration; it will put your nerves in a tremble, and be very

much personal exertion in holding him for the administration; it will put your nerves in a tremble, and be very likely to spoil your shooting. After you have been flogging him, always part friends, and never let him escape while you are chastising him; at least, if he does, do not pursue him, as if he sees (which he soon will) that he is the quicker runner of the two, all discipline will be at an end. Therefore, he thorough as you proceed in your task, end. Therefore, he thorough as you proceed in your tas if you would insure pleasant sport and avoid barbarity

THE NEW YORK SHOW.

THE NEW YORK SHOW.

A S April 12th draws near, the date announced for the closing of the entries, there is a corresponding increase in the labor of Mr. Lincoln and his assistants. Each mail brings such a large number of applications that the managers are forced to admit the very pleasant truth that in all probability the number of entries for this year's show will far exceed any exhibition of the kind ever held in this country. This is not all, for the high standing of the animals to be shown will surpass anything heretofore seen. In the early days, when bench shows were in their infancy, a competent critic could without much trouble pick out the winners in each respective class. This is not the case of to-day, and we predict that many of the leading classes will contain so many really splendid dogs that the judges will have no easy task to center on the premier favorites. The competition in the sporting classes will be particularly close; hence it will be the more interesting, as the dogs will be a rare lot to select from. It is surprising what great numbers of wonderfully fine dogs have been imported during the past twelve months, many of which were the valid of the Ronglish townels and over whose high price.

numbers of wonderfully fine dogs have been imported during the past twelve months, many of which were the pick of the English kennels, and over whose high price there has been no dickering.

Since last issue we have gathered the following items of news. Mr. John Davidson, of Monroe, Mich., was asked if he would act at the show this year as judge, but preferred being an exhibitor, and he has entered four of his erack does and will be wreent during the wide of the ferred being an exhibitor, and he has entered four of his crack dogs, and will be present during the whole of the exhibition. Dr. Jarvis, of Clarement, N. II., will exhibit his great firsh setter dog Elcho. This beautiful animal was bred by Mr. R. S. Greenhill, of the Irish rifte team. Elcho is six years old, and is the sire of Joe, Jr., who rau against Gladstone in the field match in December last. Dr. Jarvis has decided not to place his dog in competition, being satisfied, as well he might, to let Elcho rest on the laurets he has won in the nest.

Dr. Jarvis has decided not to place his dog in competition, being satisfied, as well he might, to let Elcho rest on the laurels he has won in the past.

Mr. Godeffroy, the enthusiastic proprietor of the Neversink Lodge Kennels, of Guymard, N. Y., has subscribed for fifty entry blanks, and purposes sending down a large delegation from his excellent varieties of stock. His pointer, Croxteth, of which we spoke in a recent issue, is said to be in fine trim for the coming contest. From the West the finest selection of large pointers in the country will be sent by the 8t. Louis Kennel Club. Bow is an old favorite, and winner of 1878. Faust is well known, and the bitches are said to be grand.

The Baltimore Kennel Club have promised to enter their well-known English and Irish setters and pointers. Mr. F. R. Bevan, of the English Kennel Club, who has judged with Mr. Lort, and also in the English field trials, is on his way here with a number of English setters and retrievers, described as being very handsome animals.

The setter Grouse-Dale, which won first in the puppy stakes and second in the brace stakes, at the recent Eastern field trial, was among last weed's entries.

The class of colleys will be a very fine one, thirty animals having been promised, the majority of which were imported during the past year. It is to be very much regretted that the Central Park Commissioners have refused to allow the colley, or sheep dog, trials to take place in the park, as they would uncolubted by have been and the park was the would uncolubted by have been and the park and the place in the park, as they would uncolubed by have been and the park was the place in the park, as they would uncolubed by have been and the park was the place in the park, as they would uncolubed by have been and the park was the park would uncolubed by have been and the park was the park and the park was the park went and the park was the park the park was the park the park was the park the park the park the park the park the park the park the park the p

regretter that the Centar 1 at a Commissionism and the fused to allow the colley, or sheep dog, trials to take place in the park, as they would undoubtedly have been an additional attraction to this year's slow.

Mr. Gibson, of London, Ont., the great short horn cattle-breader, will send a number of his recently imported

fox-terriers.

No special prize list will be sent out, as all dogs entered

No special prize list will be sent out, as an observered in the regular classes are eligible for the specials. Where the special prizes require separate entries, they can be made during the first day of the show.

Messrs, W. T. and J. Messereau, of Newark, N. J., present a double link, triple silver-plated collar, lined with russet leather and dotted with gold-plated cones, and a nickle-plated chain, or lead, which is to be awarded to the best pointer degor bitch, and is to be compated for to the best pointer dog or bitch, and is to be competed for

to the best pointer dog of bitch, and is to be competed for by winners in the open and champion classes. Messus, Battens & Ricc, of this city, offer an elegant silver cup, valued at \$300, to be awarded for the best col-lection of dogs owned and exhibited by one person or kennel club, both quality and quantity to be considered. Dogs from England and Scotland, from Canada to Texas, and Missouri to Massachusetts, have been entered, and the show, thanks to able management, promises be a grand success.

THE EASTERN FIELD TRIAL CLUB,—New York, March 30th.—Editor Forest and Stream:—A meeting of the

Eastern Field Trials Club was held March 9th. The constitution and by-laws of the club, as revised by a committee of three appointed for that purpose at a previous meeting, were read, and, after slight alterations, adopted. The action of the club, raising the initiation fee from five to ten dollars, was reconsidered, after long discussion. It was decided that until September, 1850, all persons desiring to become members, being duly proposed and seconded, would have to pay to the Secretarry, within thirty days of the date of their election, the sum of five dollars initiation fee, and on Sept. 1st five dollars additional for annual dues. After Sept. 1st, 1850, the initiation fee will be raised to ten dollars. Mr. C. H. Raymond read his report as last year's Treasurer of the club, and it was moved by Mr. Billings, and carried, that the statement be accepted, with the thanks of the club for his services. It was moved that the Secretary should receive a yearly salary of \$100, pay-able quarterly; resolution carried. Mr. Pentz proposed that a state amount should be paid for the use of Robin's Island; motion referred to Finance Committee. The Committee on Field Trial Rules had not finished their revision, and it was decided to receive their report at the mext meeting. The following gentlemen were present at the meeting; Dr. Aten, Messrs, Colburn, Greene, C. H. and G. B. Raymond, Herzberg, Ryer, Holmes, Billings, De Rongé, Coster, Mouroe, Morris, Pentz, Von Lengerke and Hall. The following gentlemen were proposed for membership, and will be balloted for at the next meeting of the club; Messrs, A. H. Moore, Garrett Roach, Georre Van Wagener, Charles Richards, H. E. Hamilton, W. H. Holabird and R. Lamb. Holabird and R. Lamb.

ENTRIES FOR THE FIELD TRIAL LERBY.

NATIONAL AMERICAN KENNEL CLUB. From March 25d to March 39th, 1880. (Entries closed April 1st, 1880.)

Meeting of the National Yachting Association, Wednesday, April 14th, at the St. Denis Hotel, New York; 8 P.M.

TIME ALLOWANCE.

A SSUMING that some definite conclusion has been reached Assistant that some dentine conclusion has been reaction as concerning a rule of measurement, the next step is to construct a table of the amount of time to be allowed by one yach another under the provisions of the rule. In this we can only be guided by the teachings of practice. There is no theoretical way out of the difficulty, no mathematical expressions by which we ean be guided. In short, the times allowed consist altogether of a compilation of observations in practice, a general mean of

| 6. 200(3), 8(0) 50, 0 (22) 18(25) 7 14(6) (3), 5 15, 28, 18 (3) 1825 5 170(134, 1), 2 10, 4 31 18375 5 170(134, 1), 2 10, 4 31 18375 10 220, 17, 0 3 34, 6 132 18500 10 220, 17, 0 3 34, 6 133 18525 11 21(6), 8, 6 3, 44, 6 133 18525 11 21(6), 8, 6 3, 44, 6 133 18525 11 21(6), 8, 6 3, 44, 6 133 18525 11 21(6), 8, 6 3, 44, 6 133 18525 11 21(6), 8, 6 133 | 122.1 15 122.4 15 132.6 15 132.9 15 133.1 15 133.4 15 133.6 15 133.9 16 144.1 16 154.1 16 155.1 16 156.1 | 45 0 47.2 49.6 91.8 51.2 56.4 |

which will be most likely to prove acceptable. It is customary to limit the observations to the differences in sailing between two limit the observations to the differences in sailing between vachts varying sufficiently from each other in the cloments upon

which the measurement rule has been founded, and from it to dee by ratiosa table of sufficient range to cover all yachts likely

which the housesteement that we have to cover all yachts likely to enter for a race.

It is certain, therefore, that the most equitable allowances will be obtained by referring to a long series of sailing matches between yachts differing as little as possible from each other in type, because in such matches extraneous advantages due to model or rig are climinated to the greatest degree, and the speed of one vessel over another, due only to differences of measurement, stands out in bold relief the least affected by irrelevant influences. With this in view, we are justified in citing British practice as a precedent, for in British waters racing has been developed with a finesse in detail and accuracy against which we have little to offer of a reliable and available sort in American oxperience. Our racing has been as yet too desultory in its nature, and records are very imperfect and too much influenced by local coloring to be accepted as a standard from which to draw fair and records are very imperfect and too much induceded by local coloring to be accepted as a standard from which to draw fair comparisons, excepting, perhaps, among the smaller craft, whose matches have been more frequent, and among boats of very similar model and outfit. Whatever may be urged against the tongage laws of the British Yacht Racing Association, no one has ever seen any grounds for questioning the accuracy and equity of their time allowances, either abroad or at home; nor do we think they would vary from the best experience in America. As something tangible to work from, they will serve our purpose as well, and perhaps better, than other more empirical standards.

aris. The Y. R. A. scale of allowances is computed upon the principle that the allowance of time given by a larger to a smaller vessel should be directly proportionate to the distance smalled, and increasing proportional to the size of the vessel—that is to say, if a larger can allow a smaller vessel ono minute on a particular length of course, she can allow her two minutes on a course of twice the length. Further, with regard to size, the assumption is that if a vessel of fifty ions can allow a smaller one any given time per ton of difference, a vessel of twice the size, or one hundred tons, can allow any latfice them.

These two relations will be expressed by the formula:

 $t = \frac{k l}{2l}$, in which t is the allowance of time per ton in seconds; k a

number whose value in the table has been taken as 30, on the supposition that a vessel of 30 tons can allow one of 20 tons one second per mile; I the length of the course in miles; and T the tennage of the vessel.

For a course of 20 miles, the formula, for example, would

read: $t = \frac{30\pi 20}{4}$. To apply this to the case of two yachts of 30 and 32 tons over a 40 mile course, we find from the formula, $t=\frac{30 \times 40}{31}$ 33.7 sec. as the allowance between 39 and 31 tons; and $t=\frac{30 \times 40}{32}$ 37.5 sec. as the allowance between 31 and

tons; and $t = \frac{0.0840}{32} = 37.5$ sec. as the allowance between 31 and 32 tons. The sum of the two will be the allowance of 32 tons to 30 over a 40 mile course, or Im, 16.2 sec. Having calculated the allowances for a difference of one ton by the formula as applied to vessels of all toningses from 5 up to 409, the difference of time for a greater interval than one ton has been tabulated by adding all the intermediate ones, so that ready reference can be made to the table.

We have arranged the accompanying scale to apply to the "three dimension" rule advocated in these pages, by the addition, in the second column, of the circumscribed solids equivalent to the toninges of the Y. R. A., and, further, in the third column, of the corresponding lengths on water-line of the average American yacht.

To apply this table, let us assume two wachts of 42 and 40 ton.

yaeth.

To apply this table, let us assume two yachts of 43 and 42 tons
or other corresponding elements of the measurement rule in
force, sail a race over a twenty-three miles course. Find the time
opposite the tonnages—the difference will be the allowance for
irm unles; multiply by 23 and divide by 10 for the course of
twenty-three miles:—

The tables above can be elaborated and expanded for practical use up to any tournage, and for any length of course by carrying out the simple work of multiplication and division at will, as in

MEASUREMENT.

Editor Forest and Stream :-

In response to your inquiry about the position we should take In response to your inquiry about the position we should take with relation to measurement of open bonts, it seems to me that we should follow the "Engitsh Corinthian Yacht Club" plan, which, as I understand it, is a measurement upon length only. In fact, there can be no great harm in this, because, as you say, open race-boats, which are built so as to get the greatest amount of speed out of them in smooth water, must always have considerable beam, so that they are essentially of one type. Length measurement when applied to one type is not unfair, and therefore no difficulty can arise in practice in applying it to open boats, from which nothing but speed is expected or demanded. It is invessible to use any other type of boats on many of our instruments. boats, from which nothing but speed is expected or demanded. It is impossible to use any other type of boats on many of our inland rivers, and when used in such places I am inclined to think that shifting ballast is a necessary sell. For instance, in the Delaware River, opposite Philadelphia and above that point, there are so many bars and shoals that open yachts with shifting ballast, as I know from experience, are best for a day's sail on the river, as well as in many other places—for example, at Albany, N. Y., or Haverhill, Mass., the same must be true. We ought to have some uniform measurement rule based on length for this particular type of yacht, and the National Association can be of benefit to them in that respect, because a uniform length

nave some unnorm measurement rate onsett on length for this particular type of yeach, and the National Association can be of benefit to them in that respect, because a uniform length measurement does not yet exist in this country.

I consider a yacht intended for river navigation only, and entirely open, or with the deck running a short distance abaft the mast, as in some respects safer with shifting ballast than with that which is fixed. I can remember, in my own experince, when, through the stupidity of a negro and his fright during a squall, I was overturned in an open yacht on an inland river in South Carolina. Had my ballast been stowed and secured I should have gone to the bottom, but ask twas shifting—consisting of sandbags, etc.—the ballast went overboard, the yacht floated, and we were saved without even wetting ourselves to any great cattent. It is not a year since a small open boat in Salem Bay, went down so quick, on account of fixed ballast, in a sudden squall, that two worthy young men were drowned, although help resched the spot within fixeen minutes.

I conclude, therefore, that while shifting ballast and great com-

parative beam and little depth may be best suited to much of our inland and smooth water navigation, and in such cases more or less shifting ballast may be desirable on the score of safety, yet the same characteristics would be as absurd for a sea-going or deep water yacht as a considerable draught of water would be for sailing in a river filled with sand-bars. The National Association can be of value to our river clubs as well as to our sea or lake clubs, and no small part of its value will be in the establishing of rules which will mark the distinction between these classes of yachts, and give to each that measurement and those regulations which shall be adapted to yachts used in different kinds of waters, justs as these yachts have been adopted by experience on account parative beam and little depth may be best suited to much of our which shall be adapted to yachts used in different kinds of waters, just as these yachts have been adopted by experience on account of the necessities of the waters which they are to navigate. In addition, auppose the open river yachts are to have a measurement based on length, and are permitted shifting ballast, a regulation should be used that they have no booming out of ballast or men to windward of, or outside the limits of, the hull in a race. This would prevent the development of a type of river yacht which is good for nothing. It would render such river yacht sufficiently seaworthy for the waters in which they are to sall, in the same some that a yacht which is good and the property of the waters in which they are to sall, in the same some that a yacht which is to unavirate ones and done which is good for nothing. It would render such river yachs which is good for nothing. It would render such river yach sufficiently seaworthy for the waters in which they are to sail, ir the same sonso that a yacht which is to navigate open and deep water would be rendered seaworthy by being debarred from using shifting ballast, having reference to the waters which she is to navigate

One thing must be always remembered in looking to English rules and experience in yachting. They have no such extent or shoal water navigation as exists upon our scaboard, and therefore they can afford us but little assistance in devising regulations for

they can afford us but little assistance in deviaing regulations for yachting in such waters.

American yachting originated in such waters, and developed a class of boats and system of measurement adapted to them. It is only when the extreme of this type of yacht and horrules of measurement are attempted to be used in going to sea, that their incapacity for such service manifests itself, and it is only in the latter case that a new type of yacht, or rather a modification of the former type, together with a system of measurement which induces the apparature of a system of measurement when induces the construction of such modified yacht, becomes desirable and necessary.

DAVID HALL RICE.

Boston, March 29th.

Editor Forest and Stream :-

Having read with much interest the discussion in your column on the subject of yacht measurement, I feel constrained to add my mite to the general fund. In the first place, it seems to me that a universal rule of measurement for keel vessels and centerboards would be unjust; and further, the same rule could no boards would be unjust; and further, the same rule could not be fairly applied to large schooners or to small sloops, the former, say of five tons and up to thirty, and the latter from eighty tone and upward. The keel boat depends on ballast for her stability to a much greater degree than does the cenier-board craft, hence we have entirely dissimilar qualities to deal with. Therefore depth should unquestionably form one of the dimensions of keel vessels, and the formula for measurement should include length breadth and depth, a tolerably fair and easily worked rule for what is already in existence—that is, for measuring small craft. So with regard to small center-boarders, the existing walk for So with regard to small center-boarders, the existing rule (or a all events the old rule of the English Yacht Racing Association namely, length and beam, has been found to be very satisfactory in these waters. In this class of craft it would not do to measure depth, as thereby a dangerous style of "skimming dish" would be called into existence, and by the consequent tendency of such depth, as thereby a way, and by the consequent tendency of such machines to upset easily, the sport would be rendered unpopular and cease to be what it now is, namely, a most valuable school in naval architecture. As to large vessels, it does not seem reasonable that, as under the present New York Yank Club rule, a premium should be put on unscaworthiness by penalizing free-board. The rule, length, breadth and depth, with the provision that the provision of the depth shall be taken from the load-water line only, would, it board. The fuller, breasti and depth, with the provise that depth shall be taken from the load-water line only, would, it seems to me, put all on a fair footing and prevent the building of any more Mohausks, or the unjust penalizing of such fine craft as Intrepl. Cubic contents is perhaps the fairest plan of all in theory lat that failed in practice, being not only too complex, but, as was abundantly demonstrated in your columns unfair and calculated to invite disasters. The methods which I propose have at all events the advantage of being so simple that any measurer can east up a reasel's tennage in a few minutes, and they would have the further advantage of allowing buildors. to model as they chose—whether cod's bend and monkered tall, o eel's head and catalia stern—without pensity. In fact, tit would free modelers from a threldom which now cripples their effort, and result in an improvement in modeling-skill which certainly has not developed much in the United States for the last birty.

As to the idea of length measurement. I say it is simply ridion. use and unworthy of consideration by any intelligent person the knows anything of the subject.

Believille, Ont., March 28th.

Editor Forest and Stream:—
In your issue of the 18th inst. you state a very plain, mathematical problem that seems plausible on the whole, but I take excep-tional objection to it. If all yachts were measured by cubical contents there are many that would be certainly handicapped by

nch a rule.

The sloop Gael, by her queer shape and light displacement, would be allowed time by smaller boats who now by our classification do not sail in her class at all, or if they do it is by invitation or by accepting the limit of size that the class calls for

accepting the limit of size that the class calls for. There certainly would be an injustice in this case and many others of similar kind. No matter where you go, you will always find people trying to evade the rules that are used at the present day for allowance of difference of size. Builders recognize the importance of a few extra inches of length and are not sle importance of a few extra mones of length and are not slow to take advantage, whon their reputations are at stake, even at a loss to their pockets. I have been conversing with pretty level-headed yachtsmen, and I find none but what admit that length gives speed. If we adopt your method you certainly will revive the skim-dish model for racing. There are no laurels to be won in skim-dish model for racing. There are no haurels to he won in cruising unless they are created hereafter. Lots of people who own fast boats do not care to drive them on a cruise. The light sails are usually discarded as incumbrances. These very same people will allow you to pass them in ordinary sailing and set you down as a nonentity if it is reported ashorey.

In England, if I understand their rulings, here are classes made

by tonnage. This may seem fair, but still it is not if a man de-sires to race. One person might desire to have plenty of free-board, a little more beam, and less length; he finds after his boat board, a little more beam, and less length; he finds after his boar is built that she is comfortable and speedy; tons perhans 5 50-100 is built that and is comfortuble and speedy; tons perhaps 5 50-100. Another one, envious of the laurels that have fallon to the skill and pluck of his predecessor, figures and maneuvers to get a longer beat of the same capacity; which he result. He comes out in the spring longer, a little wider, cut away considerably to make light displacement, and to look at is considered a poor sample of a yacht. He finds on trial that his boat is cranky and un. safe in fresh winds, but is a skimmer in light zenbyrs. He bauls ner up and puts a ton of lead on the keel and he finds that he an now carry more sail on his phantom ship. She wins prize after prize during the season. Why? Because our races are sailed in pleasant and calm weather usually.

sailed in pleasant and calm weather usually. If I were so fortunate as to own a 10-ton cutter and I considered her so perfectly safe at sea as we read of, I would turn her head for the open sea, and I would sink the land from sight and prove her qualities if it took a week to do so; but I am digressing from my subject. From what I have illustrated above, do you

my subject. From what I have illustrated above, do you not think that "length, breadth and depth" mensurement would force us into the same trouble—say building cranky boats? By our present "Hore-shoff" table a man can build comfortable, weatherly boats and not be handlenpped by a skimming dish. The only obstacle to fight is shifting bullast; when that is done away with there will be more serviceable yachts and better

Yacht builders in this country are no fools. If they are left to heir own conclusions they will not use excessive beam nor gedisproportionate depth. They will invariably do their level best

unsproportionate depth. They will invariantly do their level best and produce some very fine workmanship.

As I have said in my previous letter, give a man for classifica-tion extreme length and restrict him to nothing but shifting by dead-weight. That is the fairest method, and a man's fault will lie in himself if he does not get a proper construction, and not in is neighbo

neignbor. 98lon, March 29th.

We are afraid our correspondent is going to work the wrong way. Practice has shown that length measurement encourages abnormal beam and handicaps easy models to such an extent as to drive them out of existence. In what manner has already been shown in these columns.

NEW BEDFORD VACHT CLUB

Editor Forest and Stream :-

Thanking you very much for your interest in, and kind notices of, the New Bedford Yacht Club, perhaps a few words concerning our proposed future movements may be of interest to the yacht-

our proposal future movements may use of interest to ing fraternity. I take the liberty of forwarding the sai Contracts have been signed for the erection of a pile two-story club-house from the south side of the brid to Fairbayen, near Pope's Island. The building will be 40ft, by 25ft. will have double piazzas eight feet wide on the east, south and with investigate plazers eight feet when of the east, south and weets sides, from which a clear and unobstructed view down the river and across the bay to the Elizabeth islands will be had. A tower, 13:12, on the southwest corner, with ample look-out windows, 40ft. from low water mark, will probably enable us to see over Clark's Point all vessels entering the bay from the west ward. The lower story will be conveniently arranged for reward. The lower story will be conveniently arranged for recep-tion-rooms, lookers, row-boats, etc.; so that the upper hall will be wholly available for club uses. A plank walk-way across the bridge will have cars passing our doors on the north side, with an unobstructed sea view on the south, and on all sides free chan for cooling breezes. We think our location cannot be surpassed

on the coast.

We propose showing from our signal staff two (horizontally placed) red lights as a guide for all who, arriving at night, may wish to anchor off the club-house, where nine feet of water may be found at low tide

or found at low tide.

Our club have added thus far this spring 150 new members, making a total of 250, and we confidently look to a membership of 250 by the middle of the yachting season.

We propose to keep open house for all visiting vachtsmen and We propose to keep open house for all visiting yachtsmon and their friends, and hope they will all consider this a special invita-tion "to make themselves at home" in our now quarters, where all information conductive to making their stay in our waters agreeable will be cheerfully given. By the opening of a new channel through Wood's Hole, yachts from the esstward of left, draft can safely pass through into Buz-

and a making a good and expeditions run into this zard's Bay, thereby making a good and expeditions run into ome harbor without the necessity of going west to Quick's Hole. When our house is built and we obtain the necessary ranges I will take the liberty of forwarding them to you, so that our yacht ing friends may be fully posted as to anchorage off club-house. if befogged. ACESHNET.

In point of membership the New Bedford Y. C. now leads ever other club in America. For enterprise displayed in the right direction its management is an example for others, and conclusively shows that the material can be found for the formation of strong clubs, with income enough to make themselves felt as an element of the community at large. New Bedford, through the exertions of its yacht club, has now become the yachtsmen's paradise "down East."

IMPORTED VACHTS.

or Forest and Stream :-

Allow me to add another bit of information to that given by you In your sensible remarks on "Imported Yachts" in last issue You say: "We have received, through the kindness of the Secretary of the Treasury, the following authoritative announcement an observance of which virtually denies imported yachts over 2 denies. tons the right to fly the American flag, and compels them to take out papers, etc., from the Old Dominion, hall from abroad, and sail under the protecting blue of II. M. Colonies of the North. Now the imported yachts could not even manage to do that un-less their owners belonged to the only yacht cituk [Hritish) on the lakes holding an Admiralty warrant, viz., the Royal Canadian and even then the Admiralty would not grant the special warran that each yacht must carry unless the owner were a British subnt to fly the blue ensign on an imported yacht was refused ject and in a Briesh port. I know that an application for a war-rant to fly the blue ensign on an imported yacht was refused on these grounds by the Admiralty. As every yacht owner cannot be expected to go to the trouble and expense of getting a special ast of Congress, as Mr. J. G. Bennett did for the Jeannette adora), the only remedy is what you suggest, a change in the Not a very great concession to yachting surely.

ROUGH CROIX.

STEAM MANTRAPS.

Editor Forest and Stream :-

The cutter being dead, and I trust (as probably do most of your yachting readers) forever buried, my interest in the nondescript has ended. In fact, this cutter-sloop discussion ceased possessing charms for me when I realized the fact that it had degenerated from seemly debate into a meaningless wrangle and abuse

from seemly debate into a meaningless wrangle and abuse of the two types of boat. Regulac (culter) in pace!

By the by, I notice that "Qui Vive's" cats caught fits (in an editorial way). Well, they have probably recovered their equilibrium by this time, andiat any ratto I suspect they will be as able to sewatch for themselves in the future as they have done in the

And now I would like to say a few words on a subject which I And now I would like to say a few words of a subject which is think has been but lightly touched upon in your widely-circu-lated paper. Our "steam launches" are dangerous mantrapa; there's no denying it; and something should be done to remedy there's no denying it; and something should no done to remedy the evil, as they are a class of bost for which there is a constantly growing demand on our waters. I have reason to believe that the evil has aften something in the following way: A gentleman de-sires a launch, goes to the builder, asks his price, and at the same time says "my boat must be very fast."

The builder knows that he will lose his customer if he names a

price that will honestly build a room poat, which shall be sea-worthy and fitted with power sufficient to get speed out of a safe eraff. So he takes the work at a figure that retains his customer, and in order not to lose money, yet at the same time desiring to produce speed, he designs a model too deep to be anything but

produce speed, no designs a model too deep to be anything but cranky and too narrow to be either confortable or seaworthy. Yet there is not the least trouble embraced in producing a steam launch or yacht that shall be fast, reasonable in price, seaworthy, as any sulling yacht of her size, and with all the extra comfort that breadth of beam gives. Who, then, is to blanne for the fact ant our yechtsmen are imposed upon by the unseaworthy shells ulled launches? Think it over.

THOMAS CLAPHAM.

We cannot be responsible for derelletion of maliservice if money removed the proposed of the paper and the proposed of the paper that may not be read with propriety in the home circle.

REMOVAL .- On or before May 1st the Forest and STREAM will remove into its new offices in the Times building, Nos. 39 and 41 Park Row.

WILD RICE.—We have received from Mr. Chas, Gilchrist, of Port Hope, Ont., a sample of the wild rice secured by him, and furnished for sowing in ponds, as was noticed in these columns some weeks since. The seeds are plump, well developed, and evidently in excel-lent condition. As the success of the undertakings to introduce this cereal into ponds is becoming more generally known, the demand for the seed is largely increas-ing. We are in receipt of several inquiries for the supply of the same; and as the harvests gathered by our friends have long since been exhausted by the orders received through their advertisement in this paper, we can only counsel patience until a new supply can be secured next season. We hope that those who have the facilities will make special efforts to gather a quantity which may prove sufficient.

NATIONAL AMERICAN KENNEL STUD BOOK, VOL. II.-In another column we notice that the entries for this much needed record book will close May persons owning well-bred setters, pointers, mastiffs, Newfoundlands, terriers, colleys, greyhounds, spaniels, St. Bernards, pugs, beagles, foxbounds and all prize-winners or well-bred household pets, good field dogs and handsome canines of every description, will find advantage and satisfaction in entering them in the National American Kennel Club Stud Book. For future reference these entries will be invaluable to dog owners and breeders, as they constitute an official record, which may always be referred to as authoritative, and will be especially advantageous in tracing the pedigrees of the posterity of the dogs entered as of the present year. All entries should be addressed to Mr. Charles De Rongé, Secretary, No. 51 Broad street, New York.

-Mr. Fred. Mather has permanently left the paper with which he has for some months been connected as editor of the fish and fishing department.

-At the meeting of the Directors of the N. R. A. on Tuesday last, the Palma conditions were altered to permit shooting by a British team only. It was also agreed to send a team of six men to Ireland to resume the Irish-American matches. No spring meeting will be held this year. A full report of the action taken, with amended conditions of the "Palma," will appear in next week's Forest and Stream.

TROUT AND TROUT.

WHEN good Father Prout, of blessed memory, wearied of his Lenten diet, he cast a ham bone into the sea and drew it forth again; and by that token, forsooth, the flesh land become fish, for whatever comes out of the sea is neither flesh nor fowl, but fish. Now, no one for a moment supposes that by this ingenious bit of strategy the worthy old priest tried to deceive, or did deceive, his palate as well as his conscience. Such a feat of gastronomy and imagination has been left to our own day of wooden nutmegs and artificial trout ponds. We cast liver into the water and haul it out as trout; but, not stopping here, we rush to the market slabs, where lie in ignominious rows the alleged Salvelinus fontinalis, scooped and netted from the ponds, pay a royal price for the scaly prize, and then, perpetuating the delusion, roll the insipid morsels about in our mouths with the costatic and pitiable fancy that they taste good. Prout was ingenious, so far as ham goes; we are far ahead of him.

We are aware that we are preaching old fogy and unfashionable doctrines-sentiments which will find little sympathy among the deluded fish-eaters, who fancy themselves epicures, judges of what is what, and think that they know a trout when they taste it. They never did cat a real trout, or, if they did, it was so long ago that they have really forgotten how the fish ought to taste. But the books say that trout is a delicacy; the dealers affirm that these speckled monsters are trout; hence, logic is logic, and they smack their lips with satisfaction, and discourse over their glasses of the glory of America's

This liver-fed sluggard, intrenched in his pond, is gaining ground; he reckons his blind adherents by constantly growing legions. And the true trout—the fish that you and I know, reader—is being pushed to the wall by this fat-bellied parody. The wild streams are becoming "fished out;" even the rainbow-hued fellows in the streams, which only we two know of, by and by, when another shall have stolen our secret and our fish with it, even they will be supplanted by the great, coarse black bass-"the fish of the future," they call him.

Yes, we are undoubtedly on the losing side; but here let us make a stand, utter a word of protest, and linger, even though but a brief moment, over the trout as nature made him. Some of us have met him in his native pool, years ago, before men knew anything about these adulterated abominations, these animated masses of hashed liver and deception. This fish has been for years battling in the fierce struggle for existence; he has gathered strength and muscle and bravado from a thousand tussles with the dash of the waters; what he has eaten he has worked for, and the constant exercise of looking for his dinner has hardened his body and made it compact and firm of texture; the natural food provided thus for him has been transformed into juicy, sweet-flavored flesh; and now, in the pride of his strength and years, he is a fit subject for your costliest tackle and the best skill you know how to put forth. If you have been for years learning how to take a trout, so has he been for years unwittingly preparing for that battle, and you may count on a test of your patience and of your line and rod and wrist, before he will lie panting in your basket, conquered and captured.

It is mortifying the flesh if, when you come back at night, you pretend that such a fish as this was not born into his mountain home just for your own platter and palate. "Catch your hare before you cook him" is good advice for Simple Simons, but it means more than the bare advice to an idiot that the first essential to a dish of rabbit is the rabbit. It means that to enjoy the flavor of a trout you must catch the fish yourself; this adds a delicate taste that the most ingenious chef, with all his skill, cannot command; a satisfaction that money cannot buy,

THE NEW YORK RIFLE CLUB.-Gilt-edge gallery practice has been the aim of the New York Rifle Club, and those who wish to see the simple feat of popping the bull's-eye reduced to a fine art may visit the rooms recently fitted up at No. 211 Fourth avenue, in this city, and inspect a pair of target tunnels of the very best description. It is a club in earnest, with a club room. and all made subservient to the main object of the club, which is the culture of its members in the art of off-hand shooting. On entering, the visitor is in a parlor, or re ception room, with its piano and soft, yielding carpet, its heavy window curtains, claborate chandelier, bronzes and works of art displayed on the walls. Adjoining this is another room, scarcely less sumptuously furnished. Done up in the obtrusively naturalistic Eastlake style, the room suggests use without fear of consequences in breakage and scratching. This is the shooting room, and from a platform in the corner the marksman may look into the gaping mouths of a pair of tubes of sheet iron, about a yard in diameter, and suggesting a gigantic binocular. These are elevated above the floor, so that the entire floor space may be utilized. After about a dozen feet of iron tubing the shooting tunnels change to a square focus, with three feet a side, interior measurement, and so stretch away out from the back of the building until ninety-six feet is reached from firing point

to target station. The target rests in an iron frame, just large enough to seize the pasteboard sheet on all its edges, so that the bullet passes directly through to a slab of lead fixed behind. This target frame is fixed upon a small car, and by winding a small winch below the tunnel frame the car is brought up abreast of a small door on the side. This door is made to swing toward the firing point and to the interior of the target. Sheathed with iron, it will stop any bullet fired from the gallery end while the door is open. Diaphrams prevent low firing and hit-ting the tramway car, while the smoke of the firing is drawn off by a smokestack, made to communicate with the chimney near by.

With only thirty members on the roll now, the club will no doubt soon reach its maximum of 100 members. Even now the rooms have become the center of rifle news in the city, and a very popular, pleasant place the club-room has grown to be.

NATIONAL AMERICAN KENNEL CLUB DERBY,-We publish in our Kennel columns the full list of entries to the N. A. K. C. Derby stakes for puppies born after April 1st, 1879. Over one hundred entries have been made, with their forfeit money of \$5 each. We congratulate the managers on such a rousing send off for their first puppy Derby.

PRACTICAL HINTS TO SWIMMERS,-Prof. Marquis Bibbero, of the Royal Polytechnic, London, Eng., gave an exhibition of swimming on Friday last at the Central Park Bathing Establishment, this city, which probably has never before been equaled in this country. His programme contained nine parts, the majority of which were full of instruction, and contained many new and useful suggestions to both tyros and experts, treating of 'How to act in case of shipwreck," illustrated; "How to undress on the surface of the water," "Useful swimming," showing the different variety of strokes; "How to breathe while swimming, and how non-swimmers may save their lives;" "Easy ways of turning in the water on back and chest," was the Professor's amusing way of showing a "learner's difficulties without a teacher;" "Ornamental swimming," "Swimming with hands and feet bound." Parts 7 and 8—"Submarine feats," "How to save a person from drowning," "How to break away from the grip of a drowning person," and "How to restore the apparently drowned"-were the most useful parts of the exhibition. The Professor, using his attendant for a drowning person, showed that a single lock of hair was sufficient to draw the floating body ashore with, if the person retained sufficient presence of mind to keep quiet. If the person struggles, as is usually the case, he should be approached from behind, his head held on the rescuer's breast, and both go ashore on their backs, drowning person frequently grasps his rescuer, and endangers both their lives. In this case, if his head can be got under the surface again for a few moments it will confuse him, and breaking away is comparatively easy. Should he grasp his rescuer by the wrists, a quick wrench of the arms will break his hold. Should he grasp him from behind, his hold must be loosened by wrenching back his fingers, as in ordinary cases. When the drowning person gets his arms firmly clasped around his rescuer's neck or around his waist, or gets any other dangerous hold, the rescuer may instantly free himself by putting two of his fingers to the drowning person's nostrils, and thus forcing his head back. This will make a man loosen any hold, in the water or out of it. drowning man cannot keep his grip when this plan is resorted to.

WOODMONT ROD AND GUN CLUB.-The Woodmont Rod and Gun Club, of Washington, D. C., have purchased the well-known tract of land bearing that name on the Potomac, near Dam No. 6. The estate secured there consists of 2,000 acres, and affords magnificent cover, which abounds in turkeys and pheasants, and every variety of smaller game. There are also some deer on the property, and these will be protected for a few years. The grounds front on the Potomac, and on the Virginia side of the river the mountains rise abruptly, and these are full of deer and turkeys, which cross over to the club's grounds to feed. Here, too, is the finest black bass fishing on the Potomac River.

The Woodmont Club, which has been recently organized, has a membership limited to twenty-five, and on its rolls are the following names of prominent gentlemen in Washington: President, A. H. Evans; Vice-President, Gen. T. C. Drum; Treasurer, Major J. O. P. Burnside; Secretary, J. B. Church; Admiral Ammen, U. S. N.; Commodore Earl English, U. S. N.; Parker H. Page, R. K. Evans, Commander R. D. Evans, U. S. N.; Commander Henry Taylor, U. S. N.; Major Marcellus Bailey, J. M. Tinker, W. H. Doolittle, Assistant Commissioner Patents; Gen. A. E. Paine, Commissioner Patents; Major Frank Taylor, U. S. A.; H. A. Seymour, B. E. Ellis, H. S. Nyman, B. F. Guy, A. W. Crossley, M. C. McIntire, Judge L. Hill, Major Justus J. McCarty, Thomas Russell,

Notes .- We made mention sometime ago of the interment of a favorite dog in the owner's private lot in Greenwood Cemetery, a proceeding which attracted some attention at the time and much unfavorable criticism. So many written and verbal remonstrances were made to the trustees, and so much intensity of feeling was manifested on the subject, that hereafter the interment of any brute animal in the cemetery will be prohibited. This is altogether sensible; the holiest and most solemn of all human experiences should not be parodied by sentimentalists

A most seasonable publication is the "Traveler's Official Guide" map, which is furnished as a supplement to the standard hand-book, now put forth by the Na-tional Railway Publication Company, 46 Bond street, New York. This map shows the railway connections of the whole country so clearly that one may plan out his route with a moment's glance. We have had the "Official Guide" in our office for years, use it constantly, and have never yet found its information erroneous. turn to it as often as to the City Directory, and always find what we are looking for.

Prof. Tarleton H. Bean, of the United States Fish Commission, will go to Alaska next month, charged with an investigation into the character and value of the cod fisheries of that coast. This mission is undertaken at the instance of Prof. Baird, who thus proposes to determine the relative values of the Alaska fisheries, as compared with those of Newfoundland and Labrador.

Thomas Bell, the English naturalist, who was the auther of numerous works, among them the "History of British Quadrupeds" and "British Reptiles," has just died at the ripe age of eighty-seven. Mr. Bell's home for some years had been at Schorne, and in the very cottage occupied by Gilbert White. Mr. Bell took great delight in making himself familiar with the haunts of the kindly old historian of Selborne, and was never happier than when pointing out to appreciative friends the grounds-preserved so far as practicable-just as White had left them.

"Jacobstaff's" admirable description of decoy goose shooting, published last week, is one of the most graphic and intelligible papers on the subject in print. Even should a gunner return luckless and duckless from a trip to Good Ground, he would be more than repaid by the study of the tame geese, which display a cunning and duplicity worthy of those human creatures known among men as "stool pigeons,"

BARRUDA.

AN IMMENSE GAME PRESERVE.

St. THOMAS, W. I., March, 1880.

HAVE taken the little island of Barbuda, in latitude 17 deg. 30 min., for description, and my readers must nagine themselves transported backward some two years to the time of a former trip in the month of August, 1877.

This island is one of the northern Caribbees. as it is, and having no communication with the world save by small sailing vessels, it is one of the most attractive spots to a sportsman in the West Indies. Its fame is world-wide, and hardly a British man-of-war has visited the Lesser Antilles without making up a party from its officers for a week's sport at Barbuda. Like those other English islands so closely resembling it in name -Bermuda and Barbadoes -- Barbuda is of coral formation, and possesses the barrier of reefs of the second, but not the open bays of the first.

At the river landing where you disembark is a martello tower of solid masonry—a relic, it is supposed, of Spanish occupation centuries ago. A flag is hoisted upon this tower when a vessel arrives, and you await the arrival of horses from the village, three miles from the landing. They come galloping down the lane in charge of a daredevil darkey, and you mount and ride up to the house through a wilderness of sea-grape and beach-plum, and between great fields, in which graze herds of horses and cattle. Wild pigeons flutter up from the scrub, and wild guinea fowl fly across the fields, causing one to indulge in pleasant anticipations of sport on the morrow, the house you are ushered into a hall so profusely adorned with guns, rifles and hunters' equipments that you are prepared to receive the warm welcome extended by the burly Yorkshireman, Mr. Hopkins, and later that of his copartner, Mr. Cowly, the clergyman. The house overlooks a vast lagoon, called "Flamingo Flash," on the shores of which are the battlemented ruins of the dwellings of the first proprietors, having such a Spanish, or Moorish aspect, as to suggest the idea that there were dwellers here before the English occupation. Circular towers flank the fortress-like structure, pierced, like the latter, with loop-holes. Notwithstanding, it may have been built by the good Col. Codrington, upon whom the island was bestowed in 1680, and who was later the founder of a college in Barbadoes. For many generations this island remained in the Codrington family (it has

the best they could to develop its resources, and spent vast sums of money in their endeavors to make it a fit place of retreat for an English nobleman, is abundantly evident. There are fields a mile square, surrounded by solid walls so high that even a deer cannot jump them, with gate-posts of masonry, square and massive. Heveral of these fields, once well cultivated and yielding good crops of corn and cotton, are now abandoned to the goats and guinea fowl. Only in the days of slavery, when labor was cheap and abundant and crops remunerative, could even a wealthy family like the Codringtons build in this sequestered island such durable inclosures. living evidences of the thrift and foresight of the early Codringtons in the multitudes of cattle, horses and deer that roam in the vast fields and browse in the scrubby tracts. Barbuda is noted for the excellence of its horses many of which are sold in the neighboring islands. Tt is related that the original stock was from a noble strain of blood, that the great-grandsire of the hundreds that now roam these fields was a pure Arab stallion. This may be well believed after an examination of some of the horses and colts here to-day, for though smaller than the ideal horse of the North-owing to the mixture of native blood-they are perfect in shape and full of fire and energy. The deer that may now be numbered by thousands doubtless originated from fallow deer imported from England rather than from the Maxican vari-This I judge to be their origin from those that I examined, shot while I was there, and from a collection of antlers and skulls sent by me to Washington. the original stock they have multiplied until they cover

Not the least attractive, to a sportsman, are the wild guinea fowl, which, escaping from captivity at an early period, have increased so that they now roam the island in large flocks, and undoubtedly are much more numerous than the deer. With their freedom they have regained that wildness peculiar to them in their native African jungles, and more wary birds, keeper of sight and ear, have never been hunted.

The island, though small, is so well covered with thick scrub that it is difficult to hunt through it, and hence every animal that has been introduced for domestic purposes has run wild, and there are, besides deer and guinea fowl, wild goats, sheep and hogs. These, with the large flocks of plover, curlew and duck that visit the island in the winter season, and the great number of doves and pigeons resident throughout the year, added to the great variety of fish to be caught in the lagoon, make life here almost to realize the sportsman's dream of delight-the elysium of his happy hunting ground. The two good Britons holding the lease of this island are worthy rep resentatives of their country. Mr. Hopkins had passed several years stock-farming in Australia, and was well calculated to conduct successfully an enterprise like this, and make remunerative his little kingdom, with its area of seventy-five square miles and nearly a thousand sub-There are but three white men resident on the island, though there are about eight hundred colored and black inhabitants, who gain a livelihood by cultivating the fields of the proprietors, fishing and wrecking.

The morning after our arrival, at daybreak, we each found a little darkey waiting at the gate to conduct us They led the way past the negro village to the fields. and over a wide common to the first inclosed field, where we separated, my friend taking the lane and myself the wall running toward a thick wood. We had covered several miles before we saw the first flock, a dozen or more feeding in the thin grass. Noting the direction they seemed to be taking, I crept carefully from bush to bush, crawling close to the ground after the most approved style of bushwhacking : but when I ventured to raise my head they were two hundred yards away in another direction from the one I was pursuing. They saw me, too, as I arose, and were on the wing in an instant, sailing over the field like meteors. Then we made a long journey through abandoned fields to the woods, where were little inclosed gardens-the "grounds" of the negroes—where they raised what some Americans would call "garden sass." Here the style of hunting was dif-Here the style of hunting was different, and I thought I should certainly avenge myself with great slaughter, for I had only to keep perfectly still, crawl up to a chink in the wall, and, if there were any birds there, arise and fire as they got up. But I had first to find the fowl (no easy matter, as they run and hide like quail), and then to drop them as they arose (no casy matter either, as they get up in such a hurry that it is a wonder they don't leave their feathers behind) Three times did I approach three different walls, and six times did I discharge my gun at the up-darting forms of as many guinea fowls, but without saving even a feather. In despair I looked at my gun, the same gun with which I had shot turkeys and quail, ducks and ployer and spine in past years, and everything in these islands from a humming-bird to a wild hog, and which had never failed me before. I sat down and looked at it. There it was, the same symmetrical stock of walnut, the broad-breeched barrels, twelve-bore and twenty-eight inches in length; the perfect mechanism that opened and closed the breech so tightly did not admit the escape of a particle of gas. lately been returned to the Crown); and that they did It was as good a gun as Fox, of Boston, could make me

for my work, and I knew the fault must lie in me or in the birds. I tramped back to the house with a heavy heart; nor was I at all mollified when, meeting my friend with a brace of fowl, I missed another shot at a single bird which went sailing by, Not this alone, but my companion, a quick-eyed shot, dropped the same bird at I saw then that I had been shootforty vards distance. ing behind the birds, their large size and velocity of flight deceiving me.

Barbuda is so nearly level, in all except the eastern portion, that a heavy rain floods the surface at once. But the water is soon absorbed into the porous lime stone; and during the dry season, there being no springs nor streams. there are few ponds or even moist places. In these ponds the water is brackish; but to them flock all the birds for miles about, at certain times of the day, to drink. One of these shallow ponds, known as the "Bull-Hole," was the favorite resort of doves and other birds, and I rode out one afternoon with the proprietor to collect dovos for specimens and for pies. At 8 o'clock they commenced to come in, and we dropped them one after another until there were forty to three guns; and many more could have been shot.

Toward sunset, one evening, Mr. Hopkins ordered horses, and rode out with me into the scrub to watch the guinea fowl as they went to roost. For an hour before dark they commence to come in from all directions, concentrating in the copses of high trees, and even roosting in single trees in the open fields. They keep up an incessant calling to one another, and one might think it the easiest thing in the world to pot any number of them at that time. But let it be remembered that they keep their ears open as well as their mouths; and the wider they stretch the latter, the more they open the former. With a well-trained dog, they are as easy to capture as the ruffed grouse, for they are at once driven to tree; and if the dog pursues and barks continuously at the foot of the tree, they give him their whole attention. hunter has only to creep within shot and single out the lowest one of the flock and fire. It is said that he can sometimes secure half a flock in this manner, as it is related ruffed and spruce grouse have been obtained before the balance take the alarm. He must, however, be securely hidden, as, though their ears are sharp, they depend mostly upon their eyes. The guinea fowl had begun to assemble, but so wary were they that they would invariably discover us and dash out on the opposite sides of the trees before we could obtain a shot. At last, long after the sun was gone, I heard one calling. Carefully working my way through the dense thicket I approached him. There he sat, with his small head and neck outstretched, some fifty yards away. I could get no nearer; the remembrance of the morning's defeat and the afternoon's indignities could not urge me through that thick, thorny scrub with sufficient caution to escape his sharp eyes and cars. So I watched a chance, when his head showed against the sky (though his dark body could not be distinguished from the leaves), and fired. I did, brother sportsmen; I potted that bird in the most contemptible manner. And you would have done the same, had you spent two thirds of a hot day in August (a West India August day, at that) in chasing his brethren over scorely ing fields, and wasting your powder and adjectives in firing two feet behind every one you put up. nothing but exultation in my heart as I picked up that bird at the foot of the tree, and worked my way back to

Soon it was late in the evening, and the brilliant moon east black shadows beneath the trees in the field. All was silent and hushed. Suddenly there burst out of a tree near by a roaring, rushing body, which made off across the pasture with confused cries. It was a flock of guinea My companion, more used to their tactics than myself, dropped one of their number before they had got out of range. We approached the next clump of trees cautiously. I even dismounted and carefully examined every limb, the bright light from the moon rendering everything visible, so that we could see, we thought, every knot on the branches. Like a whirlwind from the ocean, there came out of that tree a flock of screaming, cackling fowl, a score or more, which appeared as though evoked by a conjurer's wand from space. That they were in reality veritable birds of flesh and blood, and not shadowy forms, was quickly proved by two hurried shots, which fully established a beloved gun in favor again, Shooting at ghosts is about as satisfactory as guinea-fowl shooting by moonlight, until you have learned that, to get the last one of a gang of a dozen, you most throw up at the foremost, or, to drop a single one, you must sight about three feet ahead of him. On the table, they proved toothsome and tender; and after one initiation the board was kept well supplied. They are rapid runners, restless and uneasy in feeding, and some fields would be deserted in the afternoon that in the morning contained several flocks. "Dey is so roam," said my sable friend-"Dey is so roam ; dey is bad to fine."

At 4 o'clock, in the darkness of a morning in August, I was awakened by a rap at my door, and knew perfectly well that said rap proceeded from the black deerslayer, William Jack, Hastily dressing and going into outer air, I saw, by the light of the stars, that William Jack awaited at the gate, and that he held in

William Jack awaited at the gate, and that he held in leash nam's most faithful friend, a hound, of the genus our and species mongrel. Seeing which animal, crouching in a posture that betokened fear of his noble master, so abject that his indrawn tall tickled his nose with its tip; so emaciated that his ribs seemed asking for air—so mangy that he was sealy withal. I inquired for what purpose he intended this heast. William Jack replied that it was to track the deer of the forest that he had secured this dog, to aid in the search for the fallow deer of the fields. William Jack then strode along, after hitching the leash to his girdle, and as W. J. was a tall man, a long-legged man, and the cur was a small cur, a short-legged cur, there was a difference in their gait for which the dog's powers of locomotion could not compensate. But W. J. did not so much as give the cannie attention, but strode on with mighty strides, which, the dog perceiving, did his utnost to prevent. He was not accustomed to trotting along behind a man, held by a restraining rope: he tiked to jog along leisurely, to make side darts at lizards and grashoppers, to scratch his mangy ribs once in a while, and search out the lair of an annoying flea. Consequently he sat down and hos led—or rather he tried to sit down and essayed to howl—but he could not seem to find a suitable place to sit, and the complaint he fain would utter was promptly choked by the cruel rope. But every dog has his day, and this one somehow drew his head from out the noose and galloped off with a derisive yelp. Seouring the filed he first attacked a herd of goats and then an old bull, and made noise enough in half an hour to frighten away all the deer in a two-mile circuit, which sufficiently explains why deer were not captured that morning. After having his fill of fun and revenge he came back and submitted to be tied; and the drubbing that W. J. gave him was as balm ton my spirit. It was about 9 o'clock, and I was riding a horse that had been sent to me, sitting carelessly

In the evening William Jack came to me, saying he wished to show me deer "fo' sure," as he knew where they fed every night. Mounting the horses we cantered down the lane balf way to the river landing, where we turned into a wood and hitched the beast. William had stereotyped notions about deer-hunting and was a good hunter when he had with him tho trained dogs belonging to the proprietors; but in still-hunting I was of the opinion that American ideas were in advance of his. Those dogs hunted in a peculiar manner; they had been trained to point the deer. Instead of plunging into the bush and skurrying through the thicket like mad, these dogs quietly walk along shead of the hunter, occasionally looking over their shoulder to see if he is following. When on a fresh deer trail the dog comes to a halt and winks at the hunter to be silent and cantious; then he steps shead carefully and finally stops before a thicket which is pretty sure to contain a deer. the evening William Jack came to me, saying he

sure to contain a deer.

Barbuda has been the cause of the loss of many

manner to be shell and candons, when he steps attack carefully and finally stops before a thicket-which is prestry sure to contain a deer.

Barbuda has been the cause of the loss of many vessels, and it is upon the reaf bordering this end of the island that most of them go ashore. In years past, these wreeks were the chief reliance of the people, and it is presumed they may be acquitted of any other than laudable desires for gain, if they taught their children to pray, like the wreckers of Bermuda, for a good far wreck: "God bless papa and mamma, and send us a good wreck in the morning."

Near "Two-foot Bay," with a living the with the Parson, is a large cave inhabited by bats, from which, as from another "bat cave" in Antigua, good stores of hat guano have been taken. More valuable than this, however, are the phosphatic cliffs near, which might possibly pay as well as the little rook, Redonda, at ween. Nevis and Montserrat, from which an American was the company owning it a mine of wealth. Near the cave was a barren tract covered with cacti; Turks-head cactus sprang up everywhere, and tail candelabra prickly-pear, and baif a dozen other species or intributed towards—making the trail through this tract a thorny path. But they were agiow with favored and mong them were deer trails in abundance, and man gheap, sepecially such as lare been nearly covered by shifting sands, may not other to the casual observer even a hint of attracted and broken shells, thrown together in apparent confusion, speak to us as voices from the dead; they are sometimes the only remains of an unknown toner. We dug into these shell-heaps and soon came to charge a secretae. I have not some the secretae of the past of the word of the power of the past of the

next day, the Sabbath, I listened with enjoyment to the earnest ulterance of the Parson as he exhorted his at-tentive flock to stricter observance of their duties. The little church (Anglican) is neatly furnished, and chancel

rearriest intervance of the Parson as he exhorted his abtentive flock to stricter observance of their duties. The little church (Anglican) is neatly furnished, and chancel and altar, brought over from England, of oak elegaulty carved. A congregation of three hundred attentive listeners reward the good man's labors, well-drilled in responses and in song.

"Flamingo Flash" is the name bestowed upon a part of the broad lagoon, on the banks of, which is built the "Castle," whose ruins are the resort of numberless bats. Large as doves were some of these bats that had their haunts here. By day they would remain concealed in the nooks and crannies of the ruined walls; towards sunset they would sally forth by one or two at a time, followed by a vast throng as night drew near, and from their tenements would issue such squeakings as from a host of bats, unsurpassed, I think, by those of the multi-tude evoked by the "Pied Piper" of Hamelin. One of them, which I shot as he swept above the ruins, measured twenty-four inches in extent of wing and was four and one-half inches in length; his wing was four inches in breadth. As I walked down to the shore in the cool of Monday morning, the Parson was actively engaged in superintending the distillation of some bay oil, fragrant heaps of the bay filling the air with sweet odor. The tree grows abundantly in the scrub, and is a profitable article when the large price of the oil is considered.

Inclosed by a rim of mangroves is a little island on which the frigate pelicans breed; as we approached it in our boat they arcse in a cloud and sailed up into a higher atmosphere; a few lingered a little lower and a little longer than was good for them, and soon were fluttering their wide-extended wings in dying struggles upon the water. They measured seven feet in stretch of wing, and were the same species that inhabit the southern coast of the United States, the Frigata agaila. Upon the island we found some young, nearly fiedged, and a few eggs. Brown pelicans (Palecanus fuseus) breed here

in the lone islands and extends northward to the Florida Keys, but is only an occasional visitant of the mountainous islands and extends northward to the Florida Keys, but is only an occasional visitant of the mountainous islands south of Antigua. It breeds here in Barbuda, and also in Antigua, and resides here throughout the year, with perhaps local migrations among the islands. It is about the size of the American passenger pigeon, though with shorter tail, and is fully as excellent when on the table. The season bad bardly commenced, but the pigeons were there in such numbers that we secured sixteen in the short space of one hour. Other birds feed on the sea-grapes, and they are as delicate and tempting in a pie, as graceful and innocent in the field. There are two species of doves, the larger, Zenueda martinicana, the smaller, Chamaepeleia passerina. I found them in every island of the group, but in none so abundant as here; the smaller species fairly swarming about the pools and mud-holes. At a shot, they would arise and settle in such numbers along a branch that a dezen could have been swept from it with one charge.

branch time a wavel scale of one charge.

At the end of a fortnight, every week-day of which was passed in some such manner as I have in this article described, I bade adieu to my hospitable hosts and crossed the channel to Δntigua, though I would gladly have accepted their invitation, off repeated, to prolong my stay.

MASSACHUSETTS FISH AND GAME ASSOCIATION,—Boston, April 3d.—The annual meeting of this association was held last evening at the headquarters 608 Washington street. The anual report of the Treasurer showed a hallance of \$360 47 on hand. The present membership is over 200. Sir Randall Roberts of England briefly addresed the meeting on the subject of fish hatching in Great Britain; The association voted to invite him to address them on the 28th inst. The following officers were elected: President, Walter M. Brackett; Vice-President, Hon,Thos, Talbot, Hon, Daniel Needham, Hon, Chas, Levi Woodbury, Col. Henry Smith, Agustus T. Perkins, Esq. J. Lewis Stackpole, Esq., William Emerson Baker Esq., Treasurer, L. M. Chase; Recording and Corresponding Secretary, Edward S. Toboy, Jr.; Libravian, E. M. Messinger; Executive Committee, W. S. Hills, John Fottler, Jr., C. W. Hersey, F. R. Shattuck, C. T. Jenkins.

WOODCOCK IN New JERSEY.—Editor Forest and Stream:—If "many of the sportsmen of that State are in doubt whether or not the law has jurisdiction over the deeds of a proprietor on his own estate" asstated in your Notes last week, it must be because they have very slight acquaintance with the law. The new law referring to woodcock is only an amendment of the general game law passed in 1874. That general game law had a section which exempted from its provisions and penalties proprietors killing or catching game upon their own property, but that section (30) was repealed in 1876, and the game laws of the State are of general application, like other statutes which define crimes and prescribe penalties. In specified seasons, to kill game is a misdemeanor, and during these seasons in "proprietor" has any more right to take the life of a game bird, fish or animal, on the plea that it is "on his own estate," than he would have to take the life of a horse or a mat that had strayed upon his premises. WOODCOCK IN NEW JERSEY .- Editor Forest and upon his premises.

labors. Until dark, we limited carefully for deer, but, though the Parson was an excellent hunter, we searched in vain and returned to the house bootless, save our birds and Carib relies; but I enjoyed it just as much the naturalist in me predominates over the hunter, and I delight in new birds and scenes more than in sport obtained by the shedding of blood; so we jogged along happy and content, the Parson in the consciousness of having given me pleasure, and I in the serenity of the hour.

To this day there comes back to me the calm atmosphere of that perfect evening, with the perfume of acacia blossoms, that time has not robbed of its strength. And

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to of sending reports for the FOREST AND STREAM Directory to Came and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value; State, Town, County; means of access; Hotel and other secommodations; Game and its Senson; Fish and its Sonson; Boats, Guides, etc.; Name of person to address.

FISH AND GAME RESORTS,-We again invite attention to the Game and Fish Directory, of which mention is made above; and we urge our friends to send us such information as they may possess for the general fund.

-A. fox was captured in Trinity Cemetery, New York City, a few weeks ago. They caught one in Greenwood in 1878.

-An engineer on the Mobile and Obio Railroad ran down a buck in the Mississippi pine woods a fortnight ago, breaking both of the animal's hind legs. Venison was served in the caboose that night.

GODBOUT WINTER SPORT,-A late letter from our correspondent on the Godbout, Canada, tells of the winter there -

there:—
There is little to be done here this winter. Trapping is very poor all along the Labrador Coast. The full hunt is one-third less than usual. Winter seal shooting, which used to be pretty remunerative, is a complete failure. Small game is, with the exception of ducks, scarce. Up to date I have not seen a single partridge (ruffer grouse). The ptarmigan, which used to be abundant on the north shore, has disappeared. We have not seen any for the last three years. To make up for this, ducks have been and are still unusually numerous. The kinds we have at present are the common eider, long-tailed duck, or old squaws, the Iceland golden-eye and the whitewinged gullemot. I have killed any amount of them since last November; in fact I supplied the five families of Indians here with as much as they could eat, which is a good deal; of course they taste a little fishy, but that makes no difference.

There is, however, one great drawback to winter duck shooting, and that is the intense cold. One must be a born gunner to enjoy it. I was out very often for five or six hours in my little cance among the drifting ice when the thermometer stood at 30 deg, below zero, and even under that sometimes. My best bag was thirty-four oiders and two golden-eye ducks in one morning's shooting (Dec. 30th).

MANITOBA'S ATRACTIONS.—Emerson, Manitoha Manal.

ing (Dec. 30th).

MANITOBA'S ATRACTIONS.—Emerson, Maniloba, March 25th.—It may be interesting to some of the readers of Forest and Stream to hear a little of the shooting to be obtained in this Province, or more especially that to be met with near this point, Ducks and prairie chickens are our principal game, but numbers of swans and geese may be killed within easy distance of Winnipeg. Almost every variety of duck is to be met with, but the mallards exceed others in point of number. There is good decay shooting in spring, say about middle of April, and in the fall no better light and canoeing sport can be obtained than that to be had either at Lake Manitoba, distant eighty miles from Winnipeg, or at the Marshes at the mouth of Red River, that is to say, where the river runs into Lake Winnipeg. Last fall the ducks and prairio chickens were very numerous, and a friend and myself had capital sport at Rat River, distant twenty-five or thirty miles from boundary line, and right on the route of the Penbina branch of the Canadian Pacific Railread. Any party coming through from the States in shooting-car can be landed right on the ground, so to speak; and I feel justified in saying, that they will in every way be delighted with the duck shooting. October will be the best time for them to come. At either Lake Winnipeg or Manitoba, Indians can be hired by the day, together with their canoes, at a cost of \$1 per day or thereabouts. Good camping grounds can be found, and, if desired, a steam tug can be chartered at Winnipeg which will carry the shooters to their happy hunting grounds. For prairie chickens I most strongly recommend the country round Hallock, Minnesots, some twenty miles south; but, as a general rule, they are met with it most localities. Last fall on several occasions I killed from eight to seventeen, within half an hour's walk of our railroad station. Manitoba's Attractions. - Emerson, Manitoba, March railroad station.

We are all strong believers in small shot, using nothwe are att strong believers in small sind, using notified larger than Tathanis No. 7 chilled all the year round. For any own part, 1 load with 44 or 5 drs. of Dupont's No. 1 ducking powder and 1 oz. of No. 7 shot, and 1 find that this charge, when properly directed from one of Greener's 10 lbs. chock-bores, does far better execution

Greener's 10 lbs. choke-bores, does far better execution than I have ever done when using larger shot.

In conclusion I may say, that if any of the readers of Forest and Stream think it worth their while to pay this Province a visit, I am one of the Custom officers at the boundary line (and as they come through they can't help but meet me). I shall only be too happy to furnish them with any information as regards shooting grounds, etc., that I can give, free gratis—for nothing. E. G. S.

ing.

NEW YORK—Rochester, April 3d.—Woodcock have been here for weeks past, but no snipe have yet put in an appearance. Some of our sportsmen have had good sport with the ducks on Cayuga Lake and the Seneca River; none worth speaking of have been bagged much neuter Diving Dirox.

NORTH CAROLINA—Raleigh, April 1st.—I give you result of some shooting by myself during the last winter with a 20-gauge, muzzle-loading, double-barrel shot gun, about thirty hours from New York, in a country where birds are plentiful and the shooting good. The prople do not post their lands nor object to your shooting, though farming lands can be bought cheap here. I shot ten days in Docember and bagged 58 hares, 315 quail and 1 snipe. During months of January and February 1s lot mineteen days, bagging 64 hares, 789 quail, and 2 snipe. Had I

been using a brocch-loader, as I generally do, my bags would have been, I think, at least a third more. would have been, I think, at least a third more. The woods used were very limit, at least a third more. The dogs are the interest of the state of th

address R. S. Kirkland, Raleigh, N. C. QUAL.
QUAINT OLD WINGHESTER.—Winchester, Va., March
10th.—Your good paper finds its way here and is read by
many that never take the field with dog and gun. Quaint
old Winchester has its past and present history. It has
Fort Lowden and the well, 150 feet deep, dug by Washington to supply the fort with water; its Braddock
street, through which General Braddock and his army
marched on their way to the famous Braddock's defeat,
and of the last war to's many relies remain to enumerate.
On the crest of yonder hill lie 10,000 soldiers that gave their
lives for the gayse—in two inclosuress of 5,000 ach. One On the crest of yonder fall he 10,000 soldiers that gave their lives for the cause—in two inclosures of 5,000 each. One is cared for and made beautiful by the Government; the other is watched over by kindred hearts that drop their tears and flowers believing they are honored dead. "Quaint old Winchester," said one of Virginia's oldest and most accomplished matrons to me the other day, "was, before the war, the very center of good society and culture." and culture

Sportsmen are not as numerous as before the war, from the fact that they have not the means nor the time to indulge. Shooting is good all over the State and in the Shenancoah Valley wild turkeys, quail, partridges and deer are found in fair quantities enough to make good sport. Sportsmen are born, not made; and the mere killing of game, to the true sportsman, is but a small part of the enjoyment of the field. The beautiful scenery of this valley will largely compensate for a moderately sized bag at night, and porhaps, after all, the sportsman will feel as much at peace with himself and all the rest of the world for having had a day out in such a delightful country, as he would have been in a fungle all day slaughtering.

The wild turkeys are plenty here, and I think most of those who have given their attention to this bird will agree with me, that they are the wildest and the tamest. Sportsmen are not as numerous as before the war

agree with me, that they are the wildest and the tamest, the most cunning and wary, and the most stupid and foolish of all birds. The first two or three times starting him, he will put himself into the air the moment he heave or sees you, if half a mile away. Shoot at him every time you see or hear him, and he will soon become demoralized and then find some tree-top, or place to hide, and if his head is out of sight, all right, he will permit the dog to point him, and be kicked out within fifteen or twenty steps of the hunter.

The past season has been very favorable for sportsmen, and that most respectable citizen, "the oldest inhabitant," says he never saw such a mild winter. To-day the air is soft and balmy; like a bridal vail upon the brow of a young maiden, the bluish purple haze hangs upon the mountain, inviting spring to come and woo and wed.

mountain, inviting spring to come and woo and wed. Catching the inspiration, the woods are resonant with the songs of birds trooping their way northward, and redolent with the perfume of swelling buds and flowers.

Indianola, March 21st .- We are having very wet spring, and game of all kinds is very scarce, although I have not seen as many fowl as there were this fall for many years. They all left after Christmas.

all for many years. They all left after Christmas.

OMAHA Sportsmen's Club—Spring Hunn,—Omaha, Nob., Murch 37th.—The members of the Omaha Sportsmens' Club had their annual spring hunt on Thursday. Owing to the scarcity of game it was not quite as successful as previous spring hunts. Those who wont out were divided into two parties, or sides—one being chosen by Capt. Hathway and the other by Capt. Henry Homan, and they hunted man gainst man. The President of the club, W. H. S. Ifughes, made the smallest score, killing a poor little lone bald-headed snipe, giving him a count of one. The Vice-President, George Mills, didn't do much better, as he only killed a bald-pated duck, giving him a count of two. The killing of a different kind of a bird from that which was secured by Hughes was a stroke of luck which made his count one better than that of Hughes. It is said by some of their friends that owing to their official position they didn't want to carry off the honors of the hunt, and therefore generously concluded to make the smallest possible score; others intimate, however, that they did their level best. J. W. Petty brought home a handsome string of ga ase, having made the largest count, 203; Gen. Crook, J. W. Petty and Honry Homan hunted on the Platte River, near Forest City; Zack Taylor, who hunted around Missouri Valley Junction, in lowa, didn't find much to shoot at, and gave up in despair at about 10 colock in the morning; Dr. Peabody was out in the vicinity of Horsenberg Lake, but hunted only half a day J. Windheim took in the Elkhorn; William Krug scouted along the Platte, near Fremont; Messrs. Hathaway, B. E. B. Kennedy, Preston and Sackett hunted around Missouri Valley; W. H. S. Hugees, M. W. Kennedy, George Mills, Z. T. Spring, Mr. Blake and Goodly was out in the vicinity of Horsenbea Lake, but hunted only half a day J. Windheim took in the Elkhorn; william Krug scouted along the Platte, near Fremont; Messrs. Hathaway, B. E. B. Kennedy, Preston and Sackett hunted and Missouri valley; W. H. S. Hugees, M

CAMP BEDS

BY AN OLD CAMPER.

BY AN OLD CAMPER.

"H. Z.," "an old camper," in your issue of March 4th, wants to know how to secure a comfortable camp bed? That depends. I have known fine-huired campers with expensive and elaborate outlifts, trains of wagons, horses and servants, who set in arm-claims to eat from tables that groaned under their loads of good things, and slept on spring mattresses with snowy sheets and lambs'-wool blankets, and yet they imagined they were not entirely comfortable. I have seen poor devils, ragged, dirty and foot-sore who were glad to improvise a bed that was luxury to them from an armful of cornstalks or two or three fence rails laid side by side in the nucl. Comfort depends upon spirit and circumstance. Luxury is entirely a relative quality. Beds of down and the nectar of the gods may not suffice for one, whilst another may revel in bliss with a cup of water and a crust of bread if a dirty blanket is added for his bed. I have passed a very comfortable night on a bleak mountain side between two fires that had to be replenished every half hour to keep from freezing, without coat or blanket and with the butt of my gun for a pillow, because the labors and the hardships of the day had prepared me for it. Discomfort diminishes the exactions for comfort.

of my gun for a pillow, because the labors and the hardships of the day had prepared me for it. Discomfort diminishes the exactions for comfort.

I once know a little frail preacher, whom fortune cast into the wilderness, where he got lost, His entire baggage was the framework of an India-rubber pillow, about the size of his ear, which he thought was necessary to his comfort wherever he was. After he had run himself down, and when the dusk of evening was closing in, he thought of his pillow, fished it out of his pocket, blew it up, and, placing it at the foot of a spruce tree, went to bed. After his wild race—"go as you please"—the new position was positive and absolute comfort. That was a camp-bed for you! But before he had closed his eyes a mountain lion appeared on the scene, and discomfort succeeded. The preacher broke down the mountain at such speed that the lion made no attempt to keep up. By and by he met a solitary traveler leading a mule, of whom he excitedly asked, "Where am 1? Which way am I going?"

am I going?"

But this is getting a long way from "H. Z."

whom he excitedly fascu, "Where an Al Thurs and yam I going?"
But this is getting a long way from "H. Z.'s" bed. The best bedding for camping use is blankets. If not enough, take more blankets.

It is a fact that if a man can be sufficiently comfortable during the night to sleep well he can stand almost any degree of hardship and hard labor during the day, and the day may be pretty long. But if his rest is spoiled by cold he is illy fitted for the day's work. If transportation facilities admit, a good, light, narrow hair mattress, with rubber or oil-cloth on the under side, is the best artificial formation for a bed. But if carrying capacity is limited, confine yourself to blankets. They will, for given space and weight, give more comfort than anything else. The foundation for a bed can almost always be improvised. Fir or spruce boughs, properly cut and placed, make the best bed for one night in the world. Straw, hay, grass, leaves, willows, or any other slender brush, palmetto leaves, moss, pine needles, all make good beds; only if the material is ccarse it should be placed evenly and parallel with the position of the sleeper. Tho only question then is sufficiency of blankets to equalize the inequalities. If there is liability of rain or snow, and your bed is in the open air, the top covering should be water proof. It is always best to get on the ground, unless in a very warm elimate, because the temperature is more equable. Cots, bedsteads, scaffolds, hammocks, etc., never give the solid comfort of mother earth. Night air changes are almost sure to bring chillness from beneath. A bed on frozen ground or on snow can be made much more comfortable with the same bedding than it possibly can be in a wrayon, cot, or anything else that is off the ground so that air circulates beneath it.

Bear Hunting in the Yellowstone Country.—Yellowstone River, Montana. Feb. 5th.—Since bear lumting has become popular, I will relate an adventure Mr. Hiram Stowart and I had in 1877 on a small stream that empties into the Yellowstone known as Fly Creek. We struck camp at the mouth of said stream to try our skill on wild geese, but after one day's hunt only killed four, and we concluded to go after buffalo. So early next morning we packed our camp on four jacks, mounted our ponies, and started up Fly Creek, which runs south-west of the Yellowstone and heads near the Big Horn Mountains. After two days' travel we came to a large band of buffalo, which versus a large band of buffalo, which we found of buffalo, which we found guietly grazing in a small valley. We

had wandered off north of our watering place, and after looking at the large herd of cows and calves, we concluded to go and look up a good camp, secure our pack animals, and come back and attack them in good style. After we had traveled several miles we saw in the distance a small clump of box-elder, which always denotes water. We soon landed and found to our entire satisfaction a splendid stream at the head of the ravine. As our long-cared packers showed signs of uneasiness, I took a circle around the ravine to look for fresh signs of Indians, as they are easily alarmed at the redman of the forest. Once around, I could see no cause for the fright. So I dismounted and went down close to the water to soe if there had been any zame there during the day. When I as they are easily alarmed at the redunal of the forest. Once around, I could see no cause for the fright. So I dismounted and went down close to the water to see if there had been any game there during the day. When I was within about three hundred yards of Balaam, I came to a bear track not over three hours made: but the size of that track would scarce any jack, to say nothing of the bear that made it. I let my pony go to camp and started on the trail, following it into a dense red-willow thicket, somewhat anxious to try my faithful Winchester on bruin. I crawled on, and, after about twenty yards, I was greeted with a noise between the roar of a fion and the growl of a tiger. As the chances were against my retreat with any speed, I soon got out on clear ground. I looked after him for some time, but could not find him. I called to my friend Stewart, who has had twenty-five years' experience in the mountains with all kinds of game. He came at once, but on the other side of the ravine, with his Sharps. A4 cal., forger, bowder, one leg two inches shorter than the other, large white hat, and a buckskin suit. "Well, what have you here?" "I don't know just what, and I don't care about going too far in those willows to find out; but from the looks of this track I would call it an elephant's, if they inhabited this country." There was a trail coming down the bank just opposite me, and I felt sure that it passed near his lair. S. came down this trail until I could see his large hat. I told him he had gone far enough I thought, as he must be very near the spot where I heard it he music; but we were both anxious to get first blood. He kept moving down until he was full half way down the bank, when all at once I heard the charge, followed by the deafening crash of his rifle, then a howl. I could now see S. scrambing toward a projecting rock, but the hear I could not see for the bushes; but I had not long to wait, for the bear was within twenty feet of him. Quick as thought I fired—struck him in the lungs. The report had s crossed the hollow by crawling under the bush, and found him seated by the bear with death stamped on his countenance; his face was like that of a corpse; under his cyes were a dark-yellow shade. After some conversation, I learned he tried for a second shot, but the shell failed to explode; and on drawing the shell the ball stuck in the grooves; so all he could do was to give legibal, which in that case would not have lasted long. On butchering the bear we found his ball had struck the brute in the breast, and went down about ten inches between the skin and flesh and lodged there, doing no harm at all, although the ball was mashed flat as a large copper. This bear weighed twelve hundred pounds. We took all the fat to camp and had one hundred and seventy-six pounds of rendered oil, which we sold for fifteen cents per pound for cooking purposes. My companion would not have the robe at all; he said I had saved his life, and I should keep it as a token of his respect toward me. When staked on the ground it would square nine feet. This was a grizzly; and in his charge at S. he tore up two willows, three inches in diameter.

Stewart died a few months after. I think this scare had some permanent effect on him.

W. A. Allen,

SHOOTING MATCHES.

IRELAND—Dublin—The marksmen of Dublin have takenup gallery practice and have formed the Dublin Miniature Rifle-Club, and at the annual general meeting, held Jan. 224, the following were elected as committee and officers for the season:—A. Traili, J. G. Pollock, J. K. Millner, A. W. Panton, Hugh Gabbett, R. Simson, J. Rigby; with E. E. Knox, Honorable Treasurer; W. R. Joynt, Honorable Secretary.

The club meet at the gallery, 24 Suffolk street, every Thursday from 31 to 9 r.M. until July 1st. During the club hours the members have the exclusive right to the use of the gallery; rides, targets and attendance are provided free, and amunition can be obtained by members at a reduced rate. During the season of 1870 prizes to the amount of £31 were offered for competition, IRELAND-Dublin.-The marksmen of Dublin have takenup

The Rifle.

THE "PALMA" CONDITIONS.

BOSTON, March 26th. Editor Forest and Stream:

Editor Forest and Stream:—

I am pleased with the friendly exchange of opinions among riflemen, that the discussion of what to do with "Palma" has brought out in your columns. I know that the Committee of the N. R. A., who have this matter in charge, will be thankful for any suggestions from us, that will help to remove any obstacle to the success of a match with Great Britain.

Sir Henry Halford has said "that a team will nover come over with the present conditions." Whether they will come if we change the conditions requires the seen. "Polyury is most the

with the present conditions." Whether they will come if we change the conditions remains to be seen. "Palma" is most dechange are commonly remains to be seen. Falling is most oc-oldedly a national trophy. We might just as well permit different States of America to enter the contest, as different States of Great Britain. We began wrong; let us acknowledge our error, and start right. We look to the N. R. A. to use every exertion to bring about a match. The conditions were modified, when it suited the gentlemen who controlled the affairs of the N. R. Δ . In the interest of the Δ sociation. Now let us have then modified in the interests of riflemen, and all future contests to be with

After we upon our part have done everything to make it pos-After we upon our part have done everything to make it possible for a match with Great Britain, removing all cause for a possible excuse, and they fail to appear, we shall know the reason why. I can bardly agree with Col. Clank and Capt. Terry. Much as I like individuality in rifle shooting, it would lower the dignity of a national contest to make it an individual one. Our team system is nearly perfect, and in great contests let us stick to it. Working in harness I know is very irisome to a good shot. Is it not worth the sacrifice, whom we know the great stake? I think that should four of the best individual shots in the country be selected, and given an assistant or coach of equal merit with themselves, their aggregate would be five per cent, better as a team than as individuals. But they must practice as a team to shoot than as individuals. But they must practice as a team to shoot their best. Last fall witnessed the want of team practice in the Massachusetts State Team—four men who stood first, second, fifth and ninth in the great individual tournament beaten out of sight when they came together as a team, because they had not practiced as a team. Let us refer back to the famous Spirit of the Fracticed as a cash. Let us refer that to the amounts first or Times Match. We find the great team men, who have just beaten Great Britain, way down in the list. Why? Because they have sunk their individuality in the team, and have had no practice to sunk their individuality again. That they were the best indi-recover their individuality again. That they were the best indi-vidual shots in America is evident, else they would not have won their places upon the team. Thus we see that team and individual shooting are different, and both right. I prefer for my own pleasure individual shooting.

The only improvement that I could suggest in our team-work

The only improvement that I could suggest in Our tealar-work would be to give their grand (total, and not the Individual scores, as it is not individual work, but the whole team. Four men may be nearly equal as individual shots, but in team-work one may be called upon to risk a shot oftener than the others, for the safety of the team, and his name is placed at the foot of the list, and the one who receives the benefit of this risk is extolled to and the one win centers the electric of the land, when he is no better than his brothers, and perhaps not as good. It would be, prob-ably, almost impossible to accomplish such a change. I think the men would work together better under such conditions. We have done splendidly in our team-work, and I think we need fear

no derest.

I wish to speak one word for the greatest benefit of the indi-vidual rifleman; that is, an annual tournament. The success of the hasty arrangements last fall, goes far to prove that the rifle-men will well sustain an annual meeting. Let the Directors of men will weil sustain an annual meeting. Let the Directors of the N. R. A. take this matter into serious consideration. The gate-money will not foot up like an international match, and the gentlemen will not have quite so good a time, but the great body of riftenen all over America will be benefitted, and the target capacity of Creedmoor will soon have to be increased. When the foreigners are here they can join with us, and when we are not to see them we can have a most interesting time among

The great mistake about the fatigue of the three days' contest The great mistage about the raigue of the three days contest could only be entertained by those so ignorant of rifle practice, that the least they said about the matter the more we would think they know. I deny that a man in practice is fatigued by a three or four days' match. Men who shot through the fall meeting of the week previous will bear me out in this denial.

We leave the matter in the hands of our Directors; may this secret means the confidence that we have in the present Beard.

season prove the confidence that we have in the present Board.
W. H. JACKSON.

RANGE AND GALLERY.

MASSACHUSETTS-Boston, April 3d.-There was a good attend-MASSAURESTIP-Decon, and a America was a good account ance of members of the Massachusetts Rifle Association at the regular meet to-day, at Walnut Hill range. The weather conditions were good, a light wind from south to southeast prevailing. There were eighty entries, and the following are twenty of the best scores made at 200 yards:-

| Boston, April 1st.—The Consolation Rifle | Match, | at the Ma | muoth |

Ritle Gallery, for March, is ended, with some of the most wonderful shooting ever done in the gallery. W. R. Harrison has made soventeen clean scores, twenty-eight shots each. This last week he made fourteen clean scores, twelve in one day; he made twenty-six consecutive bull's-eyes, which is the highest number ever six consecutive bull's-eyes, which is the highest number ever made in this gallery; the next highest is E. F. Richardson, with eighteen consecutive bull's-eyes. Mr. Harrison made three clean scores in succession, and two more bull's-eyes on his next score; which made up the twenty-six consecutive bull's eyes. Mr. Richardson made seven clean scores during the month; Mr. N. W. Arnold made two, and Mr. J. Merrill two, making in all twenty-eight clean scores. In the second class the competition has been lively. L. W. Furrur, of Abingdon, heads the list. The new rilde match for April has commenced, and the indications are that it will be any popular as its prodecessors. The following are the prize winners, with their scores in detail. 150 feet; rounds 8; possible 40; three scores to win:-----

NEW YORK SCHUETZEN CORPS. - The New York Schuetzen NEW YORK SCHICETZER ORBER.—THE NEW YORK SCHICETZER COPPS held a regular monthly meeting April 1st, Capt. George Acry in the Chair. It was decided to hold the regular summer's festival during the 7th, 8th and 9th of June at Union Hill, Schuctzen Park. Mr. T. C. Banks, of the FOREST AND STREAM, was then proposed, and by acclamation made an honorary nember of the Corps. Practice shooting will take place during April and May, the programmes for which will appear in a few days.

and smy, the programmes for which with oppear has the vays.

INDEPENDENT SCHUSTZEN,—The N. Y. Independent Schuetzen,
Capt. J. J. Diehl, also held a monthly meeting, the 3d inst., at
Walhalla Hall. H. H. Hancock was in the Chair, and Mr. Conrad
Geib acted secretary. This Corps abandoned the idea of going
to San Francisco this summer, but instead will start the 2th of
June with wives, children and music for Lake Hopatcong, N. J.,
and will remain there four days and shoot at a big bird, beside
having some other fun and entertainments, as fishing, bathing,
dancing, etc. The whole programme will soon be given out.

Archery.

ARCHERY FROM AN EASY-CHAIR.

WE are on the eve of the most exciting campaign that has been participated in by the American archer, and those to have the best interests of the cause at heart are trying to old mistakes that may mar the work of the coming year.

This, like all other campaign work, begins at home, in the prim-This, like an other campaign work, begins at home, in the primaries—in other words, in the cituls of the towns and cities. The best beginning we can make is to "let well enough alone," and not commence the work of changing and readjusting everything that comes in our way—at least until we are reasonably well acquainted with its workings and value in its present condition. We had better spend more time in trying to figure our arrows We had better spend more time in trying to figure our arrows into the gold of the present target, and less in trying to figure the poor shots that land in the black and white, up to a higher rela-tive position than they now occupy, or than they are entitled to by their extreme distance from the objective point of the target.

If the white becomes so important that its salary must be raised, If the white becomes so inpot that has salary must be raised, we shall next be waited upon by a delegration from surrounding space, with its "bill of rights" and grievances, with its millions of wounds to 'bill of rights" and grievances, with its millions of wounds to 'bill of rights' in any of us be awful size increased to be afful size in the sky looking bile. Or the sky looking bile.

Next after not doing this every club should evert itself for Nox after not doing this, every culp should exert itself for the aggregate more than for individual scores one over another; in promoting the first the second would occur as a matter of course. But an individual may keep his or her score up to a certain point, and at the same time exert such an influen

tain point, and at the same time exert such an inilicence on at least a portion of the other members, by timely hints and triendly belp, that the score of the whole will be greatly increased and the standing of the club improved.

One trouble, in country clubs at least, is that some persons can make better scores than others. There should be no chagrin over small scores—every one has been forced to make them in his or her early ipractice. Individuals will over have different degrees of advancement; do your best, think more, raise your score a little every week, help those less favored to come as near your level as may be, and remember that in a club every one countable numerals from 1 to 0, and without the I you can never make 609 count 1 000. 999 count 1 000.

Ford did not exhaust the possibilities of archery, yet he so Ford did not exhaust the possibilities of archery, yet he so nearly annihilated the probabilities of equaling his explots, that to this day his name stands without a rival. Yet the Thompsons can enjoy their favorite pastime, with Ford's luminous score shining upon them from afar, and the Grays and Carvers and many others can make just as large a score as though the Thomp-sons could not surpass them; and so, in turn, the lesser lights may shine all the brighter for the reflected light of the larger

Happily there are many of us, although making but smail scores, that can enjoy the glorious pastime, improve our physica condition—making life's cares lighter and longevity more prob-uble—glad that others can do better so long as it does not add to our shortcomings, but shows us the possibility of something

If the National Association of archers would remove the bars If the National Association of archers would remove the bars from archers whose clubs do not join the National, at fair rates of entry, it seems to muny it would be better for all parties. Where clubs have one or two members that bave the means or skill that would warrant their attendance at the National meetings, they refuse to join, thus barring all. The private practice club seems to be on a more impartial basis, with one exception, than anything yet brought forward, and I expect to hear a good account of the future. We want to see the secores—not of individuals alone who are phenomenal shots, but of ordinary every-day archers, who can miss the target clean and are not too thinskinned to own it. Let us know how the least expert get on—what can the whole club secore? We want something of this kind-down within reach—lo lean against while tyewing the occasion. -down within reach-to lean against while viewing the occu —down within reach—to lean against while viewing the occasionally miraculous scores that take one's breath away—they are so unlooked for—and so unrelieved by any score from the balance of the club where they occur; they are like huge comets, shorn of their tails, blazing through the archer's firmament searching in

value for their loss appendages.

Let us have Jonahs, by all means—immonse, colossal Jonahs—but let us also have an occasional glimpse of the whates, that we may judge of their capacity.

SHOOTING EXTRAORDINARY.-Mr. Arthur Hope was pres SHOOTING EXTRAORDINARY.—Mr. Arthur Hope was present at the North Side Archery Range Wednesday evening and agreed to shoot at thirty yards, allowing his score to be marked in advance for each thirty arrows, and subjecting himself to a forfeit if he failed to make the exact score. Three times his score was marked for 900, and each time he made exactly thirty hits—900 score. Then for a fourth round of thirty arrows his score was put down for 320, which it was thought would be a stumper. With this dillicult amount to make he shot with great care, and with each of twentre-sore arrows but twentre-sore hirs—230. with tims difficult amount to hake he shot with great care, and at the end of 'twenty-seven arrows had twenty-seven hits-233 value. With his next three arrows he needed to make but seventeen to complete the 230. The first arrow was a gold, the next a rod, and then he shot low, intending his arrow should drop in the white; but there was the slightest miscalculation, his arrow outting both the white and black, scoring therefore as a black, which

ting both the white and black, scoring therefore as a black, which made his total score 252.

On another occasion we have seen Mr. Hope set out to make a score of 120 at blirty sards, to be made of blues and blacks only, and to come within two points by making sixteen blues and fourteen blacks, all the hits being within a space smaller than the red of a four-foot target. How difficult this is to accomplish those only can tell who attempts, Mr. Hope is an enthusiast on the subject of archery, having devoted much time to its the ry and practice the past year, and has given our archers here many valuable hints in regard to the manner of shooting and care of weapons. He belongs to no club, but prefers shooting with his friends uable mats in regard to the manner of shooting and care of weap-ons. He belongs to no club, but prefers shooting with his friends ons. Ho deoings to do citil, but prefers shooting with an indus-in his private range for his own anausement and exercise. Mr. Maurice Thompson's delightful work on the "Witchery of Arch-ery" and Will H. Thompson's charming letters in your paper on hunting with the long how, have so captivated him that he is hav-ing alot of hunting arrows made for his use in the woods the

coming season. We shall hope that your readers will be favored before the year is over with many interesting sketches of life in the woods, not only from Hope, but also from many other archers who will learn to love this rare sport. Who can tell us what "T. A. L." signifies?—ED.

est and Stream: According to promise, I give you herewith, a copy of the resolutions relating to membership in our club, and making up of teams for matches, which were unanimously

mining up of contains for march 3 st. They read as follows:—
thereas, We believe that it is essential to the future welfare
prosperity of this club that it shall be composed of persons
up no allegiance to, and having no affination with, other archculus, therefore

owing no allegiance to, and maxing no animono area, once are yellos, therefore are distributed. That no proposals for admission to membership in this olds from members of other archery clubs be received. Resolved, That members of other archery clubs whose names are now upon the roll (if any), shall bereafter, and so long as they shall roughly members of said other dubs, be ineligible for places upon teams selected to represent this club.

Again, we have amended our constitution so as to read: Applications for membership * * * * * and identification with * * and identification with "Approximation for memorisms and identification with monother archery club, except the Private Practice Club, being necessary qualifications for admission."

Thus your readers may see exactly what the New York Archery

Club has done; and while I do not propose to enter into any dis-cussion here at this time, it seems to us all that we have taken a course that other clubs will be compelled to follow, and which has the support of those that have experienced the trouble we foresaw we would have. Besides, with your extensive experience, we are pleased to remember that you have always advocated ence, we are picased to remember may you may early shavocated such measures. Should a club be young and wealt, they might omit such decided measures; but when a club is as extensive and strong as the New York, needing no support, only that of its own members, it becomes a necessary step in order to preserve the interest of its members. No good can over come from those who have heart with their original club, and only attach who have heart with their original cuto, and only attent themselves to another for the benefits it offers over and above the other for that time being. At our last meeting the club elected James E. Morrison, Esq. an honorary member. The Park Commissioners have given their permission to the

club to use the Sixth-fifth street Lawn in the Central Park, and we shall probably commence to shoot outdoors about May Ist.

JAS. W. AUTEN, JR., Secretary.

THE ONTARIO CRICKET ASSOCIATION,

The most important event that has occurred for many years in The most important event that has occurred for many years in the Canadian cricket world was the holding of a convention on March 27th at Torouto to regularly organize what, in the fature, will be known as the Ontario Cricket Association. In compliance will be known as the Ordano Craw Resolvation Toronto, Handi-ton, Whitty, Port Hope, Ottan Persent from Toronto, Handi-sound, Singston, Brantford, Park, Asylum Club (Poronto), Carl-ton Club (Toronto), St. Catharjes, Cobourg and Barron The Inneading, which was very largely attended, was held larned The parlors of the Rossin House, and besides the club delegates there

pariors of the nosan Hones, and bessets to two teleparts and were present reliebeters from different parts of Ontario.

Mr. H. Totten, of the Toronto Club, was called to the chair, and
Mr. W. Lowrey, of the Carlton Club, to act as Secretary. On motion of Dr.E.W.Spragge of the Toronto Club, seconded by Mr.Chas. of Whitby, it was resolved that the meeting organize itself an association, to be called the "Ontario Cricket Associa-"Mr. Merrit, of St. Catharines, spoke briefly, explaining to c present that the object of the proposed association would be to bring the different clubs into closer and more intimate and friendly relations with each other, and the advancement of the interests of the game throughout the Province. Communications were read from Clinton and St. Catharines and from the well-known cricketer the Rev. T. D. Phillipps, of Ottawa, heartily in-

known encaster the test, 11.52. Inthips, of Ottawa, nearthy indersing the objects of the meeting.

It was decided that the officers of the association should consist of a President, two Vice-Presidents, an Honorary Secretary-Treasurer and an Executive Committee of fifteen, the officers of the association to be ct-office members of the third committee, and that five members of the committee, with the Secretary, constitute a quorum. On motion of Dr. Spragge, of Toronto, seconded the state of the second Mr. Simonds, of Hamilton, it was resolved to invite His Ex-llency the Governor-General to become President of the association

The following officers were then elected:

Vice-Presidents-Mr. Thomas W. Swinyard and Mr. F. W. Cum-

Secretary-Tressurer-Mr. W. H. Merritt, of St. Catharines.

It was decided that the Executive Committee for the current car be made of delegates from the cities and towns of Ontario, follows:-Two from Toronto, two from Hamilton, two from as follows:—Iwo Hold Follows, wo John Admirols, we John Oltawa, one from Port Hope, one from Robourg, one from Whitby, one from St. Catharines, one from Paris and Gall, one from Peterboro' and Lindsay, one from Chathau and two from Owen Sound, Meaford, Collingwood, Barrie, Orilla, Novmarket Owen Sundy, metarts, Grinse gentlemen were appointed a committee to draft a constitution and by-laws, to be submitted to the various citus throughout the Province for approval: Mr. Kennedy, of Hamilton; Mr. Kirchhoffer, of Fort Hope; Messrs, Tot-

ten and Spragge, of Toronto, and Dr. Lett, of the Asylum Club-

The following remarks appear in the New York Herald of April d, and 'as they represent our views, we republish them at this

'At last the much-needed and long-wished-for Canadian Crickcters' Association is a certainty, and in the future the annual international match between the United States and Canada elso cas will, in all probability, fully represent the strength of each country, which up to this time has not been the case. While this excellent result has been brought through the agency of such old and well known Canadian cricketers as Alderman R. Kennedy, of Hamilton; Dr. E. W. Spragge and Mr. H. Totten, of Toronto, and the Rev. T. D. Philipps, of Ottawa, yet the credit of suggesting and showing the necessity for such an organization and persist. and showing the necessity for such an organization and persis-culty keeping the matter before the cricketing public of Canada is due to the Forest and Stream, of this city. Heretofore the Cuited States-Canada match has been played at uncertain peri-ods, although the system of playing the matches alternately in each country has been adhered to. The selection of the teams on either side has never been representative, until the formation two years ago at Philadelphia of the Cricketers' Association of the United States, since which time the American eleven has been chosen from the clubs of the association, and has proven to be as representative a one as possible. After the so-called interna-tional match played at Ottawa last August, the advantages to be derived from baving a regularly systematized organization like the American association were apparent to all those who had the love of the Canadian game at heart, as without one it was simply impracticable to place an eleven in the field that could ever expect to hold its own. Canada of late years has not done herself justhee in the cricket field, but now, by careful management and wise selection, she will be able to bring to the fore the men she has so long hed in reserve. Her players should be chosen without rear or favor, and, under good captaincy, this year's match will probably be a very close one.

"Although the new association cannot be said to strictly repra "Attnogn the new Association cannot obtain to strictly represent all Canada, yet it justify covers all the important and principal cricketing centers of the Dominion, only leaving out Mon-real and Hulifax, N. S. The former city was not represented in last year's match and the latter place is too distant to be counted tyear's intended and the factor place is to distant to be controlled on. Cricketfor several years has not been played at Quebec at many of the old cricketing towns in the same Province, is year's United States-Canada match will be played in this city or Philadelphia.

Notes.-Cricket in California.-The Western Addition Laurente Cricket Clubs have Joined under the name of the Merion ricket Club. The following officers were elected for the ensuing year: President, C. L. Mathieu; Vice-President, A.M. Cox; Captain, A. Theobald; Secretary and Treasurer, C. B. Hill; Librarian, J. Ruggles, and Sargeant-at-Arms, L. Burnett.

THE COLUMBUS (OHIO) CRICKET CLUB held an informal meeting on March 27th, and it is thought that there will be considerable interest taken throughout the Buckeye State this senson.

THE PENINSULAR CRICKET CLUB, of Detroit, held its annual meeting on the 5th inst. Full particulars in our next issue.

The Germantown Chicker Club, of Philadelphia, on March 25th held a special meeting at Wilson Hall, Germantown, which was largely attended. The Constitution of the club was re-vised, twenty-one now members elected, and a Committee Report read, stating that through Richard Data a first-cliss Nottingham professional has been engaged for the season. The following is the list of officers for the season. President, Mr. Thos. Mc. Kean; Vice-President, Mr. Sam'l Welsh, Jr.; Secretary, Mr. F. M. Bissell, 243 South Fourth street, Philadelphia; Treasurer, Mr. Alex. W. Wister; Directors, Messrs. Ellicott Fisher, Alfred Cope R. Nelson Caldwell, Francis E. Brewster, and T. W. Kimber.

WHITRY CRICKET CLUB .- At the annual meeting of the above Glub at Kly's Hotel, Whithy, Ont., recently, the following gentl-men were elected officers for the ensuing year: President, Judg Dartnell; Vice-President, Mr. J. E. Farewell; Scoretary and Trea prer. Mr. F. W. Trousdell; Executive Committee, Messrs. S. Ray J. B. Laing, C. Neurse, C. Sarney, and H. J. Campbell.

JUNIOR ST. CATHARINES .- The Junior Cricket Club of St. Catharines met last week and elected the following officers: Captain G. Speight; Secretary, E. Miller; Committee, R. McDonald, A Masquir, E. Miller.

THE MERITON CRICKET CLUB, of Ardmore, Pa., at a meeting held March 3/th, unanimously agreed to purchase from two to four acres more of ground to add to the presont ground of five acres. Thirteen new members were elected. It is, proposed also to add large additions to the present club house, and the new rounds are intended not only to increase the size of the cricke bund, but to give ample room for lawn tennis. The Merior this techtically "booming."

GEORGE WRIGHT writes us, that cricket promises to be lively in Boston and vicinity this season, and the chances are that he will give up base-ball, attend to his new store, and take up cricket

THE TRENTON CRICKET CLUB, of New Jersey, will organize for the season this week. It intends playing a series of games with the Orange, Newark, Paterson, Camden and other clubs in the State during the summer.

THE HAMILTON CRICKET CLUB held its annual meeting on the 5th inst. The prospects for a good season were never better, and already a considerable amount of speculation is going on regardresults of the next games with the Young America and Staten Island Clubs.

The report that the Hargreave brothers have joined the Girard Club is unfounded, as new business arrangements w for the present, prevent them sparing enough time to play

THE GAMEIN AUSTRALIA.—At the cricket match on the Sydney Cricket Association's ground, on Feb. 21st, Alberts vs. Newtons, Alberts scored 311 first lunlings, with a loss of eight wickets. A. Gregory made 131, A. Docker 72, and Massic 55.

THE MANHATTAN CRICKET CLUB has been trying to arrange fixtures with all its antagonists of last year. Out of a long list, the Merion and Belmont are the only two that have replied.

THE OTTAWA CRICKET CLUB will hold its annual election for officers on the 12th inst.

SEAFORTH CRICKET CLUB.-A meeting was held on March 15th SEATORTH CRICKET CLUB.—A meeting was held on March 15th for the purpose of re-organizing the Grescent Cricket Club of Seaforth, when the following officers were elected, for the ensuing year: Patrons, Mr. M. P. Hayes and Mr. A. H. Ireland; President, Dr. Coleman; Vice-Presidents, Mr. R. J. Gerdlestone and Mr. F. Holmsted Captain, Mr. J. S. Roborts; Secretary, Mr. J. L. Harcourt; Treasurer, Mr. A. Wilson; Committee: Messra, H. Cameron, G. Baird, R. J. Gerdlestone, J. L. Harcourt, T. E. Joslin, J. Watson nd A. W. Bleasdell.

-Horan was the wickets about ten hours for his 230 mc out.

-Horan was t the wickets about ten hours for his 250 not out.

-Committees would do well to consult Richard Daft's notice in another column

-The Portsmouth Cricket Club, of New Hampshire, will be pleased to hear from all clubs in this vicinity that intend visiting Now England during the coming season. The P. C. C. is a young organization and should have the encouragement of the older clubs. The secretary is Mr. Samuel Emery, P. O. Box 1,271, Portsmonth, N. H.

-If the letter signed "Cricket," in your issue of the 4th inst., is supposed to be an answer to my letter of Feb. 9th, I should think supposed to be an answer to my letter of Feb. With I should think your intelligent readers will consider it a miserable failure as well as a misconstruction. "Cricket" seems to have gone of "half-cocked" like a rusty gun, the shot hitting ione of the "game" in my letter whatever, If "Cricket" can read plain English, he will see it was the FORENT AND STREAM that tremmrked: English, ho will see it was the FOREST AND STREAM that remarked: "This reform was much needed to protect one or two kindred organizations in this city," and not my humble self. Presuming a "Revolver." (Colt's barred, of course), is one who belongs to different clubs, I should judge at least three-fourths of all the cricketers in existence, are "Bevolvers." The Staten Island Cricket Club has its share, in fact, I think it was started by two or three "Revolvers," Messrs. Moore, Stevens, etc., although I think the latter is only an ex-revolver; then there are Messrs. G. Moore, Bance, Filmer, Jones, J. and McEyro Sprague, Marsh, Haughton, Woolston and I dare say many others, all revolving Hauguion, Woodson that I area say many oners, air recording "lights" of more or less brilliancy, but according to "Cricket," they are each and every one calculated to dim the luster of the Staten Island Club, and therefore it is opposed to revolving. What bosh! Judging from the above I should imagine the Staten Island Clubwas very muchin favor of revolving—o is any loverof the game, I have no doubt overy cricketer in the Marylchone Club the game. I have no doubt overy cricks for the saxy senous crisic (the fluest cricket organization in the world), is what we Ameri-cans call revolvers, and it is my private opinion the more revolvers the better, and more matches the result. Look at Philadelphia with all her cricket; how many first elevens have ventured as far as New York in the last three years? And what is a more serious question, how many have gone from New York during the same period? Echo answers: "How?" I think a "Revolving" club would be a very valuable addition to the cricketing fraternity of the United States; they could then

revolve all summer and shake up the anti-revolvers, and what would be the result, think you, beautiful or otherwise to "Cricket?"

A MEMBER OF MANY CLUBS.

Woman's Column.

PAPERS ON BOTANY .- We are pleased to announce that we shall shortly begin the publication, in the Woman's Column, of a series of papers on field botany, which we are assured will be found entertaining and practically useful by our lady readers.

useful by our lady readers.

LADIES AT THE SCORE.—Jamestown, N. Y., March 27th.—Yesterday afternoon a number of ladies and gentlemen assembled at Burns' Gallery for rifle practice. One of the gentlemen, Mr. S. N. Ayres, presented as a prize to be shot for by the ladies, a pair of gold bracelets. The terms were fifteen shots each, at Creedmoor target reduced to gallery distance, position off-hand; possible score 75. Five ladies took part in the contest, whose scores were as follows:—

PUBLISHERS' DEPARTMENT.

-The smoke-target ball, we understand, has gone into new hands, and a company has been formed ar Titusville, Pa., for their manufacture and sale. The advantages claimed for this ball are cheapness, the absence of debris and the impossibility of lisputes about the score.

The conical-base shell, an advertisement of which will be found elsewhere, has been tested by a great many sportsmen during the past year, and has, so far as we learn, met with their approval. The steel-headed shells are safe, and much cheaper than the ordinary make.

-The Collender billiard tables are generally asknowledged to be the most perfect manufactured. The number of tables made specially for private use is largely increasing.

Advance sheets of H. P. Hubbard's "Newspaper Directory of the World," published by him at New Harvan, Conn., show that there are 0.131 A merican (United States and Cunada) news-papers. The total circulation of a single issue of each of these papers, reaches the enormous aggregate of 29.67,335 copies. This is an average of 2.941 to each paper for a single issue, and taking all issues of the whole for one year a grand total of 1,836,473,592 all issues of the whole for one year a grand total or 1,859,475,592 copies. Taking ordinary forty-pound newspaper at its average measure of 4,000 sheets (solid) to the foot, one issue of all these plied up would measure 5,107 dect (mearly a mile) in height, or for a whole year 459,119 feet (over 87 miles) high. Placed end to cad, one issue would extend 13,300 miles; for one year 1,185,374 miles, or over forty-seven times around the earth, and five times the or over forty-seven times around the earth, and live times the distance from the earth to the moon. In a thoustand cmis of type there are nearly 2,000 different pieces, and in an average fourpage eight-column paper, set in solid brevier type, there are 148,000 cms (about 459 pounds), or 296,000 types in one newspaper. To print one issue of 1be total 10,131 papers of this average size, there must be handled nearly five million pounds of type, or 2,983.75,000 types. The total number of editions of all these dailies, weekles and monthlies for one year would make 724.708, and to print them occasions the handling of 2,173,499,899,696,600

A \$1,000 GUARANTEE.—Warner's Safe Kidney and Liver Cure will positively cure Bright's Disease and Diabetes; and it is guaranteed that it will also cure 99 per cent, of other kidney diseases, 55 per cent, of all liver diseases, and will help in every case without injury to the system, when taken according to directions, and the sum of \$1,000 will be paid to any person who can prove that it has failed to do this,—H, H, Warner & Co.—[Adv.]

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the Oll LOF GREGOSTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eniment Professor of Chemistry and the truth of the complex benefits of minding cigarettes made of 1 UKR MAT FOR MIL, been inclined one of the deadliest poisons known.

GOODWIN & CO., Manufacturers 207 and 209 Waterst.

WAY back among the "50's," on a bright Novem-A ber afternoon, I was sitting on the porch of the palatial residence that stood back some two hundred yards from the east bank of the Mississippi River, opposite the then large and fertile Island No. 10, cleaning my new double-barrel gun, after a previous day's duck shooting on the lake, when my attention was called to a sharr "Hallo!" at the front gate. I went through the hall opened the front door, and found the rotund figure and smiling face of old Major Lewis sitting on his horse. who saluted me with "Hallo! Alex., where is Wyatt? I answered, "Down at Nolan's." He remarked, "All right, I am on my way there and will see him. I am no-tifying the boys of our deer hunt to-morrow. Ed. Nevel's is the place, and seven, sharp, the hour. See that you are not behind time." With that he cantered away, immediately went about my preparations; cleaned the old man's gun, filled our flasks with powder, put fresh caps and a dozen buck cartridges into each of our shooting coats, and then settled down to steady my nerves for my first experience on the morrow at a first-class deer stand. The following morning was bright, calm and frosty

Old Aunt Cheney had us up to an early breakfast, and six o'clock found us in the saddle, our horses in a lively canter down the Bend toward Nevel's plantation. had scarcely made a mile, when the distant notes of a horn came vibrating through the woods from the direction of a neighboring plantation. "There," said the old man, "that is Ed's Horn." The last notes had scarcely died away, when the sound was taken up in a louder and longer blast away down to our right. "That is the Major's," I remarked; and our horses pricked their ears and voluntarily increased their speed. They had made but a few leaps, when a new and clear blast came quivering down on our left. "Who can that be?" queried my companion. "That is Dick Donaldson's new horn," I re marked. By this time we came in sight of Mr. Hind's plantation, and found Uncle Sandy H. at the gate equipped and ready for the chase. We had just formed three abreast and given our horses the bridle, when we were greeted by the faint echoes of a horn coming trembling on the

frosty air from away down in the lower end of the Bend." There, by-gad," said Uncle Sandy, "that is Billy Isler's

"There, by-gad," said Uncle Sandy, "that is Billy Isler's born."

We were soon at the rendezvous, and found the company riding up in pairs, until ten of us were gathered to getlier. N, was leading his horse through the gate, having his well-worn 10-gange thrown across his shoulder. A blast or two of his horn brought the snarling pack to attention. He mounted, turned down the long lane, followed by the cavalcade two deep, then through the woods and the canebrake toward Reelfoot Lake.

After a brisk ride, and many a sharp cut with the whips at the eager dogs to keep them in check, a halt was called, and by mutual consent N, was chosen leader. That veteran huntsman surveyed his followers, mapped out his ground, and said, "I will go with the dogs my-self, Major, you take the lower stand on the lake shore." Then, turning to me, "Alex, you want to kill something; I will give you the Big Sycamore stand, so come with me. You, gentlemen, remain here until I come back." I followed him some distance through the canebrake until we emerged into an opening some forty feet across, a well-beaten path running across its center, and a large sycamore tree standing on the left side. "Here is your stand (pointing at the tree), keep your eyes and cars

back." I followed him some distance through the canebrake until we emerged into an opening some forty feet across, a well-beaten path running across its center, and a large sycamore tree standing on the left side. "Here is your stand (pointing at the tree) keep your eyes and ears open; have your gun in hand ready; and, when the game runs along the path, aim a little ahead and fire. He turned and left me, adding, Keep cool; don't get excited."

Two long weary hours passed as I stood by that tree, gun in hand, my eyes fixed on the opening in the brake, and my nerves strung to their very highest tension; no deer appeared. Shall I overforget that trying time? How much I have learned since then! Listening attentively my ears began to drink in the sweet nusic of the hounds in full cry miles up the lake shore—faint, very faint at first, but growing louder by degrees. On they came, awakening the echoes on the further side of the lake. Oh, how it turilled my nerves, sending the warm blood coursing through my veins on a double-quick! Even now while I write I live the exciting moments over again. One boom was followed soon after by a second and a third; then two more in quick succession told plainly that more than one gallant buck had run his last race. On the dogs came, apparently right toward my stand. You ask me how I felt; well, it is useless to deny it, I trembled like an aspen leaf, and I don't think I could have hit a barn-door, to say nothing of a deer. Bang went the Major's gun, some two hundred yards to my right, and with it the course of the hounds was turned back up the lake shore. This gave me a little time to regain my composure, and at the same time threw me off my guard. I stood my gun up against the tree, took one step from behind the cover, folded my arms across my breast, attentively listening to the receding chase, when in an instant, without a moment's warning, out trotted a huge black bear right in front of me, and not more than ten paces distant. Discovering me it stopped, raised itself slowly on it

THE DOGS' HOME, OF LONDON, ENG.—The nineteenth annual meeting of this institution was held on March 27th at 105 Jermyn street, Col. Burdett in the chair. The report showed that during the past year the Battersen institution had found homes for 5,280 dogs, being 598 more than in the previous year. Twenty-four new compartments had recently been made, other erections had been completed at the cost of about £800.

COSTLY PERCH.

THIS perch inhabited the waters of Lake Richmond.
Lake Richmond is situated in the town of Richmond, Berkshire County, Mass., about twenty-two miles cast from Chatham and three miles west from Pittsfield, on the Boston and Albany Railroad. To this point the grade is up, hence it is called by the railroaders. "The Sammit." The lake covers an area of about one hundred acres, and was once quite famous for pickerel fishing, and a favorite resort for fishermen.

ite resort for ishermen.

Five winters ago a party of Chatham boys, ten in all, resolved upon an excursion to this lake. The time was to be fixed by Ken, who is esteemed, by common consent, as the "boss" fisherman in the place. No party is complete without Ken for a leader. He is a thorough believer in the "signs." Ken is as familiar with the zodine as the schoolboy is with his alphabet. Among his fishing paraphernalia is always to be found a "Farmers" Almanac," which must be consulted. To the impatient ten the time seemed long, the sign was so slow petiting round to the old man's neck. Finally Ken pronounced the sign right, and the boys must be off the next day. All was nade ready by night. Wodinesday morning dawned with every promise of a perfect day. The air was keen and motionless, and the sun, as is rose above the crest of the hills that skirt our village on the rast, seemed to smile approvingly upon the enterprise. Before 8 o'clock we were all on board the train, and off for Richmond. We found the conductor very obliging—our number being so respectable, I suppose. So he waived the ceremony of taking us to the station, a mile beyond, and dropped us out at the nearest point to the lake. A party from Pittsfield had arrived there before us. Among them was Dr. — As we filed out of the bushes upon the ice, one after another, ten in all, tho Doctor looked amazed, and as the tenth man emerged from the bushes the Doctor exclaimed, "Good Lord! are thero any more of you in there?" When we assured him that there were no more, he seemed relieved, though I noticed a deep shadow seemed to rest on that man's hopes, until the winds were unbottled and swept. "The Summit" like a burricane, which dispersed the Doctor's hopes alto-gether, and even the Doctor himself, for soon he and his party vanished out of sight for that day.

The plucky Chatham boys determined to weather the storm, menution hoping that its fury might abate, and bring some luck. Ken watched the signs and published weather reports. When there was a little fu

have a sign that never fails: If a tisherman leaves the cars on the depot side, good luck; if on the other side, bad luck. And with us the question is not "Did you eatch anything?" but "On which side of the train did you get off?" The next day we balanced accounts with the following result: anything?" off?" The r ing result :-

The only trouble with the astrological genius of "Hix's" story is that he is by several conturies out of his place in history. He should have lived and fished in the days of the Roman Empire, the times of augurs and auspices, when the citizens of the City of the Seven Hills feared to appear in public, to cat their dinners, or even to bathe, without having first carefully consulted the almanac to ascertain the position of the planet Mercury, or how far the moon was from the Crab.

Matural History.

LETTERS ON THE SPARROWS.

SMITHSONIAN INSTITUITON, WASHINGTON, D. C., March 29th.

Editor Forest and Stream :-

At an early period in the sparrow controversy I ven tured to play the dangerous part of prophet to the extent of predicting that the time would soon come when it would be found advisable to offer a reward for killing the obnoxious birds.

The following paragraph appeared in the Washington Evening Star of March 24th. I do not know the author, nor the circumstances of the case, and therefore cannot be suspected of having anything to do with fulfilling my own prediction :-

own prediction:—
"War on the Sparrows."—English sparrows are becoming a great nuisance, and citizens are complaining of them greatly. They drive all the singing birds away that feed upon the fruit-destroying worms and insects, and feed themselves upon the very fruit buds that the other birds protect. While the ground was covered with snow a short time ago one gentlemen living in the First Ward had five choice pear trees stripped of their buds by these birds. The boys will be delighted to know that the Alexachria (Va.) Game Protective Association, with a view to taiming out the breed, has offered a reward of \$1.50 per lundred for the heads of the birds complained of.—Gazette. Gazette.

Allow me to add that every position I have taken and maintained during this controversy has been fully established. With regards, yours truly, ELLIOTT COUES.

Which can we best dispense with, our delicious fruits or the English sparrows? It must be one or the other. Owners of fruit trees in this locality are beginning to have their eyes opened by the depredations of Passer domesticus, and there's "blood on the face of the moon" that forbodes ill for the prolific imported nuisance. The action of the Alexandria Game Protective Association, which has offered a reward of \$1.50 per hundred for the heads of the birds, is the first step in the right direction that has come to my notice, and no doubt will be good news for a majority of your readers.

If the horticultural and agricultural societies-whose interests appear to me to be more directly affected than the sportsman's-throughout the States infested by the sparrow can be induced to put a premium on the heads of the birds, as the Alexandria Game Protective Association has done, great good will be accomplished in a short time. Of course, in localities where the bird is protected by law, hostilities cannot commence till the law is changed.

I have another, though similar, plan to suggest, which I think will work admirably. It is that in towns or counties several prizes be offered to the boys. prize to boy bringing in the greatest number of heads in a stated period; second prize to next largest number, etc. Nearly every boy is familiar with devices for capturing small birds, and they would enter the contest spiritedly.

Now that the ball is started in earnest, let it be kept

going till Passer domestiens shall indeed be a rara avis. Washington, D. C., March 27th.

As an instance of the value which is placed upon the English sparrow in Germany, where it is most plentiful, I quote from a report by a prominent official of Saxony Herryon Langsdorff. He says: "A scientific investiga-tion of humerous sparrows' stomachs has shown that those plebeians of the feathered tribe live exclusively on grain during a time of eight or nine months; not to enlarge upon the further fact that the sparrows by their raids on seeds and growing vegetables, cherries, grapes, ripening grain, etc., frequently cause considerable damage," The Board of Agriculture for the Kingdom of Saxony requested Government to abolish the laws protecting sparrows

A high scientific authority, A. E. Brehm, who formerly had defended the sparrow as a bird rather useful than otherwise, has changed his opinion lately upon convincing evidence, and now declares that "this parasite, which lives at the expense of man, does not deserve protection."

Other writers state the sparrow is driving away the most useful birds, and place the damage caused by a pair at from fifty to seventy-five cents annually.

It will be seen from the opinions quoted, that "the in-nocent little fellow" (see Forest and Stream, p. 105) is looked upon as a little pest by the Germans, and, from my personal knowledge, I cannot but share that opinion.

RICHARD W. (Texas.)

SMITHSONIAN INSTITUTION, WASHINGTON, D. C., April 2d.

Editor Forest and Stream:

A private letter, recently addressed to me by Sir Ferdinand von Mueller, K. C. M. G., the Government Botanist at Victoria, Australia, shows that the European sparrow is regarded with as little favor there as here, by those competent to judge. The publication of the communication may interest your readers, and be of use in showing that the sparrow becomes a pest wherever introduced The history of the nuisance in this country repeats itself in every quarter of the globe. Says the Baron :-

The history of the nuisance in this country repeats itself in every quarter of the globe. Says the Baron:—

It may be of some interest to you, dear Dr. Coues, to learn what my Australian experiences are, regarding the introduction of the Passer domesticus; hence these few lines of a stranger to you. Nothing can be more regretted than the introduction of these intrusive birds into this part of the globe, where it has not to cope with cold winters, where it breeds all the year round, and drives away from our domiciles the native insectivorous birds. One swallow will, I think, do a thousand times more good than a sparrow in destroying insects, though everyone is aware that this bird will carry lots of small grubs to its young in the nest. But that does not compensate for the mischief done to the buds of our trees, the fruits of our gardens, and the harvest of our fields, by the sparrow. Nearly all kinds of orchard fruits are destroyed or damaged through the sparrows preying upon them, more particularly in centers of population, where they are more safe against larger carnivorous birds. I was personally against the introduction of the sparrow into Australia, having noticed that in Denmark and Germany, during my boyhood, agriculturists endeavored to keep down the sparrow; and anticipating the disproportionate multiplication of this irrepressible bird in a clime like ours in the warm, temperate zone, I should regard it a favor if you could inform me of any advisable measures, which, in your part of the world, have been adopted to check the inordinate increase of these birds; and whether the old observation of Bradley is there borne out, according to which a single pair of sparrows will destroy 3,300 grubs in one week while feeding their young? Would you advise to introduce Collurio horealts into Australia, with the view of waging war with the sparrow?

With every feeling of respect, I remain, dear Dr. Coues, Yours,

I regret to add, that I shall be obliged to inform the Baron that in this country, in spite of the warnings and protests of those competent to judge, maudlin sentimnt and pig-headed stupidity have fostered and encouraged instead of exterminating the pests. Your truly,

ELLIOTT COUES

While standing in the front part of the store the other day, looking across the street, my attention was called to the action of a large rat, which stole out from under the curbstone across the way. Slowly and stealthily he crept along, and I soon saw that his attention was fixed on a flock of English sparrows that were regaling themselves with much vociferation on the sweepings from a restaurant, which had lodged themselves in the gutter. Arriving within leaping distance, the rodent made a sudden spring, seized a fat hen sparrow, and disappeared under the wall. It strikes me that a consummation devoutly to be hoped for has been reached, when vermin prey on EDW. M. SCHUCHART. vermin.

Dansville, N. Y., March 28d.

Editor Forest and Stream :-

I never have known a question pertaining to the aninal kingdom that has perplexed me as that relative to the English sparrows has. I believe in giving the broadest liberty and amplest protection to all the birds of the air and all the beasts of the field, consistent with human affairs. I feel that naturally the Passer domesticus is entitled to life, liberty and the pursuit of happiness, but he certainly gives us as little in return for care and pro-tection as any living thing. He never sings, never utters a note that is not annoying, is fighting half his time, and when compared with his lovely congener, the songsparrow, is an unmitigated nuisance. However, in this note I only want to refer to things, not discuss them. With Dr. Coues here in striking distance, so to speak, one has to be very careful how he talks ornithology, and especially how he touches upon the sparrow ques-

The following extract from a letter to Col. Rhodes, of Quebcc, takes the other side of the question :-

Quebec, takes the other side of the question:—

Ary Dear Colonel—I have given orders to one of the men to keep a sharp lookout, and to shoot the shrike. The poor sparrows had a rough time of it during the last cold snap. We picked up several frozen stiff and stark. However, the flock that frequents this part of the city has increased greatly in numbers during the last two years. I put up a house for them outside my window some years ago, but the swallows drove them away from it every summer, and took possession, and now they won't come near it. I always thought as parrow could lick any bird of its own weight until I saw the masterly manner they were handled by the swallows. A. H.

FALCO SACER NEAR MONTREAL.—Editor Forest and Stream:—I have three specimens of Falco sacer which were brought into our market at Montreal, and must undoubtedly have been killed within a few miles of the city. These specimens are very fine and are of both sexes. The habitant who sold me the specimens had not himself killed the birds, but had purchased them along with come wild duels from another works.

shimself killed the birds, but had purchased them along with some wild ducks from another party.

A typical F. sacer (determined by Mr. Robert Ridgeway from a photograph sent to him) was also killed by Mr. E. O. Damon, of Northampton, Mass., in the carly part of February last, 1880. According to this gentleman the bird sat or perched very erect, and when alarmed "dropped like a bolt." It was shot while thus stooping. It is my belief that this species is less rare than is generally supposed. The resemblance between the F. sacer and the race designated F. labradora is very cless; but in the case of the latter, F. obsoletus, is the name under which the first specimen procured was described and which consequently should henceforth be recognized.

Montreal, March 21st.

New Testimony on the Mink Question.—Your correspondent's yarn about a mink remaining tenhours under water reminds me of a tale I heard on board ship. A Cape water reminds me of a tale I heard on board ship. A Cape Cod fisherman, with his wife and boy, were out in the boat one day, when the old man and woman disagreed about something. The old fellow, enraged at her abuse, struck at her with his oar; in endeavoring to avoid the blow, she fell overboard. The fisherman, now thoroughly alarmed, called to the boy to catch hold of her when she came up; but after waiting a short time, she didn't make her appearance.

but after waters a constraint picter!" said the old man, "she won't come up if she thinks we are waiting for her; let's row away a spell."
"Wall," said the boy, "her'll have to come up to blow before long, any way."

Peregrine.

Hish Guliure. FISH AS FOOD.

BY PROF. W. O. ATWATER, OF WESLEYAN UNIVERSITY, MIDDLETOWN, CONN.

Mr. President and Gentlemen of the American Fish Cultural Association.—

The subject to which your attention is invited this morning is the study of the food values of some of our different sorts of fish, as shown by chemical analysis. The field of investigation is comparatively new, and, as respects American fishes, hitherto almost unirodden. It is, nevertheless, important.

At the instance of Prof. Baird, Secretary of the Smithsonian Institution and United States Pish Commissioner, through whose interest in the matter an appropriation for the purpose has been secured, I have been engaged, with my assistants, for some time past in the analysis of samples of our more common food fishes. From a preliminary report of this work, soon to uppear, the following figures are taken. Before giving the results, however, permit me a few words by way of introduction.

Pish constitute one of our most valuable sources of nourishment. They live upon matter dissolved or suspended in the water or found on the bottom of streams, lakes and the ocean, and thus gather for us autitive material, which without them we could not have. And since cheap and wholesome food is fundamental to the material prosperity, culture and even the morality of a people, it follows that fish culture may be made an important factor of our national welfare.

I deem myself particularly fortunate in the opportunity of presenting this topic to an Association which has done, and is doing, so much to further the good cause of fish culture.

THE TASTE FOR FISH,

of fish culture.

The taste for fish.

I think, is a thing that advances with the advance of civilization. The tastes of different civilizations vury, however. We read of Roman nobles who were in the way of paying twenty-five hundred essterces (one hundred dollars) for a single lampey, and twelve thousand and even twenty-five thousand sesterces for a six-pound mullet, and considered only the livers and gills of these fish fit to set before an emperor. We are told that they sent ships to foreign lands for fish; that they built reservoirs for breeding them at home; that they built reservoirs for breeding them at home; that they fed them with veal soaked in hunan blood, and even with the flesh of slaves sacrificed for the purpose. But this was part of an imperial shoddyism that would devote four hundred thousand sesterces to a single banquet whose guests were content with gross cooking and grosser accompaniments if they could be regaled with peacocks' brains and singing birds' tongues.

The fish to please the taste of the members of this Association would be served with less splendor and more wholesome sauce. We of to-day ask for palatable and nutritious food, and, with the increasing culture of our palates and consequent call for variety, we demand more and more kinds, and larger and larger quantities of fish, the first of the fish.

THE FLESH OF FISH,

The flesh of fish does not differ essentially from that of mammals. To the epicure it is more dainty, while the poor man can purchase nutritive materials in dried and salt fish for only a fraction of their cost in ordinary

meats.

In general, fish has somewhat more water and less In general, fish has somewhat more water and less solids than the beef, pork, mutton and other common meats. Like the latter, the fatter it is the less water it contains. The amount of fat in the flesh of different species of fish, and in the same fish at different times, varies widely. Cod, bass and bluefish have usually but little fat, while the flesh of eels, shad, trout and salmon, in their season, is very fat. With the leaner fish we use butter or oil to make up the deficiency of fat.

For the best apprehension of our subject, it will be well to devote a few minutes to

THE CHEMISTRY OF FOODS,

We cat meat and fish, milk and bread, to build up our
bodies, to repair their wastes, to supply heat to keep ourselves warm, and strength with which to work. This i:

the common way of putting it. Speaking as chemists and physiologists, we should say that our food supplies, beside mineral substances and water, albuminoids, carbohydrates and fats, whose functions are to be transformed into the tissues and fluids of the body, muscle and tendon, blood and bone, and by their consumption to produce heat and force. That we may fix more clearly in our minds the nature and functions of the food materials, allow me to call your attention to the table before you, in which I have tried to condense some of the more important facts respecting foods and nutrition:—

NUTRIENTS OF FOODS.

ALBUMINOIDS, CARBOHYDRATES AND FATS.

ALBUMINOIDS OR PROTEIN COMPOUNDS.

NITROGENOUS.
Contain Carbon, (Expen, Ilphrogen, and Nitrogen.
In Plants.—Albumin; Casein; Fibrin, e.g., in gluien of wheal.
In Animal Body.—Albumin; e.g., in blood serum and white of

CARROHVIRATES

NON-NITROGENOUS.

Ousist of Carbon, Oxygen, and Hydrogen.

In Plants.—Sugar; Starch; Crllulose (in woody fiber). In Animal Body.—Inostre (sugar). In Milk.—Milk Sugar.

FAAR.
NON-NITROGENOUS.
Consist of Carbon, Orygen, and Hydregen.
In Plants.—Vegetable Fats and Olls; e. g., linseed oil, plive

In Animal Body.-Fars; e.g., fat meat, tallow, lard, etc. In Milk,-Far (butter).

FUNCTIONS OF FOOD INGREDIENTS IN NUTRITION.

NUTRIENTS OF FOODS OFFICES IN BODY

ALBUMNOIDS. Large Street Stree

CARBOHYDRATES. Serve chiefly for Fuel.

PATS: Serve Chiefly for Fuel.

PATS: Serve Chiefly for Fuel.

CALBOHYDRATES, e.g., in meat and butter.

CALBOHYDRATES, e.g., in lik sugar.

CALBOHYDRATES, e.g., in lik sugar.

CALBOHYDRATES, e.g., in lik sugar. FATS. Att.

All. Contribute to the production of Muscular Force (7).

This schedule seems somewhat complicated at first sight, as well it may when we consider the amount of painstaking and costly scientific investigation, some of whose main results it attempts to summarize.

If the time and place permitted, I should be glad to tell you something of the ways in which the facts, as far as we know them, have been found out; of the thousands of chemical analyses of vegetable and animal substances that constitute our foods and the tissues and fluids of our bodies; of the years and years of labor of many men that have been devoted to the experimental study of the ways in which the food is used, the body built up, and its tissues consumed again; of the wonderfully complicated and yet beautifully simple instruments and operations by whose aid the utmost ingenuity of science has sought to discover the subtle processes by which the transformations go on in the body and flesh and fat are stored and heat and force produced. Suffice it to say, that the research of the past fifteen years, especially, has taught us much of the fundamental principles of nutrition, though we are still in the dark as to many of the details, as the interrogation point after the last word in the schedule implies. So let us return to our subject—the nutrients of our foods and their function, in murition. Leaving out of account the water and mineral substances which, though essential to nutrition, me not to our present purpose, we have three classes of nutrients in our foods—albuminoids, carbohydrates and fats.

ALBUMINOIDS, PROTOPLASM.

ents in our 1000s—albummoids, carbohydrates and fats.

Albummoids, carbohydrates and fats.

A little short of a dozen years ago, many earnest-minded people on both sides of the Atlantic were startled by an address from Prof. Huxley, on "A Physical Basis of Life." This "formal basis of life," this soulless substance in which vital phenomena were centered while vitality, as a force, was excluded, was protaplasm, a material containing "the four elements, carbon, hydrogen, oxygen and nitrogen, in very complex union. . . . To this complex combination the name protein has been applied, and if we use this term with such caution as may properly arise out of our comparative ignorance of the things for which it stands, it may be truly said that all protoplasm is protinaceous, or, as the white or albumen of an egg is one of the commonest examples of a nearly pure protein matter, we may say that all living matter is more or less albuminoid."

As the schedule indicates, we have albuminoids in plants, as in the gluten of wheat; and in the animal body, as in the fibrin of muscle, in eggalbumin (white of eggs), and in the casein (curd) of milk.

The albuminoids are the most important of the nutrients of foods. Not only do they share in the formation of the fatty tissness and in the supply of material for the production of animal heat and muscular power, thus performing all of the functions of the other food incredit-

production of animal heat and muscular power, thus performing all of the functions of the other food ingredients in the body; but they also have a work of their own in the building up of the nitrogenous tissues, muscles, tendons, cartilage, etc., in which none of the other ingredients can share.

THE CARBOHYDRATES,

THE CARBOHYDRATES, of which we have familiar examples in sugar, starch and cellulose, differ from the albuminoids in that they have no nitrogen. They have, according to the best experimental evidence, no share in the formation of nitrogenous tissues in the body. It is lardly probable that they are transferred into fats to any considerable extent; their chief use seems to be to supply fuel for the production of animal heat, and very probably of muscular power. They are very important constituents of foods, but much less so than the albuminoids and fats. They occur in only minute proportion in meats, fish and like animal foods. We are well acquainted with

THE FATS, as they occur in vegetable fats and oils, like linseed and olive oils, in fat meat, tallow and lard, and in butter.

Il Red Sauprer—Entraits, head, stan, etc., removes...

The fats, like the carbohydrates, are destitute of nitrogen. The fats of the food we ent are stored in the body as fats, transformed into carbohydrates, and serve for fuel, but do not form nitrogenous tissue. They are more valuable than the carbohydrates, because they are richer in carbon and hydrogep, the elements which give value to (tuel, and because they supply the body with fats.

The albuminoids are often spoken of as the "flesh formers," and the caroohydrates and fats as "respiratory" substances. It was formerly believed, too, that the albuminoids alone can be transformed into the nitrogenous tissues of the body. The functions of respiration and production of muscular energy are in all probability shared by all the nutrients.

To resume briefly—asking your pardon for the repetition—the aluminoids, the nitrogenous constituents of foods (albumen, fibrin, etc.), which make the lean meat, the muscle, the connective tissues, skin, and so on, are the most important of the nutrients. Next in importance come the fats, and last, the carbohydrates—sugar,

the muscle, the connective tissues, skin, and so on, are the most important of the nutrients. Next in importance come the fats, and last, the carbohydrates—sugar, starch and the like. One reason of the inferior position of the carbohydrates is the fact that they have no nirrogen. The albuminoids can do their own work and all the work of the carbohydrates and fats as well, while these latter can only do their own. With lean meat alone, we might make a shift to get on for a good while, but with carbohydrates and fats alone we should speedily starve.

starve.

Now, the flesh of fish, like other unimal foods, consists mainly of albuminoids, but has more or less of fats, and contains very little of the carbohydrates. Vegetable foods, on the other hand, consist largely of carbohydrates, and contain less of the albuminoids and fats. Science and experience unite in testifying that a proper combination of all makes the most wholesome, as we know it gives the most agreeable, diet.

Lot us, then, note some of the maing facts concerning

THE CHEMICAL COMPOSITION OF FISH,

Let us, then, note some of the maing facts concerning The CHEMICAL COMPOSITION OF FISH.

Table I. herewith gives the results of a number of analyses as samples of fish, some supplied through the courtesies of Mr. E. G. Blackford, of your Association, and some purchased at the fish markets in Middletown, Coma, where the analyses were made. Some of the samples were entire fish, others had been dressed. All were taken as they are ordinarily sold in the markets. Each sample on its receipt at the laboratory was weighed, then the flesh (the ceitible portion) was separated as carefully as practicable from the skin, bones, entrails, etc., weighed and prepared for analysis.

The figures in the table show, first, the composition of the flesh (the ceitible portion), freed from skin, bones, entrails, etc.; and second, the calculated composition of the whole fish—that is, of the whole sample as received, including, in some cases, the entire fish, and in others, the dressed fish.

Taking the flesh (the ceitible portion), one of the first points that strikes us in looking down the rather cumbrous columns of figures, is the difference in the amounts of water in the different samples.

In one hundred pounds of flesh of cod we have eighty—three of water, and only seventeen of solids, while the flesh of the salmon contains only 60\(\text{p} \) per cent. of water and 33\(\text{p} \) per cent. of solids. That is to say, about one-sixth of the flesh of cod and one-third of that of salmon consisted of solids, actual nutritive substances, the rest being water. The figures for some of the samples are:—

est being water. The figures for some of the samples

| | | | |

A good quality of beef, lean meat, free from bone, tains about 75 per cent. water and 95

A good quality of beef, lean meat, free from bone, contains about 75 per cent. water and 25 per cent. solids, while the fat beef may have as low as 55 per cent. solids, while the fat beef may have as low as 55 per cent. of water. The fish arc, on the whole, rather more watery than beef. Still the difference is not very great.

One of the samples, I confess, has disappointed me. With an enthusiastic sportsman's appreciation of both the game qualities and the flavor of the speckled trout, I had looked for a higher percontage of solids in the flesh of that most respected lish. The sample stands well, to be sure, but not at the top of the list. But I take consolation in the fact that this is only a single analysis, and perhaps future results will show that it is below the averago. The sample was a cultivated trout, and until we are assured to the contrary, we can assume that in his native streams he would have as solid flesh as his only superior in the sportsman's eyes, the salmon, sportsman's eyes, the salmon,

If now we consider not simply the flesh, the edible portion, but whole sample, as sold in the markets, either in the entire fish, or that which is left after it is dressed,

FLESH -EDIBLE PORTION. WHOLE OR DRESSED FISH.

bortion, but whole sample, as sold in the markets, either in the entire fish, or that which is left after it is dressed, we have, of course, different figures, just as the percentage of edible solids in a roast of beef would be less than in the meat without the bone.

Looking down the last column of Table I, we find that the sample of flounder contained 7.1 per cent, of edible solids; cod, 10.5 do.; mackerel, 11.4 do.; hatibut, fatter, 27.2 do.; shad, 14.8 do.; shall, 18.7 do.; lake trout, 13.6 do.; shalmon, 25.6 do. I ought to say that these figures are based upon our separations, in the laboratory, of the fresh, uncooked fish. It is not as easy to get the lesh off clean from the bomes in this way, as it is after the fish has been cooked. So in the very bony fish more of the flesh went to waste than would be the case at the table in an economical household. Such fish therefore appear at somewhat of a disadvantage in the figures above. I should add that many of the details of the analyses, such as the percentage of so-called "extractive matters," albumen, gelatine, phosphorous, suithur and other ingredients are omitted from the table. Some of them, however, an very important. We all know what a useful article \(\text{c} \) commerce is "Liebig's Meat Extract," which is prepared from the flesh of cattle shaughtered in South America and Texas. Fish can furnish an extract of equal value in every way. There is a fortune for somebody, I mistrust, in the extract from menhader in every way. There is a fortune for somebody, I mistrust, in the extract from menhader in every way. There is a fortune for somebody, I mistrust, in the extract from menhader in every way. There is a fortune for somebody, I mistrust, in the extract from menhader in every way.

THE NUTRITIVE VALUES OF FOODS.

THE NUTHITIVE VALUES OF FOODS.

This subject has of late begun to attract very general attention. The chemico-physiological research of the past two decades has brought us where we can judge with a considerable degree of accuracy, from the chemical composition of a food material, what is its value, as compared with other foods, for nourishment. The bulk of the best late investigation of this subject has been made in Germany, where chemists and physiologists bave already got so far as to feel themselves warranted in computing the nutritive values of foods and arranging them in tables which are coming into popular use.

The valuations are based upon the amounts of albuminoids, carbohydrates and fats.

From one by Dr. König, who has given more attention to this especial subject than anybody else, I cite a number of analyses and valuations of meat, milk, etc., and add corresponding computations for some of the samples of fish reported above. (See Table II.) The analyses of

cured fish, however, are from Dr. König, our work having extended, as yet, only to fresh fish.

This table will help us to a very fair idea of the comparative composition of some of our more common animal foods. The percentages refer to the fresh substance, except as when especially stated as "dried," "smoked," etc. In the meats and fish the bomes are excluded, the calculations referring only to the edible portions. The "extractive matters" are essentially the carbohydrates, which in the fish are of little moment, and omitted in both tables. These must not be confounded with the "extract" referred to above, which includes nitrogenous and mineral substances also.

Looking down the first column we see that while medium beef contains 72 per cent. of water milk contains 874 per cent. Roughly speaking, beefsteak is about three-fourths, and milk seven-eighths, water. A pound of beefsteak would thus contain four ounces of solids, and if we asume a pint of milk to weigh a pound, a quart would contain four ounces of solids also; that is, a pound of steak and a quart of milk contain about the same weight of actual nutrients. But we know that for or dinary use the pound of beefsteak is worth more for food than the quart of milk. Thereason is simple. The solids of the lean steak are nearly all abbuniond, while those of the milk consist largely of fats and milk sugar, a carbohydrate.

The figures in the table are, I think, worth looking hyd

The figures in the table are, I think, worth looking The figures in the table are, I think, worm howing through with some care. Remembering that those for meat and fish apply to only the edible portion, let me call your attention, first, to the varying proportions of albuminoids and fats in the second and third columns. On the whole you will notice that the fish average about the same percentages of albuminoids as the meats, but have rather less fats.

rather less fats.

RELATIVE NUTRITIVE VALUES OF THE ANIMAL FOODS.

The figures in the last column are intended to show how the foods compare in nutritive value, "medium beet" being taken as the standard. They are computed by ascribing certain values to the albuminoids and fats and taking the sum in each case for the value of that particular food. The ratio here adopted, which assumes one pound of albuminoids to be equal to three pounds of fats, is that assumed by prominent German chemists. Taking medium beef at 100, the same weight of milk comes to 23.8; butter, 124; mutton, medium, 36.6; fat pork, 116; smoked berf, 140, and so on. The different samples of fish run from flounders, 65; cod, 69; shad, 39; whitefish, 103, to salmon, 104, while dried cod leads the list at 346.

These figures differ widely from the market values. RELATIVE NUTRITIVE VALUES OF THE ANIMAL FOODS.

These figures differ widely from the market values. But we pay for our foods according, not to their value for nourishing our bodies, but to their agreeableness to our palates.

CHEAP VERSUS DEAR FOOD,

Taking the samples of fish at their retail prices in the Middletown markets, the total cdible solids in striped bass came to about \$2.30 per pound, while in the Connections base same to about \$2.30 per pound, while in the Connecticut River salmon, whose price—thanks to our Fish Commission—was very low, we bought nutritive material at forty-four cents per pound. The cost of the nutritive material in one sample of halibut was fifty-seven cents, and in the other \$4.15 per pound, though both were bought in the same place at the same price, fifteen cents per yound cross weight.

bough in the same place at the same place, freen cens per pound, gross weight.

It makes very little difference to the man with five thousand dollurs a year whether he pays twenty-five cents or five dollars a pound for the albuminoids of his food, but it does make a difference to the housewife,

cents or five dollars a pound for the albuminoids of his food, but it does make a difference to the housewife, whose family must live on five hundred dollars a year. And a little definite knowledge of this sort will be of material help to her in furnishing her table economically. The cookbooks and newspapers have occasionally something to say upon these points, but their statements are apt to be as vague and wild as in the lack of authoritative information they might be expected to be.

Of course the nutritive valuations above given are only approximate, since they are made with very imperfect knowledge of either the digestibility of the foods or the influence of palatibility and other factors upon their untritive value, and also because they are based upon very few analyses. But it is certain that we need to know more about these things, and that such investigations, as more about these things, and that such investigations, as I have been telling you about, may help us toward that

I have been telling you about, may help us toward that knowledge.

Before closing I ought perhaps to refer briefly to the very widespread but unfounded notion, that fish is particularly valuable for frain food, because of its large contents of phosphorus. Siffice it to say, that there is no evidence as yet (though we hope to have more data before long) to prove that the flesh of fish is especially richer in phosphorus than other meats, and that, even if it were so, there is no proof that it would be on that account more valuable for brain food. The questions of the nourishment of the brain and the sources of intellectual energy, are too abstruse for speedy solution in the presence.

nourishment of the brain and the sources of intellectual energy, are too abstruse for speedy solution in the present condition of our knowledge.

In conclusion I have to say, that I should be very sorry to be understood as implying that the facts I have given you exhaust, or even begin to cover the subject we have been considering. They are only the very feeble and imperfect beginnings of a kind of investigation, which, if sufficiently encouraged and rightly carried on, may hereafter bring knowledge of the greatest value. And, let me add, that while scientific research does so much to promote our material welfare, its highest value is in what it does for the culture of our minds.

NEW FACTS REGARDING CALIFORNIA SALMON.

Through the courtesy of Prof. Spencer F. Baird, we have received the following interesting correspondence, which details certain facts regarding the habits of the California salmon, not generally known :-

California salmon, not generally known:—
Lower Soda Strenge, Shasta Co., Cal., March 21.

Prof. Spencer F. Baird, United States Commissioner
Fish and Fisheries.

DEAR Str. Since my last letter to you, Mr. Geo, Campbell has made, by accident, what we consider a wonderful discovery in the way of young salmon.

Mr. Campbell has a fish-pond stocked with trout, and
he was engaged hauling gravel from the Sacramento
River to put into his runway-for his trout to deposit their
spawn in, In shoveling up the gravel in the shallow

water, he discovered a great quantity of young salmon; many of them were deposited two feet deep in the gravel. After making the discovery, Mr. Campbell devised a plan to procure a large quantity of the young salmon by using line wire tacked to strips of wood. One man would place in owire tacked to strips of wood. One man would place the wire sieve below the spawning beds, and one man, with a shovel, would scoop up the gravel, when the young salmon would wash down against the screen, and in that way he caught about thirteen thousand, which he has put into his ponds. The young salmon are roore than one inch long. Occasionally he would find a half dozen or more that were dead, owing, I suppose, to the compactness of the gravel, so they could not extricate themselves. The salmon spawn in the Sacramento River in September. Hence, they have lain there ever since. Mr. Campbell informs me that he has seen young salmon in his ditch, which is led from the river, for the last six weeks. The Sacramento River is very low, and has been during the winter, which, I suppose, accounts for the young salmon still remaining in the spawning-beds.

Mr. Campbell proposes to try an experiment with the young salmon by confining them in his ponds. He tells me that they are very lively, and take their feed with a retish.

relish.

I think, from my own observations for more than twenty years, that the most of the young salmon go to the ocean during the spring freshets. However, there are a great many that remain during the summer, but leave in the fall. I have caught a great many during the months of July and August, angling for trout. I am, very truly,

WASHINGTON BAILEY. very truly,

CHARLESTOWN, N. H., April 5th.

Prof. Spencer F. Baird, United States Commissioner
Fish and Fisheries.

Dear Sir: Yours of March 30th, inclosing Mr. Bailey's

letter about young salmon being found in gravel, is

Ceived.

I have long been aware of this habit, which young salmonidas have of living in the gravel beds of streams. In fact, they are born there, and, I suppose, remain there for safety. They have surprising muscular power for their size, as you well know, and can work their way through any compact gravel with great facility. It is my opinion that when they are persecuted by larger fish in the river above them, they live and travel long distances, like the Christians in the catacombs, through the honeycombed ground below their enemies, which they find far more easily traversed than is generally supposed. In some instances, of course, they get imprisoned and crushed to death, but I am certain that it is a very tight place that they can't get out of. In some other instances, as they are always heading up streams in the gravel, they get into tight places, having no outlet at the upper end, as they are always heading up streams in the gravel, they get into tight places, having no outlet at the upper end, where they starve because they have no room to turn around and get back again. They are very fearless, however, about venturing into a bank of gravel, and I have often known young trout to work their way through an embankment that you would suppose no living creature exolution through.

embankment that you would suppose no living creature could get through.

Mr. Bailey is undoubtedly mistaken in thinking that the salmon fry go to the ocean with the spring freshots. True to the habits of the salmon, they go up stream with a rush of water, and not down stream, very likely availing themselves of the opportunity which the freshet gives them of passing unnoticed by their enemies from their gravelly fastnesses to their summer retreats. At all events it is certain that they could not do this in low their graveny fastnesses to their summer retreats. At all events, it is certain that they could not do this in low water with the least chance of safety, for the trout are all the time watching over the gravel beds like cats at a mouse hole. Very truly yours,

LIVINGSTONE STONE.

Sea and River Fishing.

EISH IN SEASON IN APRIL

Speckled Trout, Salvelinus fontinalis; Land-locked Salmon, Salmo gloveri; Smelts.

GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, Country; means of access; flotic and other accommodations; Game and its Season; Fish and its season: Boats, Guides, etc.; Name of person to address.

-Mr. Geo. E. Call is credited with the capture of a four and a half pound trout in the Nissequague River, Long Island, last Thursday. The fish measured twenty one inches.

BLACK BASS FISHING IN WEST VIRGINIA.-The Green brier River, West Virginia, has been stocked with black bass, and will afford magnificent sport in the coming season. They can be taken at Greenbrier, Ronceverte and Talcott, reached via the Chesapeake and Ohio Railroad; also at New River Falls.

Connecticut.-Two monster trout, weighing respect ively three pounds rud two pounds and litteen and a half ourses, were caught in a Putnam pond, near the Rhode Island line, April 5th,

Connecticut—Bridgeport, Conn., April 9th.—Mr. D. Sterling and myself this day brought to creel twenty trout; total weight, four and a half pounds; time of fishing, from 8 A.M. to 5 P.M. The last account I sent you was of twelve trout from half a pound down; total weight, three pounds; time, from 11 A.M. to 4 P.M. While dressing trout yesterday we discovered several hundreds of fine worms about an inch long and size of pins, color white, in a bunch, near the heart. We have caught many fish, but never saw anything like it before. J.U.S.

CONNECTICUT .- Putnam -On the 4th inst., Mr. A. F. F CONNECTICUT.—Futham.—On the 4th inst., Mr. A. F. Sheldon caught three trout which weighed nine pounds, one ounce; they were as large as shad; he caught them in the saw-nill pond in East Thompson, near Keach's store. They were sent to New York by Mr. Goodhue and were seen in Fulton Market. There are once in a while

some very large trout caught in this pond. They were some very large trout caugin in this point. They occur caught in fifteen feet of water, fishing with worms from the dam. Large trout are often seen there, but few taken. A very large one, soid to be four feet long, was seen, but would not bite; also a very large one was hooked, but got away.

New Jersey—Newark, April 12th.—The Essex Fishing Club have elected the following officers: President, Abra-ham Johnson; Vice-President, Wm. H. Lyle; Secretary, John H. Huegel; Treasurer, David Thompson: Captain, Wm. H. Cleveland. Meetings of the club will be held semi-monthly at their rooms, 326 Bank street.

A BLIND TOMCOD.—John McKay, of Carmansville, N. Y., while fishing for bass off the old Bennett dock, at Fort Washington, last week, caught a little tomcod. On examination the fish was discovered to have no eyes. Yesterday it was dissected by a number of scientific experts, who failed to find any trace whatever of optical organs.

organs.

A PARIOTIC SPORTSMAN.—Eagle's Nest, March 20th.—

Editor Forest and Stream:—"I hope I don't intrude,"
but I do want to say a word to native sportsmen about
native industries. There are people who believe no article,
and scarcely any animal, is first class without it is imported. I am not one of that class. I have an American
shot gun, two American rifles and three American flyrods, and I defy anyone to produce better of foreign
make. I have a fly-book fairly stocked with American
flies (made by Abbey & Imbrie; Conroy, Bisset & Malleson), and have just ordered another fly-rod and a full
summer stock of flies from Charles F, Orvis. So you see
it is deeds as well as words with me. Why should not
we, whose woods and waters cannot in all the world be
excelled for game, fowl and fish, and whose annals give it is deeds as well as words when he we, whose woods and waters cannot in all the world be excelled for game, fowl and fish, and whose annals give proof of sportsmen second to none in the wide, wide world, be able to supply those sportsmen with all the material for use and wear in the field, forest and stream? Why can we not raise as good stock as we can import? I say we can, and as a full-blooded native, counting over two centuries back, I mean to stand by native industry as long as I draw sight over a gun-barrel or handle a rod. Yours, in the faith of Walton and woodcraft, Nep Buntling.

NED BUNTLINE.

FISHING IN IRELAND.—The Killarney correspondence of the London Field has the following account of an Irish method of fishing, which our correspondent forgot to mention in his entertaining sketch last week: "This gentleman has a novel way of landing his fish, which your readers may not find uninteresting. A garl he dispenses with altogether, the substitute being a well-trained spaniel, which at a signal from his master plunges into the water, and never fails to kand his salmon in much less time and a great deal more security than his master could with his gaff, having sometimes to divo to the very bottom of the pool before being able to secure his prey."

The Hennel.

All communications asking advice in regard to the treatment of sick dogs, should reach us before Tuesday of each week to insure a reply in the issue of the follow-Thursday.

SOMETHING ABOUT BREAKERS AND DOG BREAKING.

THIRD PAPER.

N this country, where our shooting grounds are for the most part in wild sections, and are either intersected by unbridged streams, or the land is portioned off by sluggish ditches, which, to our cost, we find have no bottom, it is absolutely necessary that both pointer and setter should be broken to retrieve. Unless you have taught your dog to fetch and carry at home, and he has been thoroughly broken to retrieve on both land and water, you will leave many birds behind you eutangled in the grass and thickets, and many more just across some unjumpable strips of water. If there is one thing more annoying than another while out shooting, particularly if birds happen to be scarce, it is to make a rattling good shot and then be unable to bag the bird. rattling good shot and then be unable to bag the bird. How frequently do we see our fellow-sportsmen in this sad plight. The bird has fallen in open sight, on the far side of a wide ditch, and during the first five minutes is contemplated with longing eyes. The next five minutes will be spent in walking up and down the bank, in unsuccessful attempts to wade across, and scrambling back on the bank again. Five minutes are then employed in pointing the bird out to the dog; twice that time in conxing him to venture in a step, and intelligently requesting the dog to "Go fetch him, old fellow." It then invariably occupies many minutes more in looking for a log or renor earl. The time consumed for the remaining scenes in the pantomime depends somewhat upon the temperament of the sportsman. Turn where he will, he surely comes back again and again and looks at the bird. In turn, the luckless brute is threatened and cajoed, and the curtain often falls on seeing him take a flying visit into the middle of the pool.

If one would enjoy the perfection of a day's shooting, he must allow no disturbing element to enter into his sport. Dogs that are but carelessly and imperfectly broken, or half broken, are unworthy field companions, as they cannot give the proper satisfaction. A dog that does not perfected the proper satisfaction. A dog that does not perfected the proper satisfaction and the retrieve on their first acquaintance with game in the field; but we have never heard one sound reacen advanced why they should not be taught to fetch and deliver into your hand anything soft you many occasionally throw for them. Therefore, the next lesson to your deg should be to perfect him in seeking a ball or glove that you may throw for them. How frequently do we see our fellow-sportsmen in this

or drop for him, and having him fetch it to you, and then sit up and hold it until, bidden by the command "loose," to drop the article into your hand. Almost all pupples will run a short distance after a ball when rolled along the ground, and discover that to bring it back means to have it thrown again. Commence teaching your puppy to "fetch!" by shaking the ball or glove at him, and encouraging him to above the ready of the property of the commence of the property of the p couraging him to sieze and drag it from you. Then throw it a yard or two off, gradually increasing the distance, and the moment he delivers it to you give him something palatable. Should he have no inclination to romp or play with the glove, and if you should not be able to persuade him to pick it up between his teeth, cause him to grasp it by tightly pressing his jaws together, speaking all the while impressively to him; scoold him if he is obstinate and refuses to take hold of the glove. After a little time rotire a few paces, keeping one hand under his mouth to prevent his dropping the glove, while you lead or drag him with the other. When you halt be sure not to take the glove immediately from him; obligo him to continue holding it for at least a minute, lest he should learn to relinquish his grip too soon, before you make him yield to the command "loose," then bestow a reward. Should he drop it before he is ordered to deliver it, replace it in his mouth and again retreat several steps before ordering him to "loose." He will soon learn to follow with it at your heels.

This is all so readily learned that it is not necessary to dwell longer on it. Make it your endeavor in these lessons to have your puppy look upon the whole proceeding as a game introduced solely for his pleasure, and after he has acquitted himself rightly roward in which he has acquitted himself rightly roward in him with caesess and pieces of soft food. Let it be your aim to leave off at a moment when he has performed entirely to your satisfaction, that you may part friends, and that the last impression made by the lesson may be a pleasing as well as a correct one. Carefully avoid persevering too long a time, lest he become sick and tired of the lesson. Beware of using harsh treatment or compelling your dog at first to hold the ball in his mouth much longer than a minute; later on you can gradually increase the time as to hear by snaking the barr or give at him, and en-couraging him to sieze and drag it from you. Ther throw it a yard or two off, gradually increasing the dis-tance, and the moment he delivers it to you give him

ware of using harsh treatment or competing your avenue first to hold the ball in his mouth much longer than a minute later on you can gradually increase the time as first to hold fie bull in his mouth much longer than a minute; later on you can gradually increase the time as you may deem expedient. Do not allow your dog to acquire had habits, such as running off with the ball, mouthing it or dropping it near you. Should he do this, walk quietly away, until he learns to come instantly to you and drop the ball into your hand, for, let a dog retrieve ever so carelessly, still while on the move he will rarely drop a bird. Most probably your puppy will be unwilling to relinquish the ball to you at first; it is therefore well to teach him to sit up in front of you the instant he returns. By this you will have proper control over his movements, which will prevent him from turning or dodging away from your hand whon extended over his morements, which will prevent him from turning or dodging away from your hand when extended for the ball. Teaching a dog to sit up is readily done by taking the flows or chaps in each hand and pressing the dog back upon his haunches, at the same time commanding him to "sit up." Do not let him leave the position until the word "on" is given, which will be after the ball has been delivered into your hand. Do not attempt to pull the ball from his mouth, as he will naturally resist and try to squeeze and bite it, but teach him at the word of command, "loose," to open his mouth wide enough to let the article drop from it. This is done by grasping the nasal bone with one hand, and with the fingers and thumb pressing the flows sharply against the teeth, as this will be flows sharply against the teeth, as this will mand, "loose," to open his mouth wide enough to let the article drop from it. This is done by grasping the nasal bone with one hand, and with the lingers and thumb pressing the flows sharply against the teeth, as this will force him to drop his under Jaw; then withdraw the pressure, saying "loose," and the ball will drop into your other hand. Always repest the word "loose" while the dog feels the rubbing of his chaps on his teeth, and it will not be long before he will learn to drop whatever he may hold. All hard-mouthed dogs should be handled in this way.

way, one articularly the large, powerful ones, any dogs, particularly the large, powerful ones, a radly hard mouthed; it is therefore necessary thogs should be taught to fetch something soft, do to reason that sticks and stones must tend to ple a "hard mouth," and the fetching of these, later than the mouth misery. Some breakers may Many dogs, naturally hard mouthed; it is therefore necessary that all dogs should be taught to fetch something soft. It stands to reason that sticks and stones must tend to produce a "blard mouth," and the fetching of these, later in life, may cause him much misery. Some breakers make a young dog fetch a round pin oushion, or a cork ball, in which sharp pointed wires are securely and judiciously buried; nor is it a bad plan, and there need be no cruelty if well managert. We have found a bunch of small keys an excellent article to induce a tender mouth. In time the dog should be accustomed to bring moderately large and heavy, flexible things; this will prepare him for retrieving the large varieties of game when occasion requires. With perseverance you can soon teach your dog to be an excellent retriever, and to carry with a light mouth articles of different sizes. Col. Hutchinson says that he knew in France a fenoing master who had instructed his spaniel to take up the smallest needle. This performance we do not recommend, of course, but simply mention it to show to what perfection an intelligent animal can be brought. It has been our experience to see, in many years of shooting, but comparatively few well-trained dogs. There is too great an inclination on the part of owners to "away to the merrie green woods" before their dog has been even taught the simple rudiments of discipline at home. It is in these outings that the dog contracts the worst faults. The disposition to let the animal commit the most flagrant errors, provided the one dead or wing-proken bird is secured, is witnessed every day in the field. For the sake of one wretched bird many a fine and shout-hearted dog has been almost ruined, and many a dozen head of game lost in the future. Both pointers and setters, especially those brea by practical field dogs, are susceptible of being trained to exhibit what nature has already provided them with—a wonderful intelligence. In our opinion, there is not one sporting dog in a hundred that is educated up to his proper

The educational standard of the sporting dog in America has been placed entirely too low; for he is capable of being by constant and intimate companionship brought to perform many acts in the field that are now narrated as isolated exploits, as belonging only to the phenomenon. Does it not stand to reason that if a hybrid trick dog can be taught to exhibit in rotation, with absolute certainty and under the most distracting circumstances, a large number of tricks, many of which are contrary to all the rules of nature, that a well-bred sporting dog can be broken to do more than use his nose, approach his game

without flushing it, and retrieve it in good style? Take, for instance, the trick of walking and jumping on the fore feet. It is, perhaps, the most difficult and wearisome act in the programme. As the back-spring is to the tumbler, so is this to the trick dog, for but one dog out of twenty has the natural balance; and yet there is not a troupe of performing dogs that has not three or four animals that can step off this trick to perfection. We would have the breaker aspire to something higher than to produce a mechanically broken dog. Let his aim We would have the breaker aspire to something higher than to produce a mechanically broken dog. Let his aim be toward intellectual perfection, which he can only accomplish by the establishing of unbounded confidence between himself and his four-legged friend. Make it a study to impress upon your dog that there is a reason for everything he is commanded to do. Thus, in your lessons in retrieving, let him become conversant with every article of your apparel, and with whatever you usually carry about you, so that, should you accidentally drop anything, the observant animal will be almost certain to recover it. Allow him to see you deposit your glove in some place, and send him back for it with the orders, "dead" and "fatch;" also hide the glove where he has "and "fetch;" also hide the glove where he has ecustomed to find it, and in a variety of ways exbeen accustoment to find it, and in a variety of ways e-ercise his intelligence and test his power of scent. Va-your lessons in as many different ways as possible, ha ing him to stop before retrieving the glove, as we di-scribed he should at the command "toho," then to "fect ove, as we de-then to "fetch" scribed he should at the command "toho," then to "fetch" it, "charge" with it in his mouth without dropping it, and practice him in these orders as you will have to do when you introduce him to the field.

When you are assured that he is perfect in these lessons, and has reheared them at various places in your exercise walks, and in the presence of some steady old

exercise walks, and in the presence of some steady old dog, you may then draw on your wading boots and bagin working your dog in a spot which is a "sure find" for snipe. Common sense and practice will then decide the fate of your dog; whether bad or good, depends upon yourself. If you handle him carefully, as we have described, he cannot go far wrong. And if you would have a dog to depend upon, and one that will make your holidays both delightful to pass and look back upon, remember that to err is but doggy, and that your puppy cannot have too much good, solid work, for it is practice that makes perfect.

THE NEW YORK DOG SHOW.

THE prediction of the managers, as published in last week's issue, has been verified, and the coming show, on the 27th, 28th and 29th, will be, beyond all question, the largest dog show every held in either Europe or America. As announced, the entries closed on Monday last, but the mail still continues to bring in a large number of applications. Therefore, it is impossible as yet to form an exact estimate of the number of entries; but we are informed by Superintendent Lincoln that they will reach close upon 1,200. Taking these figures, and comparing them with those of previous New York Bench Shows, we find it an increase of about 230 on last year, the exact number of dogs exhibited in 1879 being 933; an advance of over 375 in 1878, when 834 were entered, and 325 over the first show in 1877, when the catalogue contained 874 names. Never in the past has there been anywhere such the first show in 1877, when the catalogue contained 874 names. Never in the past has there been anywhere such a largo number of sporting dogs exhibited as are now booked for the coming show, the pointer and setter classes alone amounting to over 600. It is therefore unnecessary to go further to demonstrate the wonderful interest which is taken in sporting dogs in America than to again compare this year's entries with the last, this time, however, selecting the Birmingham Show—the crack exhibition of England—of last year, when only 160 pointers and setters were shown out of the usual limited entrance of 1000 does. We are not sure that the above does not coint tien of Engiana—10 last year, when only 100 pointers and setters were shown out of the usual limited entrance of 1,000 dogs. We are not sure that the above does not point out the necessity of yet framing more stringent laws for the protection of game and for the absolute punishment of all offenders of the same.

f all offenders of the same. Since last issue many of the principal kennels in of all offenders of the same.

Since last issue many of the principal kennels in the country have sent in their entries, noticeably that of Mr. A. If. Moore, of Philadelphia, whose twenty entries are said to contain a number of recent importations. Among his other well-known dogs, Mr. Moore will exhibit the old favorite Leicester, formerly owned by Mr. H. L. Smith, of Strathroy, Ont.; the Irish setters Berkley and Duck, and the little pointer bitch Rose, once the property of Mr. Edmund Orgill. Mr. W. B. Wells, Jr. (Big Point Kennel Club, Chatham, Ont.), sends his champion Irish water spaniel Mike, which, to our knowledge, is in excellent condition; and his English setter bitch Dido, Druid-Star. Dr. S. Fleet Spier, of Brooklyn, has entered his English setter dog St. Elmo, the well-known winner of last year, both on bench and in the field, and a host of other dogs from his fine stock. Col. Braddey, also of Brooklyn, will show two magnificent greyhounds, bred by DeWolf, of Manitoba, from stock obtained from the Indians, and originally imported by Gen. Custer. These dogs are lineal descendants of the ramous English clampion Master Magrath. dogs are lineal descendants of the famous English champion Master Magrath. Among the recent additions are Mr. J. Forman Taylor's dog Turk, and the Toledo Kennel Club's dog Grouse and bitch Bee; these two have never been exhibited here. Mr. Howe, of Brooklyn, has entered his pointer Rex, winner of first last year. Mr. J. H. Whitman, of Chicago, has secured a stall for his English setter bitch Floss. Mr. M. A. Stearns, of Rochester, ends his English setter bitch Pearl, and Mr. Mercillot his English setting british extens bitch.

ter, sends his English setter bitch Teart, and Mr. Ameroiloth his English setter bitch Grace.

The steamship Arizona, which arrived here on Tuesday morning, had on board Mr. James Watson, the representative of the London Field. He had under his charge about six dogs in all, including two terrier bitches, one a black and tan and the other an Irish (which, by the

one a black and tan and the other an Irish (which, by the way, whelped four fine puppies just as the steamer passed Staten Island), a splendid Gordon setter bitch, the property of Mr. Wm. Graham, of Belfast, Ireland, and a remarkably fine bred Scotch colley dog, which, was consigned to the owner, Mr. James Lindsay, of Jersey City. The judges, Mr. Hugh Dalziel—who will represent the Live Stock Journal and not the Field, as previously stated—and Dr. Stables, sailed yesterday from Liverpool, both having a number of dogs in their care. Sir William Vernon will sail to-morrow on the Britannic, from same port, and among the splendid bull-terriers he will bring with him is the famous bull-terrier dog Tarquin.

Two new special prizes have been offered during the

when him is the ramous bull-terrier dog Tarquin. Two new special prizes have been offered during the week. Mr. deo. C. Sterling gives an engraved glass lemonade set of thirteen pieces, valued at \$25, for the best English setter, native or imported; animals receiving a

V. H. C. to be entitled to compete. Messrs. Thompson & Sons give a fine loather gun-case and an ammunition-case for the best English setter, dog or bitch; to be competed for by the winners in the champion and open lasses, both native and imported.

Dogs for the New York Show .- Exhibitors will do well to avail themselves of the following hints for marking the boxes or crates in which their dogs are shipped to New York. The address should be as follows :-

OTTO'S PARINTAGE.—Hemphis, Tenn., April 4th.—
Cotto's Parintage and Stream:—A recent issue of your
paper contains an article headed: "A Gladstone Puppy,"
and is highly laudatory of said Otto, no doubt desered.y. But only one parent is mentioned—Gladstone—and
this note is to say that Otto had a mother, even the
mother of Joe, Jr., and of the field-winner, Campbell's
Fannie; and grandam of Tom III., winner of the 1878
Nashville Nursery Stake. Buck is also half-sister of field
champion Tom, and his full-brother, Night, who won a
field championship also at Memphis, Tenn., his brother
and sister, Tom and May, winning the brace stake the
next year, all native setters of same strain. Hence I
claim Otto got a fair, full share of merit from his unmentioned dam, Buck, Jr., who beat Gladstone, in 1878,
for a purse of \$200, at Nashville, as her son Joe did (for
the third time) in December, 1879, at Florence, Ala., then
for a purse of \$1,000. As it takes a grand dog to beat
Gladstone, do not forget Otto had a ma.

Guido.

Breaking Dogs with Cold Lead.—Evington, April 5th.—Etitor Forest and Stream.—Apropos of several letters that have recently appeared in your valuable columns on breaking dogs with cold lead. I should like to make a few remarks. To teach a dog he is not to do anything, the punishment ought to be administered while he is in the act; or still better, just as he is about to commit the offense. Shooting a dog, therefore, while in the act of classing must be correct in principle, but it is dangerous and sometimes cruel, and therefore objectionable. To cure a confirmed old chaser I would recommend the following plan: Put a common twenty-five yard cord round his neck and teach him to "down charge," in doing so let every cut with the whip be accompanied with the word, "down; "drill him at this for a few minutes at a time, as often as convenient for a few days, till he immediately drops at the command (also, of course, hold up your hand). After this take him among game, with a steady dog. Do not let him out of your reach, but try and get him to forget that he has on the check-cord. As soon as your steady dog has found game take hold of the cord and watch till your wild friend finds out the fact, upon which immediately call out. "Down!" Ten co one the excitement of the moment will be too much for him, and forgetting all your instructions he will rush forward. Now (never mind your hands), give him such a jerk as will send him head over heels; go up to him and give him a few sharp cuts, not forgetting to use the word, "down" as before. This plan will soon cure him, While on the subject, let me remark that it is useless to punish a dog for chasing after he has committed the offense, except in the case of a trained dog that know he should not do it.

PENNSYLVANIA FOX HUNTING.—The East Marlborough Fox-Hunting Club, with headquarters at Dugdale, Pa., have just completed their organization, and elected the following officers: Fresident, E. G. Cloud; Secretary have just completed their organization, and elected the following officers: President, E. G. Cloud; Secretary, and Treasurer, Louis Eldridgo; Master of Hounds, J. H. Baily; with a chatter membership of sixteen, each of whom contribute to the fund to pay keeper of the company's kennel and furnishing of meat for hounds.

KENNEL NOTES.

IMPORTED DANDIE DINMONTS .- In our issue of March 25th we published a notice sent us by a correspondent that Mr. Robert Hume, of Lastville, Northumpton County, Va., had just returned from England, bringing with him a pair of Skye-teriers. Mr. If writes us that the terriers, dog and butch are Dandle Diamonis, not Skyes; and that he will exhibit them at the coming New York show. The dog won in the puppy class in Edinburgh, 1878, and the bitch is said to be equally as time.

THE TRUFFLE Dog .- Mr. Vero Shaw's serial, "The Illu Dook of the Dog," contains the following information: The truffie dog is nothing more or less than a bad small-sized poodle, and is never, or very rarely, met with under the designation truffie dog. Its cultivation is due to the existence of truffee, which it is employed to discover whon they are lying in the ground by the help of its acute nose. Any credit, therefore, attained by the truffe dog is certainly due to his better-bred relative the poorlie, as the main distinction between the two lies in the for acr being the legsier dog of the two, and therefore further remarks on the points of the truffe dog would be super-

Intyre, Pa., claims the name of Neilie Hattrick for his red Irish setter bitch, by Dirk Hattrick out of Tyke, bought of Mr. E. J.

Robbins, of Wethersfield, Coun.

Red Dash.—Mr. Ches. Georges, of Moboken, N. J., olsims the name of Red Dash for his puppy, by Lincoln & Hellyar's Ar-

magnon one of Wittenley Doe. Victor Hugo.—Mr. J. M. Haynes, of Wilmington, Ohio, claims the name of Victor Hugo for his black, white and tan puppy whelped becember 24tk, 1878, by Fown (Rock-Fussy) out of Magie Rob Roberts.

SALES.—Delta and Lottie-Mr. Henry W. Livingston, of this olty, has purchased from Mr. Geo. C. Sterling the black and white ticked English setter bitch Delta, Belton-Floss, and the lemon Belton bitch puppy Lottie, Lofty-Maud Muller.

BRED.—Clylie-Faust—St. Louis Kennel Club's Clytie to Faust.
Lucy-Victor.—Mr. N. Elmore's (Granby, Conn.) English hare
besgle bitch Lucy to Victor, April 6th.
Glipy-Jercy Duke.—Squire Smith's Gipsy to Mr. Von Lengerke's
English setter Jersey Duke, April 10th.
Beraic-Jacro.—Mr. W. B. Shattne's St. Bernard bitch Bernie to
Mr. A. E. Godeffroy's Marco.

Whelps.—Bridget—The Big Point Kennel Club's (Chatham, Out.) Irish water spaniel Bridget has whelped eight puppies, two since dead, by Champion Mike. This famous dog will be exhibited at this year's New York Show.

at this year 8 New York Show.
Silk.—Mr. A. E. Godefroy's blue Belton setter bitch Silk has whelped four pupples by owner's Decimal Dash.
Flirt.—Mr. E. Francis' (Newark, N. J.) Gordon setter bitch Flirt

hus whelped eight puppies, four dogs and four bitches, by Dr Aten's Glen, A particularly fine and healthy litter. They will be exhibited at the coming show.

Arghern.

PRIVATE PRACTICE CLUB.

MARCH SCORES.

WE THINK that a comparison of the scoring of the members We fit THNK that a compactson of the scoring of the members of the club for the months of February and of March will convince any one of the benefits to be derived from membership. No arother, however diligent, will get so much practice when there is no incentive to shoot in any and all sorts of weather as he will who feels that he is so situated that it is scarcely honest to wait for fine days to shoot, while his adversaries are facing wind and cold. Indeed, if the writer can judge from his own experience, there is a keen delight in tempting the most boisterous weather, if only to see how near one can come to conquering it. March was certainly as rough, rainy and windy a month in northern Indiana as has ever been known, and despite that fact the writer both more arrows than he ever before shot in one you one month. He managed to get some practice upon the 6th, 7th, 9th, 10th, 11th, 13th, 15th, 17th, 17th, 19th, 20th, 23d, 24th, 28th, 30th and 3fst, in all sixteen different days. In finds from the reports sent to him that many of the other members have been equally adventursome, and yot unfavorable as the opportunities have been, they canned any temperature of the more come, and yot unfavorable as the opportunities have been, the that many of the other members have been equally adventure, and yet unfavorable as he opportunities have been that some, and yet unfavorable as he opportunities have been that average of most shooters have been wonderfully. Nothing so soon convinces an archer of his true degree of skill as the paration of every score shot. Nothing offers a stronger argument for careful and patient practice than the discovery that he does not average nearly so high as he supposed he did. We all make good scores at times, and are prone to overestimate our skill. The Private Practice Club reports may cut our pride a little, but the result will be more care, more patience and rapid improvement. That archerice Club reports may cut our pride a little, but the result will be more care, more patience and rapid improvement. That archerice are davanting in skill throughout the whole country there can be no doubt, and it is safe to say that there will be more than a dozen scores of over 500 points at the Dutuble York Round at the Buffulo Grand National Meeting.

The Private Practice Club will be one of the most powerful influences by which such a result will be promoted. Because patient practice lets the only road to success in archery, it must not,

Round at the Buffulo Grand National Meeting.

The Private Practice Club will be one of the most powerful influences by which such a result will be promoted. Because patient practice is the only road to success in archery, it must not, however, be taken for granted that the greater the practice the greater will be the improvement. The evil results of over-puractice are well known to many of us, and in order to thoroughly test the limit of safe practice in his own individual case the writer has made a great many caroful experiments, the result of which thoroughly proves that in his case not more than ten Single York Rounds per month can be shot with steadiness. Whenever that limit has been passed the evil effects of over practice have made themselves visible in feeble and unsteady shooting; nearly always under such circumstances a poor score to the number of hits being recorded. The effects of foo much practice appear in the scores of several members for March. In the writer's record will be noticed a score of 41-127 at one hundred yards. Such a score clearly betrays a feeble and unnerved condition of the shooter, which in this case was wholly due to too much practice. Of course some difference should be made for the physical and nervous power of the archer, and the weight of low used, but it is safe to say that no archer should shoot over 1,500 arrows in one month. It is true that one may shoot, but wo hazard the remark that no archer can score well who does it.

The Secretary again begs to call the attention of members to the fact that many scores are still reported to him incorrecity. Thus one score appears: 17 hits 86 score, and many similar one appear. Of course an odd number of hits cannot possibly make an even number in score, and rice ersa. In all such instances the Secretary has corrected the impossibility by deducting one point from the score. He also requests of archers to make as few, fractional scores as possible. If a few arrows only can be shot upon one day at a certain rauge and the shooting is le

averages of each shooter easily made.

The record of the month of March exhibits some very fine performances at each of the ranges of the York Round. Mr. Sharpe, who has for twenty years reported the archery of Great, Britain, lays it down as a rule that fine scoring begins with a score of 140 at one hundred yards, with 150 at eighty yards, and 120 at sixty gards, or a single York Round of 440 points. This rule, be it remembered, is suggested as the measure of excellence for such verterans as Fisher, Everett, Claire, Walrond, Paldiret, Rimington, Fryer and others of the trained veterans who annually contend for the Medal of Championship of the United Kingdom. While it would be over hold to institute any comparison as yet between our own scoring and theirs, yet the March record of the Private Practice Glub exhibits some very remarkable performances. At the one hundred yards range the equal scores of 38—157, between Mr. L. L. Peddinghaus and Will H. Thompson, pass the line fixed by the English authority, le points, and may be considered creditable work for any archer. At the eighty yards range the record of Mr. Poddinghaus of 31—184, shot March 20tf; the three scores of 33—172, 39—16, and 33—177 by Mr. Maurice Thompson, abot on the 17th, 29th and 20th days of March; that of Mr. O. W. Kyle of 33—108, and that of 41–217 shot by Mr. Will H. Thompson,

March 20th, may be considered excellent work. At the sixty yards range the line drawn at 120 has been passed by Mr. Edwin Deval once, with score of 131; by Mr. O. W. Kyle twice, with best score of 139; by Mr. E. T. Church, once with 127; by Mr. L. L. Ped. dinghaus five times, with hest score of 145; by Mr. Will H. Thompson nine times, with a best score of 153, and by Mr. Maurice Thompson twelve times, with a best score of 167. This last record is the highest ever attained in America, and but one higher is the highest ever attained in America, and but one higher score at the same range has ever come to our notice among the achievements of the veterans of Great Britain. Mr. Horace A. Ford once accomplished the feat of scoring 24 hirs—188 score, with 24 arrows, at sixty yards—and, so far as we know, no other score has ever so nearly rivaled his wonderful performance, as this by Mr. Thompson. Mr. Thompson's averag; of 110 13-23 comes within less than one-half of a point of the line of "high scoring."

Several other members who did not pass the 120 limit, scored.

Several other members who did not pass the 120 limit, scored work was a very fine one, when we consider the fact that worse weather could not have been imagined.

weather could not have been longings.
The record gives ample proof of the rapid advancement of skill
among all the members, and we predict even better averages for
April. Will H. Thompson, Secretary Private Practice Club.

CRICKETERS' ASSOCIATION OF THE UNITED STATES.—The third annual meeting of this organization was held at Philadelphia on the 9th inst. The Executive Committee were instructed to arrange a match between the members of the clubs forming the Association for its benefit. The match will probably be Philadelphia vs. The United States, and will in all likelihood be played in this city early in the spring. The secretaries of the different clubs of Philadelphia will meet to-morrow afternoon at the rooms of the Association, to arrange the schedule of the matches to take place this spring.

THE CANADIAN ELEVEN.

The following is the list of the twenty-three matches already The following is the list of the twenty-three matches already arranged to be played by the Northwestern Cricket Eleven during their visit on the other side this senson: West of Soctland, at Glasgow; Humslet, at Leeds; Marylebone and ground, at London; County of Kent, at Maidstone; Stockport, at Stockport; Longsight, at Manchester; Sunderland, at Sunderland; County of Derbyshite, at Derbyshire, at Derbyshire, at Derbyshire, Dowsbury; at Dewsbury; Stombridge, at Stourbridge; Somborough, at Scarbarough; North of Ireland, at Belfast, Keighley, at Keighley; Crystal Palace, Sydenham, at London; L. H. G. Co., at Leeds; Welch Team, at Cardiff; Bowling Old Lane, at Bradford; Royton, at Royton; Birmingham, at Birmingham, Halifax, at Hullfax Swansea and District, at Swansea; and County of Leicestershire, at Leicester. at Leicester.

at Leicester.

The team will sail from Portland on the 39th instant. In our nextissue we will publish list of players and full particulars of the trip, including list of additional fixtures.

-The Oswego Falls Cricket Club has secured the services of a crack English bowler, who has just arrived. It is said his bowling has an immense "break." If this is the fact, the Onondagas will have to look out for the artful this season.

-The Hamilton Cricket Club, at its annual meeting on April

5th, elected the following officers for the ensuing year; Presidents, Mr. George Roach; Vice-Presidents, Messrs. C. J. Hope, Alex, Harvey and R. A. Lares; Treasurer, Mr. A. H. Hope; Secretary, Alex, Harvey, Jr.; Committee, Messrs. R. Kennedy, R. K. Hope, J. H. Park, H. C. Simonds and Dr. Woolverton. Fifteen members were elected, namely; Messrs. H. A. Mackelenn, A. H. Brown, H. Roper, T. Bagwell, V. A. Robertson, V. A. Plumner, T. Simson, G. A. Palmer, J. O. Keni, L. H., Brocks, C. Widdow, M. T.Stinson, G. A. Paimer, J. C. Ront, L. H. Brooks, C. Widdow, J. Wilmof, Prico Crerar, A. McClean and T. R. Christian. Mr. Park read a letter from Dr. Spragge, of Toronto, in reference to the meeting of the Ontario Cricket Association, recently held in that active indexing the rules proposed to be adopted. Mr. Hopomoved, which is a country in the count

EXERTOGE CRICKET CLUB .- A meeting of this organization was UNRIDGE CROKET CLUB.—A meeting of this organization was held in the Plank House on March 30th, when the following officers were elected for the ensuing year: President, Geo. Wheeler, Esq.; First Vice-President, T. Bolster, Esq.; Second Vice-President, I. J. Gould, Esq.; Secretary-Treasurer, Edwin R. Rogers, Esq. Committee: Messrs. Z. Hemphill, H. Bolster, W. H. Hamilton, R. W. Gliphin and C. H. Widdifield. A good ground has been secured for the season, and matches are to be arranged at an execution. early date.

UNIVERSITY OF PENNSYLVANIA CRICKET CLUE.—We are indebted to Mr. J. B. Thayer, Jr., of Philadelphia, for the following interesting remarks regarding college cricket: "We have no matches arranged as yet, but intend making fixtures with Chestinutines arranged as yet, our intend making interies win clust-nut Hill, Belmont, Germantown, Columbia and Haverford Col-leges. There is an unusually large number of men, especially Freshmen, practicing on the campus every afternoon, and we intend forming a second cleven from this material. At our next meeting I intend making a proposition to have a series of matches arranged between Columbia and Haverford Colleges and the Uni versity of Pennsylvania; these to take place on one of the Phi delphia grounds about the middle of June."

THE COLUMBUS CRICKET CLUB, which now numbers about thirty members, held its annual meeting on April 3d, when the thirty members, noto its annual meeting of April 30, when the following gentlemen were elected officers for the ensuing year: Captain, F. C. Hubbard; Assistant Captain, J. M. Milne; Director, G. W. Rhodes; Secretary, Bryan Collins; Trensurer, W. P. Little, Standing Committee: E. A. Dawson, C. T. Tyler, F. S. Knox, H. B. Hutchinson and the Secretary.

II. Hutchmson amenta the Secretary.

Young Amenta Churker Club.—Milicaukee, Wis., April 3th.—
Ten years ago, just before base-ball became popular, there was an organization which maintained a successful eleven, known as the Milwaukee Cricket Club. It disbanded when base-ball became popular, but in 1876 it was reorganized and poved victorions in matches with Chicago, Grand Rapids (Mich.) and Racine clubs. In 1871 the principal players having left the city, the interest in the game llagged, nor have we had a good eleven since. In cet in the game flagged, nor have we had a good eleven since. In 1878 there was formed the nucleus of an adult eleven named the Willow, and adult and junior elevens known as the Young America Cricket Club, also the Bay Yiow Cricket Club, in the suburbs. The latter club was several times defeated in 1879 by the Young America Cricket Club, as was also the Willow. This spring the Bay Yiew has reorganized under better auspices, which is the property of the transfer of the property of the prope spring the Bay view has some and the members of the former local clubs have been, by coalition, made members of the Young America Club. This year, for the first time, we have rented exclusively the only inclosed ball-park in the city; it is not a very level one, but much better than none at all. There are more young men interested in the game park in the cuty, 1920 Man plant in the game than over before, and though our players are mostly novices, yet with a little financial aid we shall consider our prospects very encouraging indeed. The President for the ensuing year is the Rev. E. R. Ward, and Mr. John I. D. Bristol, Vice-President.

GEORGE OXDENION, Secretary and Treasurer.

Rev, E. R. Ward, and Mr. John I. D. Bristol, Vice-President.
GEORGO CNROBLOW, Secretary and Treasurer.

DORLAN CRICKET CLUB.—April 8th.—The cricket prospects for the coming season at Haverford College are good. As each senior class leaves and takes with it some of the old stand-bys, it always seems as if the college would hardly be able to play against the strongest reams of the Philadelphia clubs, but as old members leave the college campus new ones are found to take their place, so the ancient standard of the Dorian Cricket Club is kept up. During the last season the first eleven played seven matches, of which it won four and lost three, namely, against:—Old Haverfordians, lost by ten wickets.
Chestnut filll, won by 18 runs.

Philadelphia, won by five wickets.
Merion, won by one innings and 10 runs,
Germantown, lost by 89 runs.

University of Pennsylvania, won by ten wickets.
The second cloven played three matches persys the following second elevens: Old Haverfordians, Belmont and Oxford, and won them all. Of the first cleven Newfirth and Mason led in the hattling averages, each securing an average of 12A. The former

won them all. Of the first cleven Newkirk and Mason led in the batting averages, each securing an average of 12.4. The former obtained 19 and 9 against the Philadelphia Cricket Club, 15 against the Young America Cricket Club and 20 against the Merion. Mason scored 71 against the Chestnut Hull, and 19 and 18 ts. Young America Cricket Club. Lowry and Crotic also did some good work for their team, the former proving himself to be a warmatherly before the some contractions. Materica Criekes Caus. Dowry and Corbit also did som work for their feam, the former proving himself to be valuable bowler. A.

PENINSULAR CRICKET CLUB, of Det oit .- The annual meeting

PENINSULAR CRICKET CLUB, of Det oit.—The annual meeting of this club was held on the 5th inst, when the following named officers were duly cleeted:—
President—Recurye E. Hand. Vice-President—R. B. Ridgley.
Treasurer—Thos. Calvert. Secretary—C. B. Calvert.
Managing Committee—C. C. Hinchman, Fred Bamford, Joseph
Taylov, F. Lable, Win. White, Thos. Morphy. Match Committee
—Ford D. G. Hinchman, Frank C. Livrice, Goo. Heighto.
Mr. Calvert writes: "We think cricket will 'boom' on our new
grounds of eighteen acres. The club—house, grand stand and furface all in fine order. These improvements cost about \$6,000 last

year.
"The club has over one hundred members, and has made arrangements with the Recreation Park Association for the use of the heautiful grounds and club-house for a term of years. A

of the heautiful grounds and club-house for a term of years. A number of Canadian teams will yist Detroit during the summer, and we trust elevens from New York and Philadelphia will give the Peninsulars friendly calls this season."

GALT CHICKET CLUE.—The annual meeting of the Galt Cricket Club, of Canada, was held on April 1st, when the following officers were elected for 1899: President, Lieut.—Col. Peck; Vice-Presidents, Messrs. R. S. Strong and W. A. Dickson; Secretary, Mr. George P. Simpson; Treasurer, Mr. J. S. Meredith. Match and Ground Committee: Messrs. T. Pock, G. P. Simpson, J. S. Meredith, F. Parkins, J. M. Fleming, W. V. Onslow, F. G. Hughes and Thomas J. Blain.

—Frod Norloy's 'Sprother' has arrived in New York, and hee-

-Fred Norloy's "brother" has arrived in New York, and has been engaged by the Manhattan Cricket Club.

—The Port Hope Cricket Club expects to be able to renew its case and continue to shine in the future as it has done in the nast.

St. CATHARINES CRICKET CLUB.—This club was organized for the season of 1890, on the 25th ult., when the following officers were elected: President, James A. Miller, Esq.; First Vice-Presiwere elected: President, James A. Miller, Esg., First Vice-Tesi-dent, John Rifordon, Esq.; Second Vice-President, W. Hamilton Merritt, Esq.; Secretary, C. H. Connor, Esq.: Trensurer, J. C. Eccles, Esq.: Field Captain, B. B. McConkey, Esq.: Executive Committee, Messrs. Hamilton, Towers, Taylor, McKay, Crombie, Ingersoll and Cumberland; Match Committee, Messrs. McConkey, or, Boswell and H. C. Eccles.

REVOLVING IN CRICKET.

NEW YORK, April 9th

Editor Forest and Stream :-

Editor Forest and Stream:—
May I claim sufficient space in your valuable paper to reply to
the communication in your issue of April 8th, signed "A Member of Many Clubs?" I destrict to do so sumply to enlighten the
writer of the communication in question in regard to the definition of the technical term "revolver." He seems to consider
every cricketer a revolver who is a member of two or more clubs.
I do not so interpretit. What I have always regarded as a "revolver" is a player who one day is found playing in one club
eleven in a match game, and another day is to be seen in another
eleven in a match game, and another day is to be seen in another
eleven in a match game, and another day is to be seen in another eleven in another club contest. The mere fact of a player belong eleven in another club contest. The meer car of a player encour-ing to half a dozen clubs, just to get practice in their club field work, is one thing; that of only playing in club matches as first eleven players, is quide another matter, in my opinion. Quoting the Marylebone Club as a sample of a revolving club is what the writer characterizes by the term "bosh"—that is, it is

is what the writer characterizes by the term "bosh"—that is, it is no argument at all, as every English circketer knows that that club is in every respect an exceptional organization, and one that always plays what may be called a picked eleven. The English papers for the past two or three years—notably the Field and Land and Water—have been exclaiming against the custom of baving revolvers in club clevens—that is, players who are never seen on the club ground except in match games, and then play in the A cleven one day, the B eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next, and the C eleven the next and the C eleven the next and the C eleven the next and the C eleven the next are of entablished to a leave which is unto by the content to the content of t posed "revolving" for is, that it is a system which is their questructive of emulation in a club, a system which destroys the club spirit, and which prevents young players from having opportunities to be raised from second clevens to first elevens. At any rate, that is how it has always worked in metropolitian clubs from the time that Sharp joined the old St. George Club while still in the time that Sharp joined the old St. George Club white still in the old New York eleven, up to the time that visiting clubs would find, after playing the St. George's eleven in one match, that three or four of the same eleven composed the then young Staten Island eleven. The writer I refer to says: "Look at Philadelphia with all her clubs." Well, look at Philadelphia, and what do you see? Simply the strongest club in the country, the Young America, flourishing as no other club does, on the anti-revolving

If the revolving principle is good for cricket it is equally go for base-ball, and where would base-ball be if it was run on the revolving principle? They tried it among the professional clubs rovolving principle? They tried it among the professional clubs here some years ago, and what was the result? New York his not had a professional team since. It is surprising to read such purrile arguments as the revolving people bring to bear in favor of their peculiar views. Indeed, it is searcely proper to apply the term "argument" to some of their talk. What I claim for one thing in this revolving business is, that the use of revolvers in club devens—that is, in availing yourselves of the services of a first-class St. George's man to play him in a Staten Island or other club elevens to help win the match—thereby keeping out of your own eleven some young appirant who desires an opportunity to distinguish himself—nevents all the credit a victory would other. distinguish himself-prevents all the credit a victory would otherwise yield, and dampens the arder of your young players greatly against the interests of the club.

Anti-Revolves.

Western broken dog; therefore, look for one in your vicinity, We mail to you the addresses of several parties to whom you may

H M . Colores, N. V -Do you know of any stain for fishing rods except aniline that will stain a dark red, or any other color that will look well? Ans. There are several stains. Try dragon's blood.

CHAS, G. S.—Would it be safe to rebore a 15 bore gun into a rarger gauge? Ans. That depends upon the thickness of the arrel. Take the gun to Win, R. Schaefer, 61 Elm street, Boston. larger gauge? Cost, about 87.

L. P., Son Francisco, Cal.-We never did the "IS, IA, I5" puzale, never knew of any one doing it and can give you no assistance. The transposition from horizontal rows into vertical columns is not a solution of it.

Ego, Worcester, Mass.—In a match at twenty balls, P being handleapped at 19 and Hat 18 yds, such get their handleap and ato ordered to shoot off atten bells each. Both get nine balls. Which wine? And Neither: it is a tie.

E. G. B., Vineland, N. J.-I have a good shooting gue, 12 bore, siths, 30m, which makes a good target at 50 yads with No. 7 or smaller shot. Can I load it with a larger size shot so that it will be a serviceable gun for duck shooting? Ans. Yes.

Boston, New York.-Have been informed that the wreck of the Boston, New York.—Have been informed matthe where we Black Warrior was a good place for fishing. Please give rat for finding the same? Ans. The wreck is in the Lower Bay; a good spot; but you must apply to some of the Ishermen for ranges.

W. E. A., Morris, Minn .- 1. What is the largest weight that has been put up at arm's length, one arm? 2. Also the heaviest weight lifted breast high? 3. When are pike in scuson? Ans. 1. 65 lbs. 2. 270 lbs. 3. In midsummer. Taken by trolling and by still fishing.

A. J. H. C.—To waterproof cunvas canoes, steep the canvas in the following solution: Hgals, water, Ilb, fluely powdered alum, and Zozs, finely powdered sugar, of lead. Steep for ten hours. Or simply paint and varnish the canvas. Put the paint on sparingly, a will add to the weight.

or you with add to the weight.

S. R. U.—Would advise a cruising cance for general use. For books, see "Baden Powell's Canoe Cruise in the Baltie;" "Canoeing in Kanuckia." Cance and flying prot. or for heavy stilling cances, see new edition of Dixon Kemp's "Yacht and Boat Sailing," just out. Can procure either for you.

G.L., Brooklyn, N. Y.—The revolving shot guus are no longer manufactured. They proved very dangerous weapons. It frr-quently happened that when the gur was fixed more than one of the charges went off at the same time, and those which did not go through the barrel went through the shooter's hand,

Though the barrer work through the shooter a main.

"Longshore.—We know of no formula for distributing the peak hallfard blocks. The strain will equalize itself on all parts in inverse proportion to the number of sheaves in use. To sweet up the peak easily, the masthead should be long, and the ment lead of the peak well out on the raft—about 6) per cent, from the laws.

Jaws.

S. H., New York City.—Your deer-hound is affilted with rhou matism. Rub the shoulder with a good stimulating liniment, such as is used for horses. Give internally a small teaspoorful of baking solad, dissolved in a little water, three times a day, Kennel the dog in a warm, dry place, and exercise at regular

times, W. W., Williamsport, Pa.—On page 125, March Is, IsSJ, you make mention of white deer killed in Virginia. Can you inform me where I would be likely to find a doe and one or two fawns, and the probable cost? I desire them for a park. Ans. It is not likely that you can obtain them at all; but it is possible that an advertisement might help you.

J. A. P., Atlantic City, N. J.-I have a fine setter dog about two gars od, he had the distance atoms from two parameters of another two paras od, he had the distance atoms, and it left him with a wheeling in his throat, which you can bear one hundred yards ways. Please inform mowhat to do for him? Ans. Such cases are rarely ever cured, it is akin to "coaring" in the horse; time and good care sometimes bring about, some improvement.

FORESIGHT, Brooklyn.-1. Will 5drs. strong powder be too much for a Tibs, muzzke-loading Parker? 2. Will a soyer, shell hold powder sufficient to throw a M call, story to hillet with force and precision up to 600 yards, and would it amswer for bearrand buffale. 3. How can I cast builtets free from flaws? Ans, h. Too leavy; use 4dr. 2, Yes. 3. Difficult. Heat your builet model hot when nouring in the lead.

O. B. M., Raleigh, N. C.-1. Tin coated shot are soft shot with a O. B. A., ratiegh, N. C.-1. The coarse shot are soft shot with a hardened surface made by plunging them into a hard of lin. Chilled shot are hardened by a secret process of the manufactures. Neither are injurious to guns. 2. To determine whether or not your gun is choked, it a wad and push it through the burrel. 3. A purpy's that should be docked when the animal is young. Two years and a half old is too late.

W. E. H.-I have just varnished a Calcutta cane rod with oan W. B. H.—I have just various or the first cane for with carriage variish, and I find that the surface feels griftly to the touch, and looks as though sand were under the variish. Ans, It is probable that fine particles of dust, floating about in the room where the work was done, became mixed into the variish. Great care must be taken to provide not only against pulpable dirt, also against the invisible particles of dust in the air.

W. B. R., Welland, Ont. -1 have a setter five years old, in good health, but has a great tendency to fatness. Can you point out a cure? Ans. Close confinement and injudgious and excessive feeding are among the causes of obesity. Give plenty or vizorous exercise, feed lut once a day, and avoid fattering food. Should the tendency increase in spite of these observances, a small dose of iodine may be given along with an occasional aperient.

apecient.

G. B., Columbus, O.—Out of a litter of seven setter puppirs, only two are living. They are five weeks old, and lime o been fed on milk about a week of which they end but little. They have no control of their legs and fall over very easily. Both are fat cough, but seem do liand do not play. The whole of the previous litter was affected in the same way and I hast them all. Ans. The pupples seem to be hally nourished. Why does not the mother nurse them? Good food and pure air ane your lost

G. C., Au Sable Forks, N. Y .- The principal cause for different G. C. All SHOP FORS, A. Z. "The pinnensh cause for different shades in flesh of brook trout is the variety of for a fruit by Henry. Fish in the same stream, even where different parts at the stream are diverse in character, may ofter a sufficient variety of food to cause such a variation in these coner. The Au Eublic, with its atternation of swamps, notely bottom, etc., is a roce in point. Other causes are difference of condition, approach of spawning

LONG ISLAND,-The claims of Long Island as a summer residence for New Yorkers have been again and again set forth in these columns; and we are pleased to note that these claims are beginning, year by year, to be more generally appreciated. One important evidence of this fact is found in the increased attention paid to the facilities of travel, particularly by the Long Island Rail-road, which, under the able management of Mr. Thomas R. Sharp, seconded by Mr. W. M. Laflin, General Passenger Agent, is fast acquiring both favor and confidence. The road-hed has recently been put into the most perfect order, and the comfort of the cars themselves vastly improved. Another sign of advancement is the constant mprovement in real estate carried on along the East and South shores; especially in the vicinity of Bay Shore, Oakdale, Sayville, Bellport, etc. At Oakdale and Sayville, we noted the other day, large wooded parks are being laid out, and many acres of land are now newly cultivated. This is right in the center of a trout country; within a circuit of five miles are no less than six streams; and then there is the Bay fishing for bluefish, Spanish mackerel, sheepshead, kingfish—and sharks, Ducks, geese and snipe are abundant, with rabbits and quail, if one knows just where to look for them.

-Records of successive long-distance pedestrian trials show the same advance in the character of the performance that has been exhibited in every branch of newly stimulated athletic exercise. In the match closed at Madison Square Garden, this city, last Saturday night, Frank Hart, one of the negro competi tors, scored for the six days 565 1-10 miles, being twelve miles more than the score of Blower Brown, made in London last February. Hart has at least demonstrated that in a long-distance race the black man may sometimes lead. The second man, Pegram, was also a representative from the Dark Continent, his score being 5433 miles. The other records were: Howard, 534 miles; Dobler, 530; Allen, 525; Krolme, 516; Williams, 509, and Hanwaker, 450.

Long-distance walks would appear to have lost none of their attraction for the New York population. The cash receipts are reported to have been \$27,030.

THE IRISH-AMERICAN MATCH.

T seems assured now that an American team will visit Ireland during the present season to renew once again that charming Irish-American match over the The Palma match, from all appearances, longranges. must lapse for yet another year, with very good chances of its resumption in 1881, as according to the letter received by Col. Bodine within the past three days from Sir Henry Halford, the opinion is conveyed that there is but the slightest probability of a match in 1880, and in the same letter the English rifle leader says he will set about securing the team of 1881 at once. For the present, then, the National Rifle Association has the single task of getting together six men, with the necessary reserve, who are willing to go over to Ireland, undergo the temptations of Irish hospitality before the match, shoot there with the eyes of all America upon them, and come back with a good account of themselves. The men can be secured, and if the right men are chosen the result is assured. It does not appear that the Irish riflemen have either forgotten anything or learned anything, and woe betide the American team who should now permit any break to come in the series of American victories with the rifle. With our rifles, beyond argument the best now made, and a team system which should equal if not excel that shown in previous years, there should be no sort of doubt of the result as against the each-man-forhimself style of the Irish team and their muzzle-loaders beautiful samples of workmanship though they may be, With, then, the result so well assured, if the men from the United States be properly presented on the Irish range, the work now is to select and equip the team.

There is a ring of fairness in the open-competitionstyle of sorting the men which is very popular and very problemetical. Theoretically it should produce the best men, but this survival of the fittest does not always follow here, however it may do in other spheres of action. Flukes are constantly occurring, and one which may send a poor man to the front in a competitive selection would bind the committee to him if they took the risk of selection by a certain round of scores only. This may produce the best men and it may not. When all the men are untried and it becomes a groping among a lot of unknowns, then this plan is as good as any, but we here have passed that stage. We couldname a dozen men, offhand, who could be molded into a team which would beat a foreign team with the certainty of fifty to one Our columns each week spread to the world the doings of our riflemen, and a man is good for his average either in or out of a match. When a marksman swings along at 200 and over, and can, in a series of contests, average well up in the teens, he is a safe man to put on a team, surely, against one who can, according to his own statement, run up a score of 224, and then, when brought into an immediate prospect of a trial of his merit in open competition, turns tail and runs off.

The steady shooter is worth more than the skyrocket shot in a match of moment, and a strong team pulling together is almost sure to vanquish a company of meteors and sticks. With this principle in view, the selection of the American team seems to take the character of a partial competition and a partial selection, and there are no better ones to make the selection than the men who have won for themselves places on the team already. It is not to be supposed that they will take team fellows who are not fit in their opinion to bear their share of the contest. In former years the mixed plan was tried with good success, and with the limited time for the gathering together of the team at this time it would seem specially desirable that some such plan should be adopted in this case.

Another part of the work of the committee having in hand is the provision of a sum of money the matter sufficient to carry the team to Ireland and return. The sum total for this work is not a large one, and the committee of the Association should find no difficulty in raising that sum. The plan proposed of having each man pay his own expenses, or even of looking to the club or section from which he comes to take charge of his financial backing, is a false one, and sure to produce discord and break up that unanimity which is essential to a perfect team system. The men should go out from these shores as the representatives of the nation, and it is the duty of the National Rifle Association to see to it that they go out properly organized, with a measure of accountability to that Association. The opportunities should be given, if need be, to every American citizen to assist in sending this team to Ireland. It is a plan which may be kept up year after year, and it will be a bad precedent to have a team of independent gentlemen going over simultaneously and whose only bond of union is a similar desire to win the match. They should be recognized abroad as direct agents of the United States, or from its people, sent there by its people and on their behalf, and this can be done most thoroughly by placing the financial conduct of the team in the hands of its captain, and in that way giving him the complete control necessary, if he is to be held fully accountable

itself free when called upon at all times to criticise fully and sharply what may appear to be amiss in the aims and work of the committee.

NIAGARA AS A NATIONAL PARK .-- For the benefit of the individual tourist, as well as for the credit of the two Governments concerned, it is to be hoped that the scheme of rescuing the Niagara Falls from the pitiable condition of their present surroundings, may be put through, until we shall see the river and the Falls as they were before the era of mills and board-fence obstructions and patent medicine desecrations. This plan was first broached by Lord Dufferin, when Governor-General of Canada, and was approved by Gov. Robinson, who brought the project before the attention of the New York Legislature. The Commissioners of the State Survey, to whom the task was intrusted, have just made their report, which recommends that the State of New York and the Dominion of Canada respectively acquire possession of the banks of the river above and below the Falls, clear them of their present obstructions, and so restore them that the observer shall see nothing but the water, the sky, the earth and the vegetation. That means to abolish paper mills and disgraceful buildings on Bath Island, and the long-standing eye-sores on either side of the Among the names which are appended to the stream. memorial on this subject are those of Ruskin, Carlyle, Lonfellow, Emerson, Lowell, Parkman, Sir John Lubbock, Lord Houghton, Max Müller, Alexander Agassiz, Horatio Seymour, Thurlow Weed, Charles Francis Adams, and a powerful array of the chief dignitaries of America and England.

We have the Yellowstone and the Yosemite insured to ourselves and to our children's children; with the Niagara Falls likewise set apart, America would possess a trio of the most magnifient parks in the world.

"GOOD IN EVERYTHING."-So seemingly an unpoetic thing as the sting of an insect was long ago utilized by the poets in the Greek story of Io, metamorphosed through the jealous wrath of Juno into a heifer, and driven hither and thither in frenzied flight over the earth, pursued and tormented by the unrelenting onsets of a gad-fly. And now it appears that even the maligned and universally execrated black fly may yet hold a dignified place, if not in the tales of the poets, at least in the philosophical systems of the day. Discussing the origin development of barbaric customs, in his new book, "Ceremonial Institutions," Mr. Herbert Spencer comes to the discussion of the question why savage races paint their bodies and faces; and he accounts for the practice as follows :-

"In tropical countries the irritation produced by flies is a chief misery in life; and sundry habits, which in our eyes are repulsive, result from endeavors to mitigate this misery. In the absence of anything better, the lower races of mankind cover their bodies with films of dirt as shields against these insect enemies. Hence, apparently, one motive for painting the skin. Juarros says: 'The barbarians, or unreclaimed Indians of Guatemala . . always paint themselves black, rather for the purpose of defense against mosquitoes than for ornament,' And then we get an indication that where the pigment used, being decorative and costly, is indicative of wealth, the abundant use of it becomes honorable."

According to the time-honored story of the schoolbooks, Sir Isaac Newton was led by observing the fall of an apple to investigate the law of gravitation. It may not be hazardous to suggest that Mr. Spencer wrote this passage in his discussion of sociology after an afternoon's battling with the pests of the trout stream. However that may be, the Adirondack angler, who tinds tar and oil unavailing, may forget the sting of the fly in the consolation afforded by philosophical speculations upon that insect's proper place in the development of the race,

WOODCOCK OUT OF SEASON.-There is much indignation in Hartford, Conn., at the flagrant violation of the game laws of Connecticut, and the defiance of public opinion in the matter as exhibited by some of the members of the leading social club in the city, the Hartford Club. Report has it that some twenty-two woodcock were sold to and bought by Sherman & Cook, of Hartford; that a part of these were bought and served at the Hartford Club, and others were used at private tables. proof is said to be ample. This is about as wicked and senseless a violation of law and decency as can be in such a matter. The shooting of woodcock on the spring-flight, preparatory to nesting, is a new and outrageous proceeding, anyway; and the eating of the birds at a season when they are absolutely unfit for food, heavy with eggs (as some of these birds were said to be), or devoid of fat, due to the nesting season, is an offense against the table as great in the view of an epicure as was the violation of law in the killing or purchase of the birds.

If there is now opened a warfare on these birds on their passage north, as well as the illegal killing in the summer, to be followed by the more legitimate but sefor a good record of the trip. The FOREST AND STREAM vere depletion in the fall, then good-bye to these birds will do what it can to help on the work, but will feel This whole thing is an outrage on law, decency and appe vere depletion in the fall, then good-bye to these birds! tite. Bah? Let the Hartford papers ventilate the matter; and if there are any game clubs in Connecticut, or any prosecuting officers, whose duty it is to attend to such matters, let the punishment be meted out to all concerned, no matter what may be the social standing of the parties. Shame, that ought to follow exposure, would to any decent person be punishment enough, if not obliged to pay heavily besides. And any careful club would expel any member who used the organization in violating the laws or in tempting others to do it by pur-

There used to be a very strong and effective game club in Hartford. If it now exists it had best make itself felt; and if disbanded, let it be brought to life again. lieve it would have the support of every club in the country, and every fair-minded man, in pushing this matter uncompromisingly.

FISH AS FOOD .- Prof. Atwater's paper, published in our Fish Culture columns to-day, will be found instructive reading for all who are concerned in providing for themselves and others a nutritive diet. It is well worth careful study, for it is the result of a painstaking scientific investigation, and the results obtained are of the highest importance.

When the writer says that fish food is not, as is generally supposed, especially productive of brains, he strikes at the heart of long cherished belief. But there is hardly any subject concerning which there is so much current misconception as the different qualities of various arti-When the doctors and the scientific experts disagree on these points, it is as well for the layman to eat what is put before him, without regard to anything save the gratification of his own individual palate,

PONKAPOG .- Ponkapog, the home of Thomas Bailey Aldrich. is a little village, which, although only twelve miles from Boston, has been almost unknown to outsiders, save to a few anglers and gunners who yearly re sort to its excellent fishing and shooting grounds. The queer name is of Indian origin, and signifies "Sweet Water; "besides the name there are many momentoes of the Red Men in the form of arrow-heads, sinkers for fishing, and other relics. There is a plenty of fish in the streams, and of game in the woods and fields; and Mr. Aldrich often goes out for a day of genuine, hearty sport,

Assumed Names .- "Nick" has roused out of a long retirement, and with the revival of his favorite long-range work finds something to say apropos of false names on scoring blanks. The FOREST AND STREAM can utter a hearty amen to all of his conclusions. Bogus names are distasteful at all times and in every pursuit. They are entirely unnecessary on the range, and the argument of those who want practice, that they must perforce shoot in matches of public record, is simply ridiculous, and they presume very much in expecting that the press should become participants in their deceit.

Dog Show Catalogues.—We wish a catalogue of each of the American bench shows. If any one of our correspondents, who may have duplicates, can furnish us with the same, the favor will be appreciated.

EXCELLENT PUBLICATIONS .- We are constantly being asked what are the most comprehensive works on the dog, the rearing, breaking, working, feeding, exercise, judging and diseases. In answer we can now refer our readers to Messrs. Cassell, Petter, Galpin & Co.'s publication, noticed in another column,

-A potato from "Piseco, "of which more anon,

GAME PROTECTION.

ONONDAGA COUNTY SPORTSMEN'S CLUB, -Syracuse, N. April 7th.—A meeting of the Onondaga County ortsmen's Club was held last evening at their rooms in Kinber Block. The following officers were elected esident, John Bedford; Vice-President, D. W. Peck. Sportsmen's Club was held last evening at their rooms in the Kimber Block. The following officers were elected President, John Bedford; Vice-President, D. W. Peck Secretary, John Stedman; Finacial Secretary, Edwin Lodder; Treasurer, Thomas Kimber, Jr.; Executive Committee, Geo. Lodder, G. C. Luther and H. Ayling. Mr. Bedford and Mr. Stedman have been members of the club since its organization, some fifteen years ago, and Mr. Stedman has always filled the office of Secretary.

FOREST AND STREAM ASSOCIATION .- Danbury, FOREST AND STREAM ASSOCIATION,—Danbury, Conn., April 2d.—We have recently organized a fish and game club under the above familiar name. It will be our aim to have the laws relating to fish and game enforced, and we shall also look to the stocking of our ponds and fields. The officers are: President, A. P. Sturges; Vice-President, Andrew Hull; Secretary, T. G. Wildman; Treasurer, Geo. B. Benjamin, Jr. The members of the Forest and Stream Publishing Company have been elected honorary members of our club.

A. P. S.

—The Delaware Game Association sent a number of California quail down the State last week. German quail will be distributed also.

—A number of woodcock have been killed on Second Mountain, back of Orange, N. J., within the past few weeks. The Orange sportsmen should up and at the lawbreakers.

Game Bag and Gun.

GAME IN SEASON IN APRIL

Wild Ducks, Geese, Brant, etc.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Pish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and Its Season; Fish and its Season: Boats, Guides, etc.: Name of person to address.

-The following epitaph is to be found in the churchyard of Woodbridge, Suffolk, England. The spelling would indicate that the stone must now be crumbling and covered with the stains and moss of many years, but the warning is by no means antiquated :-

y no means antiquated:—
Here Lieth the Body of
BENNAMIN BRINKLEY
Who Though Lustic and
Strong was one.
Strong was one.

NEW HAMPSHIRE-Colebrook, April 6th.-Spring is NEW HAMPSHIRE—Colcorook, April 6th.—Spring is here, and the winter has been a favorable one for game; very light snow-fall. A few deer have been killed near Diamoud Pond, ten miles from here, but in the Connecticut Lake region I fail to learn of a single moose or deer having been taken contrary to law. Very few instances of fishing through the ice. Cariboo are seen frequently of fishing through the ice. Cariboo are seen acquired of late on the lakes sunning themselves. The ruffed grouse have not been winter killed. Forty million feet of spruce will be floated toward the sound as soon as the ice is out of the river.

EDW. NORTON.

ice is out of the inver.

Manchester R. Sido 7ilso Club.—Manchester, N. H.,
April 10th.—The annual meeting of the Manchester
Shooting Club was held at the Haseltine House, 6th inst,
and was very fully attended. The report of the Treasurer
showed the club to be in a good condition financially,
there being quite a sum in the treasury. The following
officers were elected for the ensuing year: President,
Leuj. F. Clark; Vico-President Geo. F. Elliott: Secrethere being quite a sum in the treasury.

officers were elected for the ensuing year: President,

Benj, F. Clark; Vico-President, Geo. F. Elliott; Secretary, Julius E. Wilson; Treasurer, Chas. L. Harmon;

Executive Committee, Ira A. Moore, Chas. J. Darrah

and Moses Wadleigh. Thirteen new members were

elected, making the total membership sixty-four. The

club was organized for the purpose of holding glass-ball

and pigeon shoots (pigeon shooting not allowed in New

Hampshire at present time), that its members might ac
quire proficiency in wing shooting—the matter of game

protection, fish propagation, etc., being well looked after

by the New Hampshire Game and Fish League, an or
maintain devoted wholly to the above named objects. by the New Hampshire Game and Fish League, an or-ganization devoted wholly to the above named objects. The Shooting Club raised a sufficient sum of money last The Shooting Chib raised a sufficient sum of money last winter by contributions to send an order for 300 migratory quail, which will be liberated in this vicinity, and the club will endeavor to protect them. The grounds formerly occupied by the Manchester Base-Ball Association have been secured, which will afford members of the club a place for practice within easy access.

J. E. W.

CONNECTICUT—Hartford, April 10th.—A friend and myself shot three snipe yesterday (April 9th) within the city limits. 1 have found by long experience that the first snipe generally reach here on the 8th of April. W. M. H.

NEW YORK—Hayt's Corner. April 4.—Wild ducks have been more plentiful here on the west side of Cayuga Lake than usual for the past two or three weeks, so I am informed, though I have not been out shooting. I think a few days' good shooting could be obtained near Cayuga, six miles south of the New York Central road, by stopping off at the bridge, or Bridgeport. There have been a number of geese seen going north, and some have been killed in this county, while they stopped to feed on wheat.

killed in this county, while they stopped to feed on wheat. FAR ROCKAWAY GUN CLUB.—A meeting of the Far Rockaway Gun Club was held at Delmonico's on Monday evening, April 2d. The following officers were elected for the ensuing year: President, George S. Greene, Jr.; Treasurer, Ernest C. Lamontagne; Secretary, Chas. A. Lummis; Governing Committee—Geo. S. Greene, Jr.; Ernest C. Lamontagne, Chas. A. Lummis, John D. Cheeren, Newbold T. Lawvence. New grounds have been engaged at Lawrence, L. I., and a club-house and other conveniences are to be crected immediately.

reniences are to be crected immediately.

THE STATE CONVENTION.—Seneca Fulls, N. Y., April 9th.—The Seneca Gun Club, of Seneca Fulls, N. Y., under whose auspices the State Sportsmen's Convention is to be held, met at a regular meeting April 7th. Seven new members were elected, and names of five others presented. The club is in a prosperous condition, and the managers are actively engaged with matters pertaining to the Convention. The Bird Committee are in correspondence with different parties in regard to pigeons, but in my judgment the contract will be given to either Phillips, of Detroit, or Stagg, of Chicago, both reliable dealers, who would furnish good birds. The matter will be settled probably in a few days. The Prize Committee have been both active and successful, and when the programme is published I shall be mistaken if the sportsmen of New York State do not pronounce it the best prize-list ever offered at a convention. The Parker Brothers, with gramme is published 1 suan to the best prize-list of New York State do not pronounce it the best prize-list over offered at a convention. The Parker Brothers, with their accustomed generosity and energy, have already forwarded their prize gun. Parties who have examined it pronounce it a superior gun to any before given the Association. The finish is superb, and good judges say it is a perfect gem. Other prizes will arrive about May 1st, and be placed on exhibition. The Committee on Grounds have not as yet positively decided upon location, but one will be secured which will be desirable and convenient. Every thing promises an early meeting of the Convention.

AN UNIQUE VISITOR.—Brooklyn, N. Y., April 2d.—his morning about 7 o'clock my daughter Nellie opened ne basement door to take our daily supply of milk. As

she did so she jumped back in some excitement and called "Papa, come and look at this thing!" I passed quickly into the room from the kitchen, and there, under the theorem the careful a benuiful male woodcook. I "Papa, come and look at this thing!" I passed quickly into the room from the kitchen, and there, under the sewing-machine, squatted a beautiful male woodcock. I essayed to catch him, but he darted past me into the kitchen, with his tail spread out like a fan, past the eat, who was very nuch surprised; and as soon as he saw the window filled with the house plants he took to wing and flew with great force against the glass. He was momentarily stunned. I picked him up and found he was slightly injured in the left wing, probably by striking against a telegraph wire or similar obstruction while on his midnight flight to his breeding grounds on the island. He is a beautiful specimen of last year's brood, and I determined to have him stuffed. I once saw one alight on the chains that support the smoke-stack of a ferry-boat when entering the Fulton Ferry slip, New York side, and have heard of one paying a visit to a city yard up town, but never heard of one seeking shelter in a dwelling-house.

New Jersey-Ocean Countu. April 9th.—Shipe yery.

New Jersex—Ocean County, April 9th.—Snipe very scarce.
The best bag I have heard of to one man was seven. Meather too cold for them. Lee formed last. Ducks plenty in the broad bay, but do not stool well. I have seen large flocks of carvas-backs this week moving north. Woodcock have come in large numbers, and are preparing to breed. Quail are plentiful, owing to the mild winter. Good shooting may be expected next fall.

expected next fall.

KENTON COUNTY CLUB.—Cincinnati, April 2d.—The Kenton County Shooting and Fishing Club, of Covington, Ky., met last night at Auditor Orr's office, where the organization was completed, and the following prominent gentlemen were elected officers for the ensuing year: President, A. D. McPherson; Vice-President, J. A. P. Glose; Secretary, E. S. Studard; Treasurer, J. S. Sandford; Directors: J. D. Hudson, George Perkins and John Leathers. The club, which has been incorprated by the Kentucky Legislature, has nincteen charter members. The general purposes of the club art to grove the game laws of that State, and to promote the favorite pursuits of its members. It is the intention to prurchase a house and grounds near the Latonia Springs and Greenwood Lake. They will also be near grounds where their shooting tournaments will take place.

Tennessee Quail Potting .- Cincinnati, March 31st. TENNESSEE QUALL POTTING.—Cincunati, March 31st.—The following article I clip from the Commercial of March 29th, and send for you to judge whether the birds were shot legitimately or not. I certainly consider the article of no credit to the shooter, and also believe most of the 1,800 were potted. Here it is, dated March 25th, 1880.

1880:—
"Mr. David Holt, of this vicinity, from September 1st, 1878, to March 31st, 1879, killed 1,800 partridges. He killed fifty-four in five shots; killed eight on the wing at one shot. Of 321 shots he felled 311. He rarely misses a shot. A gentleman who thought he was a crack shot went out to shoot against Holt one day. Two birds flew up and Holt knocked them both down before the other fellow got ready to shoot. He did all the shooting with a small 36in, muzzle-loader. How is that for high?"
And I, myself, add the same exclamation. W. E. S.

The five shots, averaging 10 4-5 birds to a shot, were very fair-as ground covey shooting goes. Other men shooting in the same way have excelled it; however, it is difficult to give statistics, because the persons who do this kind of shooting do not often tell of it in print. The "eight on the wing at one shot" part of it is a figment of the imagination of a man who never saw a bird in the

of the imagnation of a man who never saw a bird in the field.

Spring in Florida.—Titusville, Fla., March 25th.—Just returned from a trip to Banana River, the great game resort of this region. Found raft ducks, or blue-bills, very numerous, but wild. Those that we shot we found to be poor. Found also a good lot of black ducks, here called English ducks (Anas obscard), and shovelers, or spoon-bills (Spatula clippeata), in the marshes. The widgeons and pintails seem mostly to have left this locality on their northern migration. The Florida gallimites, here called coots, are very numerous, swimming in immense solid phalanxes, often several hundred yards longight or ten feet wide, and so close together that thy touch each other. A sailboat can generally sail within twenty or thirty yards before they start to fly, and generally analy to be distinguished from rabbit. The great white pelicans seemed to have all gone north, but in their place was an immense army of shore birds, godwits, stills, killdeer, peeps, etc.

The numerous varieties of heron which swarm on these marshes are now beginning to nest, and are in full plumago. The crackof the plume hunter's gun is heard in all directions; the white heron plumes bring from 20 to 30 cents apiece, and several hundred can be secured in a few days at the rookeries, which, by the way, at always in the wildest and most inaccessible places, are always in the wildest and most inaccessible places.

We found no deer, although a few weeks ago they were numerous. This is owing to the fact that the does are lying concealed in the hickets with their young fawns. The bears are now partoling the river shore nights for horse-sinc crabs. In a few weeks they will walk the ocean beach for turtle eggs, and then their capture is comparatively easy.

Louisiana—New Orleans, April 11th.—Messrs, O. P. Glessner and fit. Hall Tragge, of this city, were in York effective and the search of the fact in the tip of the feet search and it. Hall Tragge, of this city, were in York effective and the searc SPRING IN FLORIDA. - Titusville, Fla., March 25th. - Just

ture is comparatively easy.

LOUISIANA—New Orleans, April 11th.—Messrs. O. P., Glessner and fl. Hall Treager, of this city, were in York County last week on a snipe-shooting expedition. They were joined by Mr. Albertus Hiner, of that county, and Sergeant Adam Elsesser, the prospective candidate for Representative. The weather was cool, will a very strong northerly wind blowing, which, together with the erratic flight of this species of game, put their shooting abilities to the test. They succeeded in bagging thirty-five birds, which were in "fine order." They report having seen several coveys of participes and numerous scattered birds, which promises plenty of this game next fall.

ARKANSAS—Memphis, Tenn., April 9th.—There have been some good bags of snipe made on the Arkansas prairies. I intend having a turn next week, but it is getting rather late, EDMUND ORGILL.

Оню-Port Washington, April 9th.-I shot a crane

yesterday that measured six feet and two inches from tip to tip of wings, and was four feet and eight inches from toes to point of bill. It is now in the hands of a taxidermist. Ducks are very scarce here. I killed five blue-winged teal last Tuesday. There are lots of quall here, left over from tho winter. The river (Tuescarawas) has been too high and discolored for fishing. I am told there are lots of sulmon in the river besides black bass and perch. As soon as the water is in order I intend to try for the salmon, and will let you know what success I have.

R. O. Y.

OREGON.-Portland, March 20th.-Had a splendid day Oregon.—Portland, March 20th.—Had a splendid day's sport on the 14th with the ducks, the more so because of its mexpectedness. Went to the Columbia bottoms, about eight miles distant, in company with three friends. Result: J. R., 7 ducks; L., 5; B., 2, and your correspondent, 18, making a total of 32, mostly pintails and widgeons. I have hung my gun up for this season, and am now looking over fly-books, lines, rods, etc., preparatory to a descent upon the linny denizons of the brook, and then you will again hear of P. S.—A party of six returned from a shoot last week with six dozen canvas-backs.

Wolf Fluxt—Boston. April 2d.—Bremer County, Ia.

WOLF HUNT.—Boston, April 2d.—Bremer County, Ia., must afford rare sport, according to the account of a recent wolf hunt in Summer, a township in that county. John Bracken, with his pack of hounds, ran down eleven wolves, large and small.

A DUCK "BLIND,"—Vail, March 29th.—Have just returned from the Missaud Bling hotton, miss work.

wolves, large and small."

A DUCK "BLIND."—I'all, March 29th.—Have just returned from the Missouri. River bottom, where we (five of us) have been having a glorious duck hunt. We found ducks quite plentiful, although very wild, which added to the value of those we did kill. Earlier in the month some of the boys tried a new dodge on the ducks: they would place decoys on the ice while it was snowing, wrapping themselves in a white sheet, which made a perfect blind, and succeeded in killing a great many, t. c., something over one hundred for one man in two hours.

E. B. B.

ANOTHER MAN WHO LIKES THEM.—In this vicinity, since game has become so scarce and willy, there has been a great need felt for some device to concentrate shot for long distances. Our choke bores are good, and the dear old cylindrical must give way and make room for this modern improvement. Yet, even with this fin-provement, how often have we seen the need of something by which to bring to bag this or that particularly desirable game, which has hitherto flown, leaped, or swam so safely, yet provokingly near. But now comes that, which, in the writer's humble opinion, will totally eclipse everything of the kind yet invented—the thread-nowledge, and with two or three of these in the pocket, as one has his day's "outling" he may be reasonably sure of, a part of this high-flying and wild running game. Our Western and Southern friends, who reside where game is so plenty that they can easily fill their bags with loose shot, may be made to do good execution at 120 yards, or more. But I think most sportsmen will join me, and hail with delight this very important improvement for long-range shooting. G. W. E. North Andover, Mass. ment for long-range shooting. North Andover, Mass.

A GUN NOT EASILY STOLEN.

A GUN NOT EASILY STOLEN.

THE late recovery in Buffalo of a Fox gun, which had been stolen from the rooms of a well-known sportsman of that city, offers a few interesting and instructive comments which may present themselves in clear light to the many who happen to use this excellent gun in preference to all others. It appeared by the police court investigation that a couple of young boys, of fourteen and seventeen years respectively, entered the room where the gun was kept, and tempted by the neat aspect of it made a profitable investment of their time by appropriating it without any further ceremony for their own use.

One difficulty, however, presented itself, to wit: the successful transportation of the venture down stairs, as the room where it was kept was the topmost of a fourstory building. To accomplish this without any danger of detection it was therefore deemed advisable to detach stock and barrels and convey them separately, well hidden under the sheltering folds of their overcoats, to some place of further safe keeping. This would have been an easy task in case of any ordinary breech-loader, but the Fox gun, by its peculiar mechanism, presents some difficulties which are not well overcome by any one who is provided to detach the barrels, which are not well overcome by any one who is provided to detach the barrels, which can be instantly disengaged by pressure of a little countersunk knoh ingeniously adjusted to meet this requirement. Main strong in strength and the strength of the detach the barrels, which can be instantly disengaged by pressure of a little countersunk knoh ingeniously adjusted to meet this requirement. Main strong in strength and the strength of the detectives, who had a comparatively easy task before them in view of the fact humburship placed in the hands of presson of make tond the pressing demands upon short time and obviate the pressing demands upon short time and towards to the fear of possible discovery. The barrels, now widely pushed sideways, were thus placed across the kne

proper quid pro quo, some detectives, not far off, were quickly summoned, and by their belo the whole

proper quid pro quo, some detectives, not far off, were quickly summoned, and by their help the whole programme was materially changed. The gun, though seriously damaged, was promptly restored, and the House of Correction assigned as a residence of indefinite time to the chief perpetrator of the robbery.

If an accident of that kind had happened to an imported gun the repairing of it would probably run up to a sung little bill. The benefit accruing to the owner of a home manufactured gun, above those made abroad, becomes in this instance manifest, as, by reason of quickly adjusted machine-made duplicates, the slow process of costly hand labor is obviated. While often many dollars are needed to replace any important demolished portions of a foreign-made gun, over and above the long time required to do it, here a couple of hours are sufficient to complete the whole job at an almost nominal expense.

expense.

All things even, shooting qualities and excellence of finsh, it would appear that in case of accidents, violent or otherwise, the owner of a home-made gun has thus certain advantages which distance to the seat of workmanship in the other case does not well afford

SHOOTING MATCHES.

New Hampshire.—Manchester, April 8th (Fast Lay).—The first glass ball shoot of the Manchester Shooting Club for the season was held on the club grounds in 'Squog, this r.m. It was a cold day, with a strong northwest wind blowing across the range; consequently scores averaged poor. Card revolving trap; 18 yards rise; 10 balls each score:—

MASSACHUSETTS-Worcester, April 10th.-The following officers were elected for the ensuing year at the annual meeting of the Sportsman's Club last month: President, A. P. Pond; First Vice-Sportsman's Club last month: President, A. P. Pond; First Vice-President E. T. Smith; Secretary, Stedman Clark; Treasurer, G. J. Rugg; Directors, A. Houghton, Jr., C. B. Holden, John B. Goodell, and M. D. Gillman. Fast Day, April 8th, was very generally observed by the shooting fraternity in this city and environs by glass ball shooting on the grounds of both clubs. The occasion probably brought rogether more shooters than were ever before gathered in this city for glass ball shooting, and considering swift traps and a decidedly cold day, very creditable secres were made. The day's shooting opened with a friendly match of twenty balls (ten thrown from Holden's gonger trap, and five pairs thrown from stationary trap. opened with a friendly induced twenty oaks (left drone from Holden's rotary trap, and five pairs thrown from stationary traps 18 yards rise, between teams of ten face each, selected from the Mariboro Sportsman's Glub, of Mariboro, Mass, and the Sports-man's Club of this city, which was won by the Mariboro team, as shown by the score:

The Rifle.

"NICK" ON FALSE NAMES.

THE bogus name boxic has once more unde its appearance in the midst of the directors of the National Rifle Association, and strange to say, the first movement of "Old Reliable," John Bodine, in his new seat as a director was to secure the passage of a resolution by which he may be "unreliable". John Smith. The children of older growth in the Board do not appreciate the old motto that a burnt child dreads the fire. Does not the Board recall how at one time a similar resolution was passed, and how flatly and squarely the Journalists (whose duty it is to let the world know what it wants to know about Creedmoor and the doings there) sat down on the plan and refused to be participants in any such misrepresentation? It is selear, simple fraud or worse, and has its entire purpose and excuse in a desire to deceive. If A is a member of a corporation which pays for and has a claim upon his services for certain hours of certain days of the week, he cannot expect to have the National Rifle Association, the staff at Creedmoor and the press, both daily and weekly, to enter into a conspirery with him to defraud that corporation by hiding the fact that A spends his time at Creedmoor while he tries to convey the impression that it is spent in the service of the hiring body. It is the same when a business or professional man sets out to draw the wool over the cycs of a company of his clients. If the office boy is instructed to say that Lawyer Subde is on that very afternoon arguing a case before the Contr of Appeals at Albany, he may do so without any infraction of the office code of morals, though he saw Lawyer 8, start not an bour before for an aftornoon before the Dutits; but it is rather unreasonable to suppose that the life is to be carried out as far as its originator would wish, and the columns of papers to which we look for the record THE borns name bogic has once more made its appearance in se that the lie is to be carried out as far as its originator would pose that the lie is to be carried out as far as its originator would wish, and the columns of papers to which we look for the record of the shooting would be burdened even more than at present with bogue sentries. Another man who has an honest pide in his abilities as a marksman and passionately loves the lavigorating competitions at long range, may necept a public office where for a consideration be offers to perform certain service. He may be a court officer with merely perfunctory duties, yet they are regarded as of value, and it is an infraction of that agreement to assume other duties and participate in other cargus; mosts earliers to the control of th assume other duties and participate in other engagements entirely at variance with them. If there is no fraud intended, no inteution to seek a shield from some consequences unpleasant of

unwished for then why the hiding under a nomile fusily The intention to misrepresent may been in a thousand directions, of which the writer has no fleat but the few cases clied no doubt will serve to indicate how those who wish to evade the plain responsibility for their doings find motive for it.

responsibility for their doings find motive for it.

It can hardly be that there is a desire to slip out of the notoriety
which the newspapers give the shooters, through any idea that
rifle shooting is not quite "the thing," but the parallels drawn in
the Board when the resolutions were adopted would lead to the
impression that something of the sort was entertained.

There may be a delicacy on the part of some who are exper-There may be a delicacy on the part of some who are expert wing shots against shooting birds from arran, howeverill-founded it may be, and the whole body of pigeon shots and the sport itself has been brought into a sort of disrepute partly on account of the practices indulged in at private matches, and in good of the practices indulted in at private matches, and in good measure by the custom, long past the initiative stage, of using false names at trap shoots. It is prima face proof in any business transaction that when a fulse name is given, some fraud is intended, or is to be covered up. Turn and twist it as they may, the rifle shooters who wish to crawl to the range under a fulse name are put on the defensive, and the best justification they can offer is the very poor one that they are seeking a good end by bad means. It is undignified and it is ungentlemanty, akin to the aliases of the police court and the criminal classes. A man who seeks to high his filentity needs to be watched. He may not be a pickpocket, and a train to Creedmoor is not u convoy of felous simuly because the men are not whom they nected to be: but

picknocket, and a train to Creedmoor is not a convoy of felous simply because the men are not whom they pretend to be; but somebody somewhere is to be misled by the subterfuge of a false name, and the rilleman who assumes it knows precisely where he is to profit by the deception.

Nor does the mischief stop here. The N.R. A, sets rules for secres and hundreds of associations throughout the country. Some of these have the bogus name allowance, and Walnut Hill stains an otherwise fair fame by this transparent blot, but on the unfority of the ranges the shooting is fair, open and acknowledged. This resolution permits the record to be deluged with the doines of nominal unrealities, of phart assmal frauds. When the eggen. In resultation permits of phenomenal frauds. When the chickens come home to roost, earth the chickens come home to roost, earth when the members of the N.R.A. will feel ashamed of their progeny.

The ground may a specific be taken the sales, if rifle shooting it to be grounding and as a sport for gentlemen, and is to extend its

Is to be maintained as a sport for gentlemen, and is to extend its operations, that everything shall be open and above board. The first rifleman of this country certainly, and perhaps of the world, has never had occasion to slink under cover, as proposed and permitted by this resolution. When his score was bad he was despondent at his fill luck, and hopeful for the next shot. When the score was finche was justly exultant, but like his namesake. "Old Hickory," he has been, first, last and all the time, true to himself. In the New York body there is a little too much steering within the letter of the law while breaking its spirit, and if the present attempt to revive the old plan of sulterfuge shooting shall ancert, then I mistake very strongly the spirit of the New shall operate, then I mistake very strongly the spirit of the New York press. Hook there for an independence in the matter, and it lake names are given to the world as records I shall begin to think that the young men who "tak'notes" are willfully or carelessly blind.

The PALMA CONDITIONS.—The conditions for the Palma trophy as amended by the special committee appointed for the purpose, and adopted by the Board of Directors N. R. Δ_n were read as follows:

lows:—
Title—International Long-Range Match; for the championship
of the world; open to riflomen of all countries. Teams—Each
team shall consist of eight men; members of the various teams
participating must be native-born citizens and residents of the narticipating must be native-born citizens and residents of the countries they respectively represent, except in the case of teams representing a provincial territory of a government, in which case a residence in the province will be sufficient, provided the member is a native-born subject of the parent country. Rides—Any not exceeding 10 pounds weight. Minimum pull of trigger, three pounds. Distances-899, 900 and 1,000 yards. Number of shots—Thirty at each range by each competitor; no sighting shots; matted to last two days; competitors to fire 15 shots at each distance upon each day, commencing at 800 yards. Position—Any without artificial rest. Entrance Feo-Mone. Previous Practice—Competing teams shall be allowed the use of the range for one week previous to the match, but on the days of this match no -competing teams shall be another that the range of the bag of the week previous to the match, but on the days of this match no person will be allowed to shoot on the range at any of the distances prescribed herein, except us a competitor. Captains of the competing teams shall elect two referees, and the referees so chosen shall appoint an umpire, whose decision in all cases shall

be that.

Prize—The American Contenuial Trophy Paima; such trophy to be shot for in each subsequent year upon the same terms in the country of the team arriving. The recognized head rife association of the country represented by the winning team shall also shad and place at which the next match for the determine the time and place at which the noxt match for the trophy shall be short, and shall be the custodians of said trophy and responsible for its safe keeping. The time and place at which the competitions for the Palma are to be held must be announced at least three months in advance. Sights, targets, marking and scoring in the foregoing match to be according to the printed

secing in the foregoing match to be according to the printed regulations of the National Rifle Association of America.

All teams competing for the Paina shall be organized under the auspices of the National Rifle Association of the organized under the auspices of the National Rifle Association of the countries which they represent, if there be such an association of their respective countries. No home team shall be allowed to practice upon the range designated for a competition until such time as some foreign team may be able to avail themselves of like practice. That such home team to be selected at least six weeks prior to the date fixed for the midel. fixed for the match.

THE IRISH-AMERICAN MATCH.—At the April meeting of the Board of Directors of the N. R. A. the following letter was read:—

Board of Directors of the N. R. A. the following letter was read:

RISH RIFLE ASSOCIATION

RISH RIFLE ASSOCIATION

**Problem of the Antional Rifle, association of the Rifle Association of the Antional Rifle, association to express on behalf of the riflement of the Rifle Association to express on behalf of the riflement of Ireland regret that the international rifle match between Ireland and America, so in America and Ireland until 1876, has so long been in abeyance. We feel assured that your Association has only to take this mutter in hand and a team well worthy to represent America will come forward to give Irelance another changes of retroving the honors than the results of the Rifle Association confidently expects that their welcome will be no less warm than that accorded to their preducessors. The dear illust, and your feam could visit we include a result of the results of the resu

The feeling was immediate and alimost manimous in favor of the acceptance of the invitation. It had become manifest to many of the Board that there was little chance of a Palma match during

the present year, and it was seen that an Trish-American match the present year, and It was seen that an Irish-American mater would have very nearly the same effect in rousing publicationion and reviewing the lagging interest in rille practice. The matter was referred to a small committee to collect information, and on sday last report was made that the Columbia Rifle Association of Washington could and would furnish one man to the team, and of washington count and wount trans one man to the examina-possibly two. The Massachusetts Ritle Association could do better, for Jackson, Brown and Gerrish had arranged to visit Wimbledon, and would start earlier, so us to take part in the American match in Ireland. The New Jersey Association thought that Frank Hyde would go as their representative. On motion it was unanimously wond go as der representative. On motion it was minimously resolved that the invitation from Dublin be accepted, and a team sent to Ireland. To carry out this resolution Major Henry Fullon, Col. John Bodine, Col. H. G. Litchfield, Col. E. H. Sanford, Gen. Alex, Shaler, Gen. E. L. Molineux and James Grant were made a Anox banes, our E. B. Monted and dame Grate were made a committee to select and provide for the sending of a team, and the committee will at once set to work on the task, employing a mixed plan of competition and arbitrary selection in getting the

"Perry's Green Book" for Scores.—Now that long-range shooting is to be the rage this summer again, and marksmen are getting back to a style of shooting where an exact record of their getting vack to a styre of snooting where an exact record of their work is of paramount importance, Capt. Perry bis done good service in getting out a third edition of his "Green Book." In the early days of long-range there were a dozen sorts and style of recording the work done with all that minuteness requisite to make the study of the secret-book a matter of profit and pridance at future matches. But gradually the compact, reasonable score at future matches. But gradually the compact, reasonable score-book of Capt. Perry supplanted all the others, because it was made by a rifteman who knew what riftemen needed. In it they could muse field-notes, rough and ready, without going through a long course of double-entry bookkeeping while their gun was cooling. The book contains, too, a valuable set of hints on the use of the rifts, enough to make the life of half a dozen unmunis-And all in all, the agreeable "Green Book" is the one which all riftemen of experience secure and use.

According to the terms of the match four prizes are awarded to the parties making the best first scores prior to 2 o'clock, and appended are the scores of the winners of these supplementary

E. F. Richardso O. M. Jewell . . J. H. Williams. N. W. Arnold... Richardson

Boston, April 9th,-The new classified match at the Manmoth Doston, April 9th.—The new classified match at the Manmoth Rillie Gallery, which commenced on the 1st of the mouth, has shown (for so early in the month) some excellent shooting, and the match is very popular with one and all. Mr. W. H. Harrison, of the Massachusetts Rille Association, leads in the first class with five clean scores, or the highest possible score in the match, namely, 200. He also eclipsed last month's record. This list week he made thirty-one consecutive bull's-eyes, which outranks his last month's shooting, when he had twenty-six consecutive bull's-eyes. He made the best possible 30, and followed it with three clean scores, which is by far the best record ever made in the gallery, Mr. U. A. Pollard was also successful this last week in getting a clean score. He made Khirtene consecutive bull's-eyes lery, Mr. U. A. Pollard was also successful this last week in get-ting a clean score. He madeEthirteen consecutive bull's-eyes. This is the first time Mr. Pollard was ever successful in retting a clean score, although making 39's with apparent case. In the second class Mr. L. W. Farrar heads the list with 192, closely fol-lowed by Gordan McKenzie with 191, and Messrs. Winship and Swift with 188 and 187 respectively. The shooting is of the highest order, and will rank favorubly with any of its predocessors. The following is the standing of the several competitors to date; 150 feet; rounds 8; possible 40; five scores to win, or possible 200:—

| FIRST CLASS. | | | | | |
|---------------------------|------|----|-----|-----|-------------------|
| W. II. Harrison | 40 | 40 | 40 | 40 | 40-200 |
| U. A. Pollard | 38 | 38 | 36 | 39 | 40 - 193 |

Boston April 10th .- The second competition in the new Every moston apprainth.—The second competition in the new Every-body's match, No. 2, took place to-day at Walmid Hill. The at-tendance was fair and the spectators numerous. Among them was Mr. Clements, from Augusta, Mo. 'The day proved one of the most disagreeable of the season, owing to the high wind which prevailed. It was theroughly idokle, vascillating from 7 to 10 o'clock, and requiring from 100 to 200 points of windage. In clock, and requiring from two to ave points of windage. In t, most of the marksmen were beaten by its force. The sun

was also a drawback, as its intense brightness produced a mirrors was also a drawback, as its intense brightness produced a mirage which danced before the largets in a perplexing manner. The entries were consequently not so large, as many proposed to save ammunition for better conditions. Mr. O. M. Jewell, however, controlled the gale and made the largest score, 49 ont of the 50, which was a brilliant achievement for the day. Mr. Charles, with his military rite, also made a capital showing with his 48, two points being added for a handleap, as it is to all who use this arm. According to the conditions of the match, J. B. Osborn made the best first score before 2 o'clock, for which a prize is offered. The host scores arm given, as fullows:

ation's long-range handicap match begins Wednes day, April 14th, and will continue on successive Wednesdays until closed by the executive committee. Open to all comers: 806, 909 and 1,000 yards; rounds, 15 at each distance. Pool shooting at 800 crosed by the executive committee. Open to all concers; say, 899 and 1,000 yards; rounds, 15 at each distance. Pool shooting at 8,00 yards only. Competitors with a record of 296, but not executing 213, will be allowed on each score four points; those with no record above 205 will be allowed ten points. The amount received in excess of expenses will be divided into three prices in excess of expenses with the divided into three prizes, to he awarded to the competitors making the best aggregate of three scores. First prize, 40 per cent, of excess; second, 30 per cent, third, 25 per cent. No competition will be reckoned in which five entry fees are not paid in. Entry fee, for members, \$1; nonmembers, \$125.

The Boston Galleries, April 10th. - Better shooting has never been The Boston Galleries, April 10th.—Better shooting has never been done at the Magnolia Gallery than during the past week. Mr. Hollis has added three more clean scores to his already fine achievement of six full scores, giving him a total up to to-day in the fourth week of the Chassilied March of nine clean scores. On Monday Mr. Hollis made 37 bull's-eyes in succession, the best shooting by far ever done in the gallery. Mr. Hall has already placed to his credit seven clean scores. Mr. Smith has made five clean scores. In the second class Mr. Lawrence has the lead. Distance 160 feet, rounds 10:-

New Bedford, April 8th .- The New Bedford Rifle Association had a meet to-day, the attendance being the largest of the season.

The weather conditions were good, as far as light and a beautiful day were concerned; but the wind was on a perfect rampage, and "old Boreas" beat the best marksmen that assembled at Bay View Forty-three out of a possible fifty was the largest score attained, and the maxpie and blackbird were often shown, and even the old goose came ia for a share of the spoils, as tho summary indicates. The conditions were 200 yards, off-handed, ten rounds:

Mrs. John Statcher then made 10 shots with her husband's rille—4.5 5.2 4 4.5 5.4 3—42.

Regular shoots of the club are on the first and third Fridays of each month. The annual election of officers was held April 2d at the oilice of Judge A. B. Beers, with the following result—
President, Philo M. Beers; Vice President, F. S. Stevens; Secretary and Trensurer, R. S. Bassott. Executive. Committee:
Geo. E. Botsford, Daniel E. Marsh, Harry Nichols, John Slatcher and S. C. Ringman. Shooting Master, John Slatcher. We shall probably have some mid and long range shooting at our next meeting. meeting.

Collinsville, April 7th .--Canton Rod and Gun Club; practice meeting at 200 yards; off hand; 3 pound pull. Heavy north wind:

CREEDMOOR, April 3d .- The opening day at Creedmoor was dull and dismal one enough. The marksmen went down with dull and dismal one chough. The marksmen went down with a storm impending, and before the opening shot had been fired at 100 yards by Mr. D. Banks, with its answering bull's-eye disk, the rain was pouring down. The match was carried through, howrain was pouring down. The match was carried through, how-ever, the wind and rain conspiring to make the shooting more and ad Boult as the men fell back to the longer off-hand ranges

Williamson, 22, 12, 14–16; A. M. Miller, 23, 18, 4–41, Donaldson, Mallery, Dolan, Cass and Miller were allowed three points each for using millitary rifles.

April 7th.—Two matches were shot at Creedmoor to-day, but owing to the cold and the westerly gale they failed to develop any great interest, either through the number of competitors or great interest, either through the number of compeniors or merit of the scores. The first was the Ballard Rille Match, at 100 and 200 yards, for a rille worth \$50. It was won by Mr. D. Hanks, with a total of 50 ut of the possible 70 points. The Remington Rille Match, at 201) yards, for a Remington Creedmoor rifle, was won by Mr. J. H. Brown, with 42 out of the possible 50 points.

April 10th.—The first long range match of the season was opened at Creedmoor to-day with the Remington Shot Gun Match at 80, 900 and 1,000 yards. P. H. Holton, with a total score of 192, was the winner. The Off-hand Individual contest at the short ranges the winner. The Off-hand Individual contest at the short ranges
-100, 200 and 300 yards-attracted attention. A. H. Cobb (75 points) was the leader in the score.

NEW YORK AMATSUR RIFLE CLUE.—The eighth annual ing was held at the Seventh Regiment Armory, April 6th, President R. H. Keene in the chair. The following officers were chosen for the new year:—President, R. H. Keene Secretary, Joseph Holland; Treasurer, A. Alford; Executive Committee, G. L.

Morse, John H. Bird, J. P. Waters, Gen. G. W. Wingate and C. W. Notice was given of the invitation from the Irish Minor. Notice was given of the invitation from the frish Rife Association, and Major Fulton was authorized to represent the club in the N. R. A. meetings to forward the match. The financial affairs of the club are in excellent condition, while the roll of membership is on the increase. A programme of club matcaes will be issued for the present senson within the next few days. STOCKTOS HANGE_COMMEN, N. J., April 10th.—The opening matches at the Stockton Rifle Range took place to-day. The inter-State military contest, leams of ten men, distance 200 and 500 yards, was won by the Seventh Regiment, N. J. S. M., with a score of \$85 are lated 371 made, by the Sixth Regiment same State. W

of 385 against 371 made by the Sixth Regiment, same State. Stevens won the Sharps Match, for military rifles, 200 yards distance, and George Fox was the winner of the eartridge prize, distance 200 yards. The following are the newly elected officers of the association:—President, Gen. E. Burd Grubb; Vice-President, the association :—resident, Gen. B. Burd Grudb; vice-fresident, T. P. Baldwin; Secretary, John S. Lee; Treasurer, Major Wm. M. Palimer; Ex-Officio Officers, Gen. Gersham Mott, Gen. Lewis Perrinc, Gen. William S. Stryker and Gen. William H. Sterling; Directors, Gen. E. B. Grubb, T. B. Baldwin, Col. D. B. Murphy, Col. Danel Lodor, Gen. William J. Sewell, Major William J. Sewell, Major William J. Sewell, Major William J. Sewell, Major William M. Palmer, Capt. B. D. French, Capt. George Wood, Capt. Joseph Burroughs, John S. Lee, John, W. Hoffman, Alexander M. Van Rensselaer, George Polis and C. F. Arnold.
WASHINGTON, D. C. April 10th.—The Columbia Riffa Association laugurated a series of Flow weekly long range matches to-day.

Five men faced the butte, all thoroughly rusty from their winter's rest, as practice has been completely stopped by the savage weather of the past three months, during which time only one match was shot, in mid February, with poor results. The opening day was un-spring-like, and worthy the windlest Ides of March The air was full of driving dust clouds from the neighboring fields of sand and stubble, and Benning's Race Course lent more than its share to the sand storm. A reasonably constant gale blew across the range with a force of from six to ten points of blew across the range with a torecost from six to ten bound at windage, and the sky was clear until the firing was bound at the last stage. The match was called at 3 o'clock with only five entries, the contestants heigh Col. Burnside, Dr. Scott, Mr. Laird, Mr. Lauritzen and Lleut, Hubberd, of the Artillery, the last a new man. Three of these, somewhat to their surprise, in view of the unpromising day, got above 200. In detail the shooting was marked with the vicissitudes natural to built's eye hunting in a dust storm. At 800 yards the leading shots pulled well together, quitting the built's optic only six times among them. Dr. Scott's tally was the best at this range, with eleven consecutive buils at the clese, footing up 73. Col. Burnside tied him on the total, while Mr. Laird came up smiling with 72 to his credit, but with an unlucky magpie at the end of the string. Nine hundred yards saw a failing off for all but the Colonel, who rolled up 71. Dr. Scott began badly with a black cross and five red birds, but nine buils at the finish gave him a good 68. Mr. Laird had a miss, due to a completely ruptured shell, the framements of which stuck unpromising day, got above 200. In detail the shooting was marked due to a completely ruptured shell, the fragments of which stuck due to a completely ruptured shell, the tragment of which stude to the complete of the fifth and the traction of the match, the traction of the match, by arch tends of the mapple's pending the state of the traction of the across the mapple's but the traction of the traction of the traction of the traction of the across the man of the traction of th Burnside won the match and the subscription entries with a

Cincinnati, April 3d.—The following is the score in the twelfth competition for the Baker medal. Mr. Weston, the holder of the competition for the baser mean. 3r. vesson, in a bouter of the find modal, struggled hard to retain it, but Gindelin carried it off by placing to bis credit the fine score of 150 points Massachusetts, or 17 to ut of a possible 75 Credomoor. Additional interest centered in the fact that Weston had to win it but once more to retain it distance, 250 yards; position, off-hand; 16 shots:—

PUBLISHERS DEPARTMENT.

ROCHESTER STILL AHEAD—A FIRST PRIZE TAKEN AT THE WORLD'S FAIR BY A ROCHESTER FIRM—The World's Fair of 1879 was held at Sydney, New South Wales, the principal city of Australia. Exhibits were there from all parts of the world, including those from the largest and best known cigarette and tobacco manufacturers. Notwithstanding the many varieties of German, Russian, French, English and American cigarettes and tobaccos on exibition, the display of cigarettes, Vanity Fair tobacco, etc., made by W. S. Kimball & Co., of this city, was awarded the first prize by the commissioners. A cablegram from Sydney vesterday announced this fact. This is a triumph for Rochester and its manufacturing industries. Six first prizes have heretofore been won by Kimball & Co., at great exhibitions, this making the seventh.—Rochester Democrat and Chronicle.—[Adto.]

—See Messrs. Gibbs & Howard's advertisement of Anti-Rust. It is claimed to be a sure preventive of rust on all metal surfaces. Give it a trial.—[Adv,

WASHINGTON, D. C., 400 M street, Jan. 16th, 1880. H. H. WARNER & CO.—DEAR SIR:—I write to say that after having taken your Safe Pills, and finding them all that is claimed for them in your circular, I cheerfully recommend them as the best pills in the market. JOSEPH PRATHER.

Nachting and Canoeing.

YACHTING NEWS.

THE HERRESHOFF SYSTEM .- By invitation of the builders, we The Arminshoff System.—By invitation of the ouncers, we recently had the pleasure of a trip on board the steam yach! Leila, belonging to Mr. Graham, of Baltimore. The Leila, a cut of which appeared in our columns a short time ago, is 100ft. long, 151ft. beam and 5tt. 9in. hold. Her model is something to look at; for beauty, kulfe-like entrance and run, we have never seen anything like it. She has the Herreshoff stamp all over, not only in the Inconversible feelinging of bull. Just its argentisms down to tilling like it. She has the recreasing samparators, and the incomparable fashioning of bull, but in everything, down to the very fittings, anchors and chains. In all there is evident an independence of thought and an intuitive genius of the most striking kind. The Herreshoffs do not stop half-way; they do not seek simply to improve some ancient arrangement, but toss it aside and begin de novo for themselves and with commendable results, which, we must confess, justify what in most othors would be assumption and sure to end in failure. The engines and boiler of the Lella are similar to those illustrated in this journal, and are a marvel of lightness and elegance. To such an extent has useless metal teen shaved away, that the eye, eccustomed to the ord.nary run of machinery, seems at first sight to detect a decided deficiency of material in their structure, yet practical experience with the ongines is answer enough that something more than mere saving was kept in view, and that the metal has been so well proportioned to the strains it has to bear that they perform as well as any other, and are thoroughly reliable for the it aside and begin de novo for themselves and with commendable so well proportioned to the strains it has to bear that they per-form as well as any other, and are thoroughly reliable for the work intended. Although compound and supplied with inde-pendent cut-offs, they are simple in their working parts, and we question whether there is a bettor vertical engine in the market to-day. It may be off interest to note what the owner has to say of his experience with them:—"The Letla was in constant use of the experience with tuend.— The Letter was in constant the from Oct. 5th to Dec. 5th, making trips down the Chesapeake of ten days at a time; during this period everything worked well, and we estimate that she is safe and reliable and is a good sea boat. This is the third boat the Herreshoffs have bellt for me, soal. This is the proceeding one." But we will not weary the reader with indorsements and tostimonials we have | cfore us concerning the Herreshof coil and engine. Our object is to present to the public an American Invention upon its merits, | | invention which, to America's shame be it said, is to-day bette. appreciated abroad, even in far off Russia and Turkey, than it is in the and of its birth.

NEW YORK YACHT CLUB .- The annual dinner of the club took place A pril 8th, at Delmonico's, and was well attended, 150 covers being laid. After the banquot, which was an elegant affair, speeches were in order, and a brilliant season predicted. Com. Kane expressed the hope that fifty yachts would meet for the annual cruise in August.

ROYAL CANADIAN XACHT CLUB.—The annual ball of this club came off March 31st at the Grand Opera House, Toronto, and was a complete success, over 250 couples being present. The supperroom was thrown open at midnight, and ample justice was done to the good things set out by the club.

NEWPORT CASINO COMPANY.—The followers officers have been

NEWTOR CASINO COSTANT—The Jointown Conference of the Cost of the Year:—President, August Belmont: Viee-President, William R. Travers; Treasurer, John N. A. Griswold, Governors, August Belmont, Wm. R. Travers, John N. A. Griswold, Royal Phelps, Levi P. Morton, C. C. Baldwin, Henry S. Fearing, David King, Jr., Pierre Lorillard, James Gordon Bonnett, Honry Ledyard, T. F. Cushing, Hollis Hunnewell, Fairman Rogers, F. W. Stevens and George B. Fearing.

W. Stevens and George R. Fearing.

KNICKERBOCKER YACHT CLUB.—The annual election of officers of the Knickerbocker Yacht Club, for 1840, was held April 6th The following gentlemen were elected:—Commodore, Wm. Carter; Vice-Commodore, W. A. Stewart; Secretary, Alfred Varian; Treasurer, Wm. Potter, Jr.; Messurer, Chas. Baker; Steward, 6co. Dennerlein; Board of Directors:—A. E. Miller, D. F. Caughlan, F. Fitzpatrick, J. L. Wells and W. Fortor, Jr. The club will open the yachting season with a regatta on May 31st, starting from the club house at the foot of One Hundred and Thirty-second street, East River, Port Morris. We have fitty members, and own three cabin yachts, one catmonaran and nine open yachts.

SKICKEROCKER. OSHKOSH YACHT CLUB.-Editor Forest and Stream:-The au-

on the class of the clection of officers of the Oshkosh Yacht Club was held April 5th, and resulted in the election of Hon. Geo. Club was held April 5th, and resulted in the election of Hon, Geo, W. Bushnell for Commodore; Viee-Commodore, Geo, F. Stroud; Secretary, Geo, M. Hasbrouck; Treasurer, Frank Heilig; Mensurer, S. P. Gary; Fleet Captain, Capt. John Dickerman. Regatta Committee, Robert Brand, G. M. Hasbrouck and Adolph Von Kans. By a unanimous vote of the club, we adopted the constitution of the National Yaching Association, and the Secretary was instructed to remit dues to said Association. The annual cruise question came up, but was passed for future consideration. A resolution was passed to cobperate with the other clubs of the Lake in getting up a series of regattars lasting three days and offering prizes sufficiently large to interest outside competition. tion

A number of yachts are expected here from Chicago, cruising, including Com. Munger's sloop Cora.

A very enthusiastic spirit pervaded the meeting, and a goodly balance in the treasury puts the club in a very flourishing condi-

C. C. M.

WASHINGTON VILLAGE YACHT CLUB.—Officers elected for the year: Commodore, J. W. Mansfield; Vice-Cohmodore, F. A Daniels; Fleet Captain, E. Lanning; Secretary and Treasurer, J. Grose, Jr.; Regatta Committee, J. R. Lanning, F. H. Lincoln, J. R. Murray and J. G. Stewart. Re Sept. 11th, Aug. 14th, and Oct. 9th. Regattas will be held June 26th

Sept. 11th, Aug. 11th, and oct. vin.

Another Venture.—The repeated failures of steam cate, marians do not seem to have deterred others from failing victims to the enticement of high speed, if we are to believe the press dispatches of late, which report Com. Voorhis as expecting great speed from the iron catamaran ho is now building at Nyack-on-the-Hudson. This novel affair will be 2001; long, and consists of two eigar-shaped hulls, each 54ft. dismeter and spread 9ft. apart. The midship portion is of No. 8 from, weighing Tibs. per square feet and the ends of lightly speets shift be presquare for The mindship portion is of 20. 8 non, wogning into perspare foot, and the ends of lightler sheets \$\frac{1}{2}\text{int}\$, persquare foot. Each hull will have four bulkheads as stiffeners. She is to be decked over for 125ft, and saloons are to be bulk on top. The wheel is \$ft. diameter, located about twenty feet abaft midships; dip of blades, \$ft. Shin, and it is intended to make 355 turns per minute: That is, the mechanics of the daily press inform us to that extent. Buckets of 2tt. Sin. dip and 25 turns reads very much like a fairy tale. Hereabod's are furnshing the boller, but are in no wiseresponsible for the undertaking, and small blame to them If they efuse to shoulder the results, which are a foregone conclusion. Theboiler is of the coal type, 103in, diameter, same height, 750ft.

PORT TACK.

of two-inch pipe in inside coil: 23ift, 4in., 70ft, 3in., 35ft, 3in, and 100ft. 2fin. pipe in outside oil; pressure, 1251bs. The catamaran will draw 2ft. 8in., and displaces 38 tons without passengers. Why the Commodore selected such a complicated and expensive engine as the Wells Bahance is difficult to understand. When he comes to settle his repair bills and oil account he may wish he had not. As a single hull weighs less than two, and has less skin. it is oulte certain that for the expenditure of power greater speed is to obtained from such a hull than any catamaran can over afford, the hopes of high speed from this cigar boat are sure to be ruthlessly disappointed; but possibly the Commodore cares more for the deck room, and will be satisfied with as much speed as he can get.

SAFETY BOILERS .- A successful inventor of my acquaintance SAFETY HOILERS.—A SUCCESSFUL INVENTOR OF My Exquantance is making a boiler, which he says possesses over feature described as desirable in your editorial of the 1st inst. I have had some theoretical and practical mechanical experience, and think his olding are well founded. There is but little complication to it; the heating surface is double that of common boilers, weight for weight; no ordinary pressure would burst it, and it is cheap. When it has been tested, I will give you an account of its work-DIVING DECOY

THE NATIONAL YACHTING ASSOCIATION.—The National Yachting Association seems to be gaining ground slowly but surely Formed four weeks ago by delegates from eighteen clubs, the number has been already swelled to twenty, and many more will at their next regular meetings, elect delegates, and formally con neet themselves with the new Association. Our ameter athletes and oarsmen have found it impossible to get along without their National Associations, and the yachtsmen are wise in following the example set by their neighbors of the oar and the cinderpath,-Spirit of the Times.

PAGE.—Spring the Tunes.

FOCDING BOATS.—We have examined and tried Coughtry's folding boats and his new hunter's boat, under the most exacting creamstances. We found the interes, especially, an excellent substitute for a dinghy on small yandis. Light as a feather, buoyant and dry, stiff and safe, they are to be preferred to the usual run of purts and heavy yawis in every respect, and can be folded in life laser may display the property of the of pants and heavy yawls in every respect, and can be fonce in mettle less space than an old-fushioned gingham umbrella. For sports men desiring portable boats to enry under their arm, they are just the thing. The folding boats are somewhat heavier and stronger, and suitable for yachts of a larger size.

YACHTS' HARDWARE.—As the season for fitting out is now close aboard, it will not be out of place to rofer readers to the card of W. & J. Tiebout. At their establishment, 33 Chambers street, will be found a large assortment of hardware and fittings, blocks, chains, anchors, wire rope, etc. This house has been long and favorably known in the trade as the leading one of the kind.

STEAM LAUNCHES .- Mr. Claphum has enlarged his plant, and is FIRST LAUNCHES—SIT. Cliphain has enarged his plant, at propared to build yachts and stean launches of all kinds. Well-known business integrity and familiarity with all class yachts should recommend him to the public. We believe he poses to make a specialty of light drafts for Florida waters. We believe he pro-

CAT-BOATS.-Desmond, of Peck Slip, has finished a couple of finely modeled cat-boats of good depth and moderate beam, which are for sale. They will make excellent hoats for family use

as they are safer than most of their kind.

CANOE FITTINGS.—G. W. Renton, 70 West street, Brooklyn E. D., makes a specialty of cance fittings and boat castings generally. We have in our office a sample of his steering lock for cances, by which the paddle is kept clear of the side, and can be used more efficiently. Renton supplies the trade and retail dealers as well.

YACHTS FOR SALE .- Attention is called to several yachts offered

for sale in another column

SPOINTING BOATS.—The trade in sporting boats of all kinds is reported as very brisk this spring. H. M. Sprague, of Parishville, N. X., and W. W. Parker, of Minneapolis, Minn., have their hands full, their boats being highly appreciated by those who have tried thom.

CONGRESS AND THE VACHTING LAWS.

Editor Forest and Stream :-Attention is called in a recent number of your paper to the pending amendment of Section 4,214 of the United States Revised Statutes, renember to visite the present proposed bill was fattoduced mainly at the fattoduced mainly at fattoduced mainly at the cause of the Cleveland Yachtig Association, it is proper for a member of that body to say a word in reply to lat best of the tricle. A very similar bill was introduced during the lat best of the fattoduced fatting the same properties of the request of an Eastern yacht. the last session of congress at the request of an Eastern yacht club, supported by many of the yacht clubs of the country; but it died in a committee room. The two changes made by the amendment are to make American yachts, irrespective of size, American yessels; and to allow yachts of all sizes to have their name and port painted in any legible manner on any conspicuous part of their hulls, instead of only on the stern in a manner fixed. part of their fulls, instead of only on the series in a manufer axed by stitute. There can be no doubt of the propriety of the first change. For many years all yachis of between ten and utwenty tous burden had to take out liceness as wessels engaged in the coasting trade. Yachts of less than ten ions were not recognized stall. A recent decision of the department holds that yachts of at all. A recent decision of the department noise that years of the less than twenty tons burden need not be licensed. The next year, or next Secretary, may bring a different ruling. Under the present decision yachts of less than twenty tons burden are not American vessels; are beyond the pale of the law. Most of the yachts on the great lakes are in this category, yet they take long cruises. One of our Cleveland yachts, for example, of only ten tons burden, sailed last summer over 2,000 miles, sailed on the retens of all the great lakes except Ontario, and spent much of tons burden, sailed last summor over 2,000 milles, sailed on the waters of all the great lakes except Ontario, and spont much of the time in foreign waters. Other yachts of the same port, less in size, sailed but little less distance. These small yachts wish to be American vessels, enjoying of right and not of sufferance all the rights and privileges of American vessels; to have the right in a foreign port to fly the American flag with the ensign of our club; to their enjoying the consideration always given to yachtsmen worthy of the name. We wish, in American waters, to occupy a position of trust instead of one of suspicion; to legally earry a yacht flag; to share the rights accorded to our larger yacht flag; to share the rights accorded to our larger

brethren.

The clause to which Mr. Cromwell chiefly objects is that as to The clause to which Mr. Cromwell chiefly objects is that as to painting the name and port. If the smiller yachts are made American vessels there must be some change in the present law, or Mr. Cromwell's objection will apply, for the concluding part of the section now in force reads: "Such vessels," meaning yachts, "shall in all respects, except as above, be subject to the laws of the United States." The laws of the United States—Revised Statutes, Sections 4,175 and 4,304, and 18 United States Statutes at large, obap, 467, by 322-require the name and port to be painted on the storn in white on black ground, or in yellow or gilt letters, the letters to be of not less than three inches in length, thus regulating-place, style and size of the lottering. Under this law small

vachts would come if made American vessels, unless the law was changed. I understand these provisions are obnoxious to the owners of large yachts. To change this law the express provision was made in the proposed bill that yachts should only be resion was maid in the proposed out that yacms should only be required to "bave their manes and ports lightly painted on some conspicuous portion of their hulls." The sections above referred to will no longer govern yachts if the proposed bill is passed. The name and port may be, painted in any style or of any size, provided they are legible, and on any part of the built, if sufficiently conspicuous. The laws regulating trading vessels as to place, conspicuous. The laws regulating trading vessels as to place, style and size of lettering will no longer apply to practis, because the latter are expressly provided for otherwise. Of course there is room for a difference of opinion as to whether the name of the possible without boarding or halfing to distinguish the Flettering, of Cleveland, from the Flettering, of Chicago, although both may be of the same size and rig. This is a convocince for the yachtsman as well as for the revenue officials. Again, it might have been difficult to obtain so radical a change as the omission of the name of the port, while it is hoped there will be little difficult to obtain so radical a change as the omission of the name of the port, while it is hoped there will be little difficult to obtain the same size and the promosel bill. culty in procuring the passage of the proposed bill.

Compulsory pilotage for yachts is certainly oftentimes an un-necessary expense, yet it is an oril from which we do not suffer on these likes. We would have included it in the amendment, but first feared lest asking too much we might get nothing, and second, as it was not included in the bill proposed by the Eastern

Yacht Club before refurred to, we thought some reason might ex-jst, unknown to us, for not making the change.

With these explanations we trust that all yachtsmen will feel willing to urge their representatives and Senators to support the pending bill SMALL YACHT.

Cleveland, O., April 5th.

BALTIMORE YACHT CLUB.

Editor Forest and Stream :-

The Baltimore Yacht Club has elected the following officers for the year 1880: Admiral, William P. Towles; Commodore, Wil-liam M. Busey; Vice-Commodore, James Towles; Captain of Ordnance, William B. Oliver; Secretary, J. William Middendorf; Treasurer, Edward L. Bresce: Measurer, G. Wesley Taylor rgeon, Dr. John Getz

Surgeon, Dr. John Getz.

Yachting has heretofore been entirely neglected in Baltimore.

Now and then an enterprising citizen has purchased a sail-boat to
be used for his family and friends, only to be abandoned after a
few summers, with the conclusion that "yachting don't pay."

The manifest trouble has been that the genius of yachting was
wanting. The zealous and enthusiastic personal interest in all
the details of sailing, which fosters the art as now understood,
and seeks to add the value of intelligent individual experience
and observation to the stock of knowledge already acquired, has on conspicuously absent. Our yachtsmen have been mainly sengers on their own yachts, and have felt none of the enbeen conspicuously absent.

husiasm of a sailor. At the portals of Baltimore spreads the majestic Ch affording magnificent yachting ground for a distance of two hundred miles and an average breadth of twenty-five miles. With dred mines and an average oreant of twenty-ave links. With Old Point Comfort as headquarters, the Atlantie is fairly before one, affording umple opportunity for "blue water yachting" and a safe harboy at a fashionable watering place whonever desired. The Baltimore Yacht Club proposes to inaugurate this splendid

recreation in the Monumental City, and hopes by perseverance and maritime ardor to infuse a love of the mattical in the breass of many-possibly even touching the hearts of some of our many millionaires, whose lives are absolutely petrifying for want of

minionarcs, whose lives are associately perturing for water of active and invigorating exercise.

The new yacht building here by Messrs, Boncham & Brothers has her keel, stem and stern-post in place. She will be a keel schooner, 75tt. long, 21ft. beam; depth of hold, 0tt. 6in. Cabin has four state rooms and large saloon, etc. The club has concluded to name their new yacht the Rena.

W. P. T.

Better cruising waters could not be found than the noble

Detere trusing waters count for the foliation that the force Chesapoake affords, and we are gird to note the efforts now under way to build up a yacht club with Baltimore for its hailing port. Many a time has it been our good fortune to handle the stick of the famous old America, with a crew of "plebs" from the Naval Academy to man the gear, and many a fine-sail have enloyed from Annapolis across to Kent's Island, thence to the

we enjoyed from Annapois across to kent is small, thence to the southways to Lookout Foint, and home again to the sheltered hitr-bor Maryland's capital affords. Years ago we wondered why Battimore could not muster a single yacht on the broad boson of the great bay. Let us hope that the efforts to rouse that growing city from its long sleep to mattical activity may meet with the success the prosolyting energy of the newly-formed club seems to hold in view. The time will come when Hampton Roads will be the rendezyous for a large fleet from the North during fall and spring, and the Baltiore Y. C. can do much to attract attention to the inducement more Y. C. can do much to attract attention to the inducements for yachting, for shooting and for ishing, the Chesapeake and its tributary rivers possess to a degree un. xcolled by any other waters in America. We trust the schooner Rena will be but the fore-numer to a whole fleet with the colors of the club at the masthead, and that the members of the club will not form only a close corporation with these results, but will do all in their contractions of the club will not provide the sementials of the weapons untilled and to power to enlist the sympathies of the general public, and to stimulate the spread of love for the noble art of sailing.

THE KATLE GRAY.

Editor Forest and Stream :

Editor Furest and Stream:—
I should like you to give space to the record for 1878 and 1879 of the facht Katte Gray, the most wonderful ten-tonner on the Lakes or on the continent, for that matter. Katte Gray, center-board sloop, was built at Cobourg by Alexander Cuthbert in 1876. Lakes or on the continent, for that matter. Kana troy, center-board sloop, was built at Cobourg by Alexander Cuthbert in 1875. Length on deck from fore part of stem to after part of stern-post, 26tt. bin; extreme breadth of beam, Ilft.; draught of water aft, 2ft. 6in. She was originally shorter, but in 1877 an addition of ten inches was made to deadwood aft, and quarters raised, which made her much speedler and stiffer. Mainsail, 26tt. hoist; which made her much speedier and stiller. Mainistil, 2011, noist; 1815, gaff, and 381t. on foot, 40ft, on stuy, and 30ft. on leach. Bu carries 3,000 pounds iron ballast, all stowed under floor, as no shifting ballast is permitted in our races Racing canvas includes jib topsail, large balloon jib and moderate sized gaff-topsail. Her record for 1878 is as follows:—

June 20th—Won match at Belleville against Surprise, of Tren-

June 28th-Regatta at Trenton, won first prize, beating Sur-

prise and Merlin, of Kingston.

July 2d-Second in Kingston Regatta-partially disabled; won July 21—Second in Ringston Regarding Parlamy Insanded, won by Kalilken, Yielerine, of Alexandria Bay, N. Y., Ihird; Surprise, fourth; Laura, Emma, Zieltia, Maud and Mortin, of Kingston; and Idler, of Brighton, also participated. This race was an anchor start, and Katte Gray got of lists.

Aug. 24—Yon club race at Bolleville, Kelso (Commodore) Cup;

Surprise, second: Kathleen, third: Merlin and Emma gave up.

Sept. 30th—First prize in fall regatta at Belleville; Kathleen second; Gracie, thire; Emma, fourth; Sulvia, last. Her record for 1870 was equally successful:—
June 13th—First prize in summer regatta at Belleville; Surprise,

second : Gracie, third : Sulvia last.

Jully 15th—Beat Ella, of Oswego (21 tons) in match at Kingston for \$250 a side; won by 12 min. 23 sec.

Sept. 6th—First prize and Commodoro's Cup in R. C. Y. C. Re-Toronto; Emma, second; Gracis, third. Gipsy, of Hamitton, Kestrel and Thistle, of Toronto, also competed. Shifting ballast in this race, which was a test between East, and West, and

in which the three Eastern yachts beat their competitors from 25 in which the three Eastern yachts bent their competitors from 25 to 40 min, at their own game. Sept. 234—Second in full regatta, Belleville; Kathleen, first; Emma, third; Surprise, fourth. Gracie, Surprise, Una (Kingston) and Judge Jellett (Picton) also competed.

and Judge Jelect (Fiction) has o compered.
Thus in two years this yacht has won five first and two second
prizes in seven ruces sailed, and in 1876 she also won the GovernorGeneral's silver medal at Toronto, beating all competitors.

Relieville, Ont . April 3d.

REMINISCENCE FROM MY LOG.

In 1863 a young man, now better known as "Captain Jack," In 1883 a young man, now better known as "Captain Jack," called on me to get a yacht built. He desired a sharp, keen, fino-lined boat, finished in the best manner, staunch and stift, and guaranteea to fly. This being settled, the yacht was built and christened the Mardanna. I consulted the youngster as to the size of her sail. 'Give her wings!' said he enthusiastically, "and plenty of them!" The boat was 16ft. long (yacht club size), 7ft, beam and blin, deep. Straight out frame and concave throughout the entire bottom, sharpas a wedge on her harpen and a good deal like a flat from the rolly stability seemed to be in her after body. When in racing trim she had only three mehrs of free board; her deek, however, was like a camel's back. youngel. deat like a matrion, are only stacounty seemed to be in ner after body. When in racing trim she had only three micks of free board; her deck, however, was like a camel's back, reminding me of a Chesapeake sneak-boy. She was covered in, with only space enough for the crew (four men) to stick their feet in; this space, when illied, only held eighteen gallons of water, hardly enough to give an eel a drink. She was, indeed, a miniature still g life-boat. I took first premium at the Franklin institute a few years previous, for a host similar to her. She could be espisized and righted again in mid-river. I put one "wing" (cat) on her, placing the mast directly in the wate of her apron, elongating the heel, straidling the step to get room, for she was as sharp forward as a razor. Her mast was 3fft, long and \$\frac{1}{2}\text{in}\$, at the deck; gatt, \$\frac{1}{2}\text{it}\$, is one, \$25ft. \$\frac{1}{2}\text{it}\$ made her debut on July \$\frac{1}{2}\text{it}\$, with one threst, blowing hard, and, as all northwesters do, veering and squally. Got under way will the feet. At Tuttle's Point a regular snorter struck her and she gently turned over, spilling two, Mayberry and Halnes, into the gently turned over, spilling two, Mayberry and Haines, into the river; making a curve to the windward, with her "tub" full of river; making a curve to the Windward, with her "thib" Thill of water, the outs were soon magentered fit nagain, and she came in second boat at Tacony. On her way home she capsized six times, and was righted each time by placing a man on her enter-board. Captain Jack declares to this day he only "dumped" five times. The distance sailed was eight miles. On one occursion an excurfine distance value was eight limes. On the occasion an exem-sion steamer loaded with passengers was about to pass our cham-pion, when a heavy puff struck his boat and she "turned up." The steamer was promptly stopped, everything worthy of old The steamer was promptly suppeas, everytning worthy of old salts and a first-class humane society, was done to save the perishing crew. Two men from the steamer Jumped overboard, life preservers and everything loses and dotatable was cast upon the troubled waters. While the excitement was at the highest pitch, our "Champion" placed one of his men on the center-board—the over-ready lever—raising his boat quickly on her feet, and sailed over-ready lever-raising his boat quickly on her feet, and sailed out triumphantly with uplifted caps. At a regatta given at Smith's Island by Zimmerman & Gazelle, these gentlemen pub-licly presented Captain Mayberry with a handsome sitver medal, appropriately designed, as the champion boat-upsetter on the river Deaware. The venerable yacht sailor, "Johnny" Wright, had for years enjoyed this title; no one could dive deeper and had for years enjoyed this title; no one could dive deeper and come up wetter, or could turn a yacht up easier or oftenor than he, but alas for greatness, how transitory! The writer as first officer, and the Champion as second, with two others as crew, left Cooper's Point Sept. 28th 1863, for Cape May, in the Mariana. We made the run down to the Cares in 21h. 55m, as the anna. We made the run down to the cance in Zin, Som, as the Cape May Wace of that date will attest. We returned home on Oct. 7th in 2ih, 50m. Doubling the Cape on our return just as the sun rose, a plight boat stood acress our bows, and halled: "Where did you come from?" "New York." "Were you on the coast last night?" "Yes." The—you were." When we remember that we were in a löft. boat, carrying a âift, mast, with only 3in. of free-board, with every man laying out to windward to hold that we were in a lott. look, carrying north mass, who only only of free-board, with every man laying out to windward to hold her up, and on old ocean at daylight, with Christian forbearance we excuse the profunity of the pilot. After this proof of her seagoing qualities, Capt. Mayberry offered to match her against any boat of her length. The celebrated Dager was then in her prime. boat of her length. The eclebrated Dager was then in her prime, and a race between the boats was long talked about, but never culminated, the Dager men eventually declaring they would not sail with a boat that did her best work with her mast-head fly trailing in the water. In short, that when a boat gots "that low," see should be considered upset and ruled out. I have had the good fortune since then to build my old friend Mayberry several "fyers," but he still clings to his old love, and the memories of his early yachting days grow fresher and stronger with advancing time. The Markama still survives; seveneuen years has taken some of the life out of her, but she looks good yet, and as ready as ever to be turned up by her oid commander, on short ready as ever to be turned up by her old commander, o notice R. G. W

BOW-FACING ROWING GEAR.

Editor Forest and Stream :-

Editor Forest and Stream:—
Some six months since J purchased of William Lyman, of Middiefield, Conn., a boat (made to his order for me, by Mr. Rushton,
of Canton, N. V.) fitted with two pairs of his patent, bow-facing
oars. After going over two hundred miles with them in all kinds
of weather, sometimes in pursuit of game, and sounctimes for exof weather, sometimes in pursuit of game, and sometimes for ex-orcise and diversion simply. I can strongly commend both oars and boat. It is within bounds to say that these bow-facing oars double the attractiveness of rowing. If we could find people who had always walked backward, and at last discovered how they might, with much greater case, walk forward instead, their case would furnish the best illustration of the practical value of the "bow-facing" invention. The frequent turning and twisting the "bow-facing" invention. The frequent turning and twisting of the head to make sure of the course, avoid rocks, trees, or headlands—all are banished perplexities to him who uses Lyman's cors. If one drops the oars quickly to seize his gut, or for any other purpose, they trail alongside with as little interference, outside or inside the boat, as any old-style car. If the oars are to be "shipped," the operation is accomplished with as little difficulty. The introduction of the universal joint gives great free-dom of movement, combined with almost perfect silence in the pursuit of game.

pursuit of game.

Now, as to objections, I have found only a few that are worthy of mention. They involve cost, "feathering," use of oars for purposes of paddle and boat-book, and the time required to attach to, or detach from, the boat. In most cases, and in this case, decidedly, the best is cheapest.

These oars cannot be "feathered," and the objection must stand for what it may be worth. It is best to carry a boat-book with any kind of oars, and It can easily be combined with an ordinary paddle in one article, if desired, I carry a boat-book and a light, ordinary oard. They cost little, weigh little and occasionable are of service.

ally are of service.

The extra time to attach and detach will average from five to ton secands, but this objection is more than counterbalanced by the absence of oar-locks that may be easily lost or "borrowed."

A word about Rushlon's boat. It is by all odds one of the bost for rowing I have seen, and bassome great advantages for hunting. It is EIX, long, weighs #81bs, and carries four persons comportably. It combines safety, speed and confort to a great decreas.

AMATERIA Middletown, Conn., March 29th.

NEW PUBLICATIONS.

THE PACIFIC TOURIST. William's Illustrated Guide to the Pacific R.R., California and Pleasure Resorts across the Continent. By Henry T. Williams. New York, 1879. Price,

his hand-book of Trans Continental travel is prepared upon a This mand-nook of Thins Commental rule is prepared upon a scale never before attempted. It is intended first to be useful, and to this end the editor has detailed at considerable length full descriptions of the railroad routes, places of pleasure resort and noted scenery in the far West, information about towns and cities, noted scenery to the far West, internation about towns and clues, routes of summer travel, best focalities for hunting and fishing, and such other topics as make this a complete guide. There are special contributions by Prof. F. V. Hayden, Churence King, Joaquin Miller, and others, with illustrations by Moran, Warren, Snyder, Shell, Troy and Will. We cannot praise too highly either the plan of the work or the admirable manner in which it is put

TWENTY YEARS OF INSIDE LIFE IN WALL STREET. BY William Worthineton Fowler, New York: Orange Judd Com-pany, 245 Broadway, 1889. Ten years ago Mr. Fowler published a book on Wall street, of

which he sold forty thousand copies. It detailed his own personal

which he sold forty thousand copies. It detailed his own personal experience as a speculator, in a series of pictures of Wall street life, which were so proline and truthful, that the merits of his book were at once recognized by the press and the public.

The volume now before us is the old book rewritten and brought down to date. To the narrative of the exciting scenes of ten years ago, has been added a history of the gigantic stock movements of the latter part of 1879. There is much truth in the book, as well as much sensation.

BOOKS RECEIVED.

MANUAL OF YACHT AND BOAT SAILING. Dixon Kemp, Field office, London.

Second and enlarged edition. Price in England, \$6.

A CONNECTICUT Doo STORY.—The New Haven Union is responsible for this:—"A Rockwille sporting man, having a fine litter of setter pups—pedigreed stock—was taking special pains to give them a good start in the world, and to this end it was his custom to rise from his bed at short intervals to feed them. It became rather tedious business for him to 'crawl out' during the cold winter nights to attend to their wants, so he tried a new plan. Setting a pan of milk in a warm corner behind the stove, he went to bed, and in the small hours the young canines called for food. Thinking to make one job of it he arose in the dark and carried the pan carefully to the woodhouse, when seizing each pup by the nape of its neck he thrust its nose into the pan, and when all had 'got to their work,' returned to his bed. The next morning he was roused by his wife, who wanted to know what in the world he had done with her bread pan. Investigation followed; his wife had wet up a batch of bread and set it behind the stove to rise; this pan our 'shot' had carried to the pups, and they, after gorging themselves with the dough, waddled back to their warn nest. The yeast was good and the puppies rose, looking like so many muffs, with the head of the animal used for trimming, while their legs and tall resembled warts on an early rose potato."

ONE WAY TO BREAK A DOG.—Boston, March 24th.—I read your paper with much interest, especially the one of March 18th. Real things and real facts we all like—fanciful ones rarely. But I must confess I am fearful of being considered imaginary by most of your readers, when I relate the following about my setter dog, Prince. He is six years old. No one has ever shot over him but

myself. For the last four years I have been in the field with him, four or five months each season, commencing in Sept., in Maine, and ending the 1st of Feb., in Virginia, giving him more practice than one dog in a thousand gets. When he points a bird, I take my position and then say to him, "If I kill this bird, I want you to fetch him as quickly as you can," and he will do it. Again, I take my position and say to him, "No, no, Prince; you must not go after this bird," and he stands like a post and makes no move to retrieve the bird, unless ordered to do so. He never drops at shot, but will stand and mark the bird, if not killed, as carefully and correctly as I can. He is a pure Laverack. I claim that, if you have an intelligent dog to start with, and keep him entirely under your own training, by kindness and lots of good common sense teaching you can advance him beyond belief. myself. For the last four years I have been in the field

The Forest and Stream, about May 1st, will remove to the new office, now being specially fitted up for its reception, in the New York Times building, Nos. 39 and 41 Park Row. The editors seem to have grown weary of gazing at the varnish sign across the street, and desire to exchange this "for an outlook over the Jersey hills, and to the sunset beyond." We have no doubt but that in the future the Forest AND STREAM will be just as readable and just as full of the good things which have occupied its columns heretofore, and which make it the most attractive publication of its kind which comes under our notice.—Insurance Monitor.

Foreign Guns too Chear.—Editor Forest and Stream:—I wish to say a few words through your valuable paper in regard to our American gun-makers. I have been trying to introduce our home-made guns through this city, for I feel that there are as good guns made in America as abroad; but I find in doing so that there are three in every life who can get a discount of some of the manufacturers far below what they claim is their standard price. Now, I call this poor encouragement to the retail dealer to sell American guns, for their discount is small to us. Importers also sell to hardware men, who don't pretend to deal in their goods, as low as I can buy. I, for one, will not attempt to sell more until the manufacturers keep to their retail price. And I want to see other retail dealers stand up for their rights.

GUNPOWDER. DUPONT'S

RIFLE, SPORTING and BLAST-ING POWDER.

The Most Popular Powder in Use. DUPONT'S GUNPOWDER MILLS, es-

tablished in 1802, have maintained the froat reputation for seventy-eight years. Manufacture the following celebrated brands of Powder: DUPONT'S DIAMOND GRAIN,

MOST BIAMOND GRAIN,
Wos. 1 (course) to 4 (fine), unequaled in strength,
quickness, and cleanliness; adapted for Glass
Ball and Pigeon Shooting.
DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 8 (fine), burning slowly, strong,
pad clean; great penetration; adapted for Glass
Ball, Pigeon, Duck, and other shooting.
DUPONT'S EAGLE RIFLE,

Quick, strong, and clean Powder, of very fine grain for pistol shooting. DUPONTS RIFLE, FG, "SEA SHOOTING,"

DUPONT'S RIELE, FG, "SEA SHOOTING,"
FFG and FFPG. The FG for long range rille
shooting, the FFG and FFFG for general use,
burning strong and moist.
SPORTING, MINING, SHIFFING, and BLASTFNG POWDERS of all sizes and descriptions.
Special grades for export. Cartridge, Musket,
Cannon, Mortar, and Manmoth Powder, U. S.
Government standard. Powder manufactured
to order of any require grade one care

A Two Weeks' Camp Bunt.

HAVE been reading the letters of your correspondent from North Park, and cannot resist the temptation of indorsing the candor and truthfulness of his articles, Every one who has studied Nature as she is-stayed with her, not in imagination around a cosy fire in some wellarranged parlor, but in her sleet and snow, days of brightness and nights of gloom, will recognize at once a true picture in "Letters from North Park,"

The novice starts out with the idea that a "camp hunt" in the mountains or on the plains is a life of elysium. He wants no blanket, no lunch, no tobacco, no canteen no stimulants, nothing-but herds of antelope and myriads of buffalo. In about two hours his ardor cools, while his blood gets hot. He wants to know if you brought your canteen. Two hours more, and he would like to know if you forgot your lunch. Two hours more, he wants to know if you have any stimulants about you, and 50 on, till night, when you are compelled to share with him your blankets, and probably sit up with him half the night in the darkness and cold trying to stave off a fit of cholera morbus or some other impending disaster. No one starting out for the first time on a camp hunt should fail to supply himself with every necessary, even to luxury, for at best he will feel the want of home comforts.

On the 7th day of October, 1879, Dr. P. and myself left this place for a two weeks' hunt in the heart of the Great American Desert. We expected to give our attention to buffalo principally, as we had been vaguely informed that from two to five hundred were leisurely roaming about on the plains, somewhere between the Kansas Pacific and the Atchison, Topeka and Santa Fe Railroad, on the head of White Woman. When we arrived at Lakin, Kan., we found our guide absent, and having nothing better to do we concluded to make a tour twenty-four miles south on the headwaters of the North Canadian. Having secured the services of about as vulgar a specimen of humanity as ever hailed from York we started in a little spring wagon over the Arkansas River and adjacent sand hills. When about fifteen miles out we saw our first antelope of the season, Reaching our camping ground two hours by sun, we con-

cluded to watch the lakes for antelope coming to drink. The lakes were covered with ducks, and a small herd of antelope was grazing about a mile off, but showed no inclination to approach any closer. Near sundown some men, with a herd of over four thousand sheep, coming up from New Mexico, went into camp near one of the small lakes which constitute the headwaters of the North Canadian, or Cimarron. Two antelope came to water in the dusk of the evening, but, as they were nearly half a mile distant, our shot did little else except to frighten them away. Our factotum had gone into camp some three quarters of a mile distant, and as it was now dark, and not finding the camp where I expected it, I proceeded on up stream, and after considerable hallooing finally succeeded in making port. We had only cold lunch for supper, but plenty of covering. We spread our blankets upon the buffalo grass and took a suck of eats for a pillow. The forepart of the night was still and calm, but soon after lying down a frest southwest breeze began blowing, and as the night advanced the wind blow colder and fafter the newly-discovered planet wandering in its mysterious course amid star dust and the shadow of innumerable wordls. Not succeeding very perfectly in my scientific investigations, I turned over and looked at the bloody face of Mars until I fell asleep.

My quondam friend, Dr. P., who is an old timer in

wandering in its mysterious course amid star dust and the shadow of innumerable worlds. Not succeeding very perfectly in my scientific investigations, I turned over and looked at the bloody face of Mars until I fell asleep.

My quondam friend, Dr. P., who is an old timer in camp and field, but new in life, and who had been snoring away all the forepart of the night, now woke up and commenced to meditate. The little dog brought along by our driver, because he could whip his weight in wild cats or coyotes, kept up a continuous barking. Soon the coyotes set up a howl, and the Doctor thought that they were the sheep, but the distant howl came nearer and nearer, and instead of bearing down to the shepherd camp it evidently was approaching our own retreat. There is nothing very pleasant in contemplating the onward march of a pack of hungry wolves, especially when they are mixed up with an occasional gray wolf, one of which had been seen just before sundown. Our fighting dog ceased to bark, which was remarkable, as the Doctor said he could plainly hear the rustle of the grass as the pack seemed to be gradually closing in upon us. We all are apt to think that we would do so and so under certain circumstances, but when an emergency arises there is no accounting for the freaks of human nature. Instead of arousing the whole camp, and giving us some show of self-defense, the Doctor simply pulled the blankets tightly over his head, regardless of a pair of No. 10 boots firmly attached to his distal extremities. What his idea was, or what particular train of meditation his individual succession of the particular train of meditation his mind had taken, no one but himself knows to this day. Probably something like thiss-for the mind, when thoroughly aroused, travels with incalculable speed, as we, in our dreams, cover immense areas of space, and review the history of ages in a moment of time, so now——! will cover up my head. This is my only secure defense. Nature has so taught the ostrich in the perils of his desertation. This pervened everything appeared as plains day. The steadthy tread of carnivorous brutes had simply been metamorphosed into the tread of the old gray mare which helped to bring us hither, and no doubt got a snift of the sack of oats, and hastened for them as fast as her

hobbling feet would carry her, and she was now enjoying a midnight meal of delicious oats, while Dr. P. was sitting up and cooling off, and no doubt feeling very grate-

a midnight meal of delicious oats, while Dr. P. was sitting up and cooling off, and no doubt feeling very grateful for our safe deliverance.

Early the next morning Dr. P. and I started on up the plain, afoot, for the purpose of stalking antelope. Before leaving camp we gave some small change to our Jehn, with instructions to go to the shepherd's camp and procure, if possible, some coffee for our breakfast. We had not gone to exceed half a mile, when we discovered a small herd of antelope grazing, but before we could get within anything like gunshot, they scanpered away. We had now become separated about four hundred yards, a young buck was lying down. The Doctor discovered him squatted and commenced waving his hat. I, at first, did not know what the Doctor meant, but thought that he was beckoning for me, and knowing that his gau would sometimes refuse to go off under the most favorable circumstances, I concluded to hasten to his aid. But the vigorous up and down motion of the old black hat suggested the idea that it was intended for me to "down charge," so I dropped on the grass. This solitary young antelope started toward the Doctor. His step was stately and grand, walking a few paces, then looking—again approaching, until finally he was within sevenity or eighty yards. He stood for a moment; then, with a quick bound, turned and ran away for dear life. When quite out of gunshot Dr. P. let fly one shot after another until his magazine was about empty. I now joined my friend, and sought an explanation of his conduct.

"Well," said the Doctor," "you know that wild animals seeing a strange object are very apt to come near enough to satisfy their senses what it is."

"Yes; but why did you not shoot, when the antelope was so close? It couldn't have been over seventy-five or eighty yards."

"Well, I have heard it said that they sometimes play about first running off, and then approaching even

was so close? The content that electric electric varies."
"Well, I have heard it said that they sometimes play about, first running off, and then approaching even nearer, and I thought that I would try it."

nearer, and I thought that I would try it. The end, however, not justifying the name, we came to be conclusion not to attempt the proof of any more fine spun theories with antelope. We returned to camp and found our breakfast ready, the men with the sheep sending us all the coffee they had, and very kindly re; fusing to accept anything therefor, as they expected to reach a station by night. They also sent us two large California snipe, a bird evidently belonging to the Scolopaa family, but, for all practical purposes, about as palatable as our Western mud-hen. Our driver rousted one over the fire and devoured it with a great deal of gusto first taking a bite of raw onion, and then a bite of snipe, and then a drink of cold coffee. I ate the other bird, but found it "fishy and sedgy."

The Doctor and I now started for the lower lake, about a mile distant, for the purpose of lying in wait for game.

and then a drink of cold coffee. I ate the other bird, but found it "fishy and sedgy."

The Doctor and I now started for the lower lake, about a mile distant, for the purpose of lying in wait for game. We saw seven antelops in the distance which seemed to be working their way to the water. We lay flat down on the grass, as there was no blint to hide us from view for miles around. Nearer and breat a part. I was afraid to move. The Doctor was at the cast side and I at the south end of the lake, some two hundred yards a part. I was afraid to move. I saw at least a dozen places preferable to the one I had, for it seemed as though I was on a little mound. I placed my left hand under my head, resting my elbow on the ground. I kept this position for at least an hour, not daring to move. The doces were now within fifty yards of me, and the Doctor tainking, by my not shooting, that I must be asleep, halloed to wake me. This caused two of the does to stop broadside—one just beyond the other. I could have killed them easily, but then I thought about what we should do for meat next year. The old buck was standing with his head to me two hundred yards away, apparently meditating and oblivious to any approaching danger. But the Doctor's voice, or something else, caused him to look up, then quickly walk lifty yards nearer and stop. Turning broadside he commenced grazing in the direction of our camp. He had espided our teamster, who, contrary to orders, had broken camp and started following su up. I now thought it was my chance, so I took up my rifle with my right hand, and removed my left from under my head cautiously as possible, but found my left arm almost paralyzed from its long continued cramped position. I took deliberate aim on the middle of the shoulder, using Major Fulton's position, and pulled trigger, At the crack of the gun, down went the big buck with a thud, and away scampered the does. Losing all thought about mean for next year, I sent four or live wicked shots after them, but am glad to say, "never touched,"

Not hearing anything from our guide, and it being late in the week, I concluded to take a run up to Colorado Springs, some one hundred and fifty miles further west. As these springs have been so elaborately written up by the versatile pen of "Grace Greenwood." it would be usedess for me to alt mpt to add anything thereto. In fact, I think that everything has been said in their praise that is possible to say, with any regard for truth. We found the springs in a manner descred, that is, about Manaton. Noticing some bills tacked up on one of the awnings over the spring, I pulled one down and read where to go to hear the first proclaimed. An angel lowering in the air had made known a new and Divine revelation to the sons of men. This fact was to be announced and amply verified by some one claiming to be a "latter day saint." I didn't go. I wanted to see the Garden of the Golds.

same a manage, I wanted to see the Garden of the Gods.

I left my antelope head at the Springs to be mounted and hastened back to Lakin. Dr. P. had received a letter stating that our mutual friend, Frank II., would join us on Monday morning. This was good news, for we wanted Frank to accompany us at the start. Frank is one of those polished gentlemen who exhibits good manners at home and abroad—something not always adhered to when the restraints of society are removed. Bright and early Monday morning we were up trying to get a shot at some coyotes, but failed to bring any to bag. The train arrived at 0 o'dock, and sure enough there was Frank, bag and baggage, with a brand-new gun, with double, open and peep sight behind. Now was hurry and bustle. We could hardly wait for breakfast and team. But with all our efforts it was near noon before we started. Our objective point was south of the Arkansso, on the flats, this field giving us plenty of sport at long range, and Frank was over anxious to try his new gun, saying that all our efforts it was near noon before we started. Our objective point was south of the Arkansas, on the flats, this field giving us plenty of sport at long range, and Frank was over anxious to try his new gan, saying that he "just knew how the thing was done." We had not gone far after crossing the triver before we discovered antelope, some feeding and some lying down. They permitted the wagon to come up to within two hundred yards, and Frank got out. As a matter of courtesy we granted him first shot. Ho took a shell out of the case and passed it into the breech of the gun, and finding that the breech-block did not readily close he used some force and wedged the shell so fast that the extractor failed to remove it. Dr. P. now became nervous and wanted to shoot, but Frank asked him to wait, showing considerable excitement and working hard at the hung shell. "Bexar" never had a worse case of expanded shell than this seemed to be. Frank worked manfully and finally succeeded in pulling out the shell and leaving the ball fast in the gun barrel, while our friend fussed and funed until the antelope were niles away. Soon we saw a solitary one, and as it crossed us about a half-nile away I shot in advance of it, the ball raising quite a fog of dust. This frightened the animal so that it wheeled and bore down directly upon us, coming to within a few hundred yards before turning. I gave it another shot, cutting through the brisket, and one of the other guns brooke a hind leg, but not having any way to follow it up failed to get it. Late in the evening I broke the shoulder of another, but failed to get it.

through the brisket, and one of the other guns broke a hind leg, but not having any way to follow it up falled to get it. Late in the evening I broke the shoulder of another, but failed to get it.

On Thesday morning we learned that our guide had arrived from the buffalo range, bringing in five beeves. Everything was now making ready for a regular camp but, our guide assuring us that he would show us buffalo. We packed our traps into two wagons, and went some fifteen miles that evening. Just before sun down we stopped for camp, and I assisted in pitching our tent—the first field tent that I had slept under since the "late unpleasantness." Next day was rather hazy, and turned colder, At 10 o clock we saw a solitary buffalo, evidently awanders. We all gave him a few shots apice, but to no purpose. We stopped for dinner near the head of White Woman, having trayeled near fifty miles since leaving the station. The wind was blowing almost a tornado; the sky was dark and lowering, with occasional claps of thunder. We crept in the crevices of the rocks, which make a solid wall for some distance. We discovered where a temporary fort had been made out of loose rock by piling them up in the open end of a large fissure in the rock. Some party had certainly been hesieged here, as we could see a great many enupty brass shells of the old Springfield 54 and 52 caliber strewn about on the ground. We also found a steel arrow-head.

The clouds parted and the sun came out, but the wind continued to blow. We hitched up our teams and moved on down the river. Some distance from camp we discovered a solitary natelope feeding and watching, and thinking it a good chance to stalk, Frank and I got down in the bed of the stream, leaving the teams, and by stooping and crawling along until almost worn out and getting our boots full of gravel, we finally got up within a hundred yards, and as we peeped up over the hill our little antelope was leisurely grazing, and not aware of any danger. I suggested to Frank that he give the command to fire.

We proceeded down the creel; for a few miles and went farto camp. Had a nice fry of antelope liver for support. The night was dark and cold, so much so that we could not steep with any comfort. About 3 o'clock the Doctor and 1 got up and gathered what fuel we could find and mate a fire. About daybreak we are breakfast and gathered by our traps and started. The sun came up bright is, wood, injuneek and mand nice and the wind had calmed down during the night.

After traveling four or five miles our guide stopped and called our attention to some fresh buffalo sign. Thera were the beds and fresh litter. I got up on top of the wagon seat and discovered six large buffalo lying down. Our guide told us to get ready, and we all felt sure of getting a prize. When everything was ready our guide formed us abreast, locking each other's arms, and told us to march straight up without stopping. We found this hard to do, as no two stepped alike, but all evidently bent on first shot. Just as we came in view, and while yet a long way off, our friends concluded to leave, and they did not stop the run as fur as we could see. There was nothing left for us to do but leisurely follow up the trail with on first shot. Just as we came in view, and while yet a long way off, our friends concluded to leave, and they did not stop the run as far as we could see. There was nothing left for us to do but leisurely follow up the trail with the hope of overtaking them. Two or three o'clock in the afternoon we came in sight again. It was cloudy and a fierce we came in sight again. It was cloudy and a fierce northwest wind blowing. I thought we would all chill to death. We could see that the animals were tired, as they would often stop to look at us and then turn and walk away. We concluded to try a shot at three hundred yards, but failed to do any damage. Soon after the herd separated and we gave them up finally. But while they were still in sight we discovered a sucking calf approaching, whose mother had been killed, no doubt, but a short time. Seeing us the calf started for the teams; our guide told us to go out a hundred or so yards and hay flat down and that it would come up to us. Sure enough, the dumb brute came to within fifty or sixty yards, and Dr. P. said that it was a pity to kill the innocent thing. I told him that I believed that I wouldn't shock. Frank soid, "Well, he had come out to kill buffale and was going to shoot." The Doctor thought that if Frank shot that we had as well all shoot. So we all fired and made a clear miss, when Dr. P. gave it a second shot on the wing, breaking its neck.

We spent another night on the high plain—the coldest, most disagreeable night that I ever spent in camp or field. This determined us to start for home, leaving our guide still in pursuit of buffalo. We made the station about 0 celect that night without any loss and packed up for home next day.

The plains are almost destitute of fuel and water. The

home next day.

The plains are almost destitute of fuel and water. The The plains are almost destiliate of fuel and water. The supply of buffalo chips had disappeared. There does not seem to be much trouble in getting water by digging a few feet anywhere near those depressions that are called creeks. What a great benefactor must be be who would have a few thousand bored wells senttered about over the plains! And then if the Government would only cause a few electric lights to be placed along the railroad every few hundred miles, many lives would be saved.

SPRING NOTES FROM MINNEAPOLIS, MINN.

MARCH, 1880.

MARCH, 1880.

ROM the 23d to the 27th of February was mild and pleasant, and it seemed as though we were again to have an unusually early spring. The shore larks had appeared about the middle of the month; a red-winged blackbird was seen on the 26th. The snow buntings and Lapland longspurs were in their usual early spring abundance, and the snow had entirely disappeared from the ground. But on the 25th snow fell all day, and March came in with a moderate amount of snow on the ground and the thermometer on the morning of the 1st 2deg. On the 2d and 3d it was again mild, the above zero. thermometer being 52deg, at noon on the 2d. The snow all melted and a bluebird was reported on the 3d. From the 3d until the 21st it was continuously cold, with much changeable and disagreeable weather, and occasional light snow-falls. On the morning of the 14th it was 8deg. below zero, and on the 16th 7deg. below; with frequent readings, morning, noon and night, between Odeg, and 20deg. On the 16th a male long-cored owl (Otus wilsonianus) was shot in a piece of woods where one appears regularly every spring, and the same day I heard the longspur (P. lupponicus) singing for the first time this year. In an old field grown up in grass and bushes I found a large flock of the P. lapponicus. Some of them were feeding upon the ground, while others were sitting in the low bushes uttering their spring song, which improves much as the season advances. Upon starting the whole flock into the air it circled around for a time in the usual erratic manner, and then alighted in the tops of some small oak trees. No sooner were the birds settled than they all started to sing, and although the individual effort is, at this season, neither very full nor continuous, yet the effect of the general chorus was musical and pleasing. A flock of blackbirds often act in a very similar manner. This "congregational singing" of longspurs is their common spring habit, and is as often indulged in while they are sitting upon the ground as elsewhere.

The 21st another bluebird was seen, and on the 22d marsh bawks, a red-tailed hawk, a flock of mallard ducks and a great abundance of longspurs.

From this time the spring birds began to arrive almost daily, and it will be better to give the record in diary form. The readings of the thermometer were taken three

times a day—morning, noon and evening, March 24th, 30deg., 41deg., 31deg.—The first robin. Male ring-neck and hooded merganser ducks shot. Wood

March 25th, 30deg., 41deg., 37deg.—About five inches of snow on the ground, which fell last evening. Three

March 26th, 36deg., 49deg., 44deg.—A kingfisher, rob-ins, wood, ringneck and mallard ducks shot, Wild

March 27th, 44deg., 38deg., 39deg.—Rained all day; the

March 27th, 44deg., 28deg., 39deg.—Rained all day; the first time for many weeks. Another kinglisher.

March 28th, 38deg., 49deg., 37deg.—Clear and pleasant.

March 29th, 30deg., 51deg., 36deg.—Clear axway asand-hill crane flying over. Although at a great height, its loud notes were distinctly andible. Noticed as small flock of crow blackbirds. This bird is occasionally found here in the middle of winter (fan. 7th, 1876), but cannot be regarded as a resident. Waxwings (4. garrulus), bluebirds and robins. Suckers and pickerel are-running in some of the streams.

March 30th, 40deg., 50deg., 48deg.—Clear and warm; windy. Two white-bellied swallows, ruby-crowned and golden-crested wrons, fox-colored sparrows, meadow lark, house pewee, song sparrow and brown crepers. The last species is of accidental occurrence during some winters—(Dec. 10th, 1874; Jan. 19th, 1877)—but it comes in numbers with the early spring arrivals and is then more noticeable than at any other time. Pintail and spoonbild ducks are here. The snowbirds (Jineo) have appeared abundandly in the hedges and bush piles. A large flock of thistle birds (C. tristis). Downy woodpeckers mating. The ice went quietly out of the Mississippi River at this point to-day. Previous to 1878 it was not usual for the river to open here before from the 7th to the 13th of April. Winter held on firmly until the last days of March, when there was a general breaking up—melting of snow and ice, and arrival of spring birds. But during the last three years it has been very different. The break-up has been much earlier, and instead of abrupt has been gradual and interrupted by many birds. But during the fast three years it has been very different. The break-up has been much earlier, and instead of abrupt has been gradual and interrupted by many birds returns of cold weather. In 1875 and 1876 the ice disappeared from the river April 12th, and in 1877, April 7; while in the early spring of 1878 it went out gradually between the 5th and 14th of March; in 1877 on March 29th, and th

March 31st, 42deg., 40deg., 34deg.—The first thunder-storm of the season this morning. It always seems spring-like to hear the roll of the thunder after the long silence of winter. Rained, and at times snowed, most of the day. Several golden-crested kinglets, meadow larks in song and a large company of brown creepers. While standing watching the creepers as they passed from tree to tree through the woods two of them came and lit on my eldthing and after a short examination than to. standing watching the creepers as they passed from tree to tree through the woods two of them came and lit on my clothing, and after a short examination flew to a tree about two feet distant. One of them passed in succession up each of my arms and seemed in no haste to leave. What conclusions they arrived at is beyond conjecture; but they must have been somewhat astonished at the character of the trees in that grove. Fortunately for the writer's feelings the trees at this season of the year show no signs of greenness.

The spring this year is slightly less advanced with the close of March than at the end of the same month in 1879, nuch behind what it was in 1878, and considerably in advance of the average for a number of years previous to 1878.

[To be continued.]

[To be continued.] ----

UNUSUAL NESTING PLACTS.—Cleveland, O.—While out collecting hast year, I noticed a pair of robins building a nest. It was built on a trestle work of one of the railroads leading from this place, the nest being situated on one of the timbers, about eight or ten inches below the rail, over which each day ten or twelve trains passed.

on one of the unuese, the rail, over which each day ten or twenton.

Hero the robins reared their young.

A pair of chipping sparrows built a nest in a hanging basket which was filled with plants, and had to be watered every day. When the hady came to water it the bird would leave its neet, and return as soon as she left. The sparrows finished their nest and reared their young strates.

SEYM. INGERSOLL.

in this situation.

SERM. NOTES.—Our correspondent, "Webb." who writes from Nashua, N. H., under date of March 13th, says: The spring-like weather of last month has been succeeded by cold, stormy blasts, which have driven the "early bird" back to winter quarters. Bluebirdswere with us on the 22d of February; a wood pigeon was shot on the 22d—they are generally among the last to arrive; Phillips mounted a cedar bird which was killed on the 20th, and they are generally among our late arrivals. Robins were singing in the orchard on the 28th, and I saw crow blackbirds and chipping sparrows the same day. Poor birds! they had not seen Vennor's prophecies for March. The streams are all open, and a few ducks have put in an appearance. A flock of geese passed over on the first of the month; it is early for them, but a friend living in Central Vermont tells me he saw a flock of geese flying north the last of January.

Mr. Seym, Ingersoll, of Cleveland, O., contributes the following observations. He writes: I think we may say that spring is fairly open here, as the birds have begun to arrive. The following is a list of the arrivals that I have noted up to April 3d;

Feb. 10th. Saw two white-bellied nuthatch, one redheaded woodpecker and two yellow-hammers.

Feb. 16th. Saw several more red-headed woodpeckers.

Feb. 21st. Saw a rollin to-day.

Feb. 21st. Saw a robin to-day. Feb. 22d. Saw a number of bluebirds and robins. Feb. 24th. Saw a single flock of crows.

Feb. 26th. I noticed an albino robin, but could not get

Feb. 26th. I noticed an attino roun, but could not get him. Feb. 27th. Saw first meadow larks to-day. March 18th. Saw a large flock of ducks fly over. March 19th. Noticed a killdeer plover to-day; also several more meadow-larks. March 21st. Noticed crow-blackbirds, cowbirds, song-sparrows and Carolina doves to-day, for the first time this swing. this spring.

March 20th, Saw a flock of Carolina waxwings to-day.

March 26th, Saw a flock of Carolina waxwings to-day. March 31st. Saw à wood pewee this morning, also a kinglisher, some redwing blackbirds, a chewink and two logger-head shrike; a laso found a nest of the logger-head shrike, which was just finished.

April 18t. Saw several snipe.

April 3d. Saw a few cliff swallows, and noticed a pai

of robins nesting.

Panasites in the Malland.—Belleville, Ill., March, 1880.—I have just read with a great deal of interest the description of the parasite found in a mallard duck, I had the wing and a part of the breast of a mallard duck, shown me several weeks ago, infested with the

The duck was shot near here about four same parasite. weeks ago, and had the same appearance precisely as described by "Mic Mac."

Dodge.

RAYEN NEAR KINGSTON, ONT.—Our correspondent "Al," who writes from Kingston, Ont., notifies us of the recent capture of a rayen near that city. He says :

A friend of mine, Mr. W. Craig, living a short distance from the city, not long since shot and secured, on or near his farm, a splendid specimen of the raven. He has had it monited by Mr. Stratford, our city taxidermist, at whose shop it is on exhibition.

whose shop it is on exhibition.

NOTE ON THE BREEDING OF THE BLACK BEAR.—Boston, Feb. 7th.—The black bear.(Ursus americanus) brings forth her young in the Northern States and Canada in February. The period of gestation is eight months. At two years of age the female usually produces one at a birth, breeding every other year. The second litter consists of two, and when of mature growth sometimes three, and in one instance—well authenticated by the writer—four at a birth. When born the cubs are naked and very diminutive. About the tenth week their fur is grown and their cyes open. It is not unusual for the dam to leave her young for a brief time when the weather is very mild. On the approach of warm weather, in May, they leave the den in search of food, the dam placing her cubs on her back, where they cling and mestle in the long, thick fur. After this the cubs develop more rapidly in size and soon ramble by the side of the dam. When pressed by the hunter, or in danger she keeps her young in front, herself between them and danger, and when suddenly started sonds them to tree and takes herself off at a distance, especially if the hunter is on their trail.

CORPL. LOT WARFIELD.

CORPL. LOT WARFIELD.

WHITE JACK-RABBITS.—Carson, Nev., March 10th.—
Editor Foyest and Stream:—Your correspondent, A.
Lakes, writing from Como, Wy., who is certainly an intelligent observer, makes a grave error, and one which is apt. to mislead Eastern sportsmen, when he speaks of snow-white jack-rabbits. Now a white jack-rabbit does not exist, the jacks retaining the same color winter and summer. There is a species of rabbit in the Western country, however, much larger than the jack, which does become white during the winter months. This rabbit weighs from eight to ten pounds when full grown, and in this section is known as the mountain hare, from the fact that it is to be found only on the mountain sides, or now and then in the foot-hills. There is as much distinction between this rabbit and the jack as there is between the cotton-tail and the jack; and I repeat, there is no white jack-rabbit at any season of the year in any Western State or Territory, and such statements as Mr. L. makes, appearing in a reliable paper like the Forest And Stream, are calculated to lead many into grievous error, especially so when they originate from one who can use all the scientific names so readily. Siyah.

We regret to be forced to differ with a correspondent

We regret to be forced to differ with a correspondent who make such positive assertions as the above. theless we are obliged to take issue with him on the facts.
The so-called jack-rabbit of the plains and the Rocky Mountains (Lepus campestris) does certainly turn white in winter, "Sivad's" statement to the contrary notwithstanding. See Coues & Allen, Monograph of North American Rodentia.

The large hare referred to by our correspondent is very probably the pine or snow-shoe rabbit (L. Americanus, var. Bairdi).

var. Bairdi).

A TAME RUFEED GROUSE.—Worcester, Mass., March 15th.—As it is generally conceded that the ruffed grouse cannot be famed, I will give some facts concerning a bird of this kind. Near the village of Coldbrook Springs, Mass., are the mills and box factory of Mr. D. M. Parker, and near the mills is a tract of sprout land extending almost to the mills yad. In the fall of 1878 Mr. Parker first noticed a patridge (or ruffed grouse) about the premises. The bird appeared remarkably tame and therefore attracted his attention. He began feeding it, and it grew more familiar, until it would eat from his shoulder. He can call it as readily as any farmer can call his chickens; in fact, calls it in the same manner. Mr. Parker has never deprived the bird of its liberty, except on one occasion, whon he kept it in the basement of his house for a short time, but it did not relish confinement, and he let it go. It has, however, continued to stay about the mill. Many persons have visited his place to see this remarkable bird, and Mr. Parker is always ready to leave his business to show off his pet. Any one who is at all skeptical as to the truth of the above statement can call at the mills and see the bird take a piece of apple from between Mr. Parker's teeth.

Sportsmen generally pronounce it a female bird. It is, and always has been so far as known, a perfectly strong, sound and healthy bird. Can it too the fairly claimed.

Sportsmin generally probability as a temperature at a same and always has been so far as known, a perfectly strong, sound and healthy bird. Can it not be fairly claimed that this comes very near being a tame ruffed grouse?

E. S. K.

A very interesting case.

to the tide, so that, when the tide is rising, the water on the river side of the dam is several inches higher than the water on the other side, and flows through and over the loose stones quite rapidly, and the reverse is the case when the tide is falling. Vast numbers of minnows are to be found at all times in the marsh along the river banks, and as the tide rises they seek the runs to be found here and there to avoid the white and yellow perch which prey upon them, and it is while they are making up the creek that I catch the quantity I want. One day, while catching minnows as usual, I noticed a number of snakes, the common water-mecasin, approaching the dam or footway of stones. The water yet lacked several inches of reaching the top of the stoneway, although it was rushing in quite rapidly and carrying with it many bull-minnows and small white perch that were unable to resist it. Watching the snakes, I saw one after another reach the dam and take their station upon it, submerging themselves all but their heads, that were unable to resist it. Watching the snakes. I saw one after another reach the dam and take their station upon it, submerging themselves all but their heads, which were raised about an inch above the water and pointed in the direction of the incoming tide. In this position I counted seventeen snakes, arranged at unvern intervals, in a space of less than sixty feet. I came to the conclusion at once they were fishing, and watched them with a good deal of interest. Pretty soon I saw one head strike forward, going under the water, reappearing in a moment with a very large bull-minnow in its mouth. The snake immediately loosened its hold upon the rocks and swam for the shore, reaching which it disappeared in the bushes; and this was repeated at intervals by each of the seventeen snakes. When they returned from the bushes, having made short work of their "catch," each snake sought his own particular location on the rocks, there being no clashing of interests there.

Now, how is this for reason or instinct? How do these snakes know where to locate themselves, and the particular stage of the tide at which to start on their fishing excursion? How do they know that a number of minnows will be swept over the miniature falls made by the rocks? These are questions that go beyond my comprehension, and I leave them for others to answer. But the facts remain, and any one who will take the trouble may verify them at any time during the summer by a visit to Gravelly Creek.

Fish Culture.

THE BERLIN EXPOSITION,

ACROSS THE ATLANTIC. [From our Staff Correspondent.]

S school-boys we learn that three-fourths of this globe which we inhabit is water; the fact is stored away in memory's garret with other waste bits of intellectual lumber without a reference being made to it, or anything to recall it in a manner to bring it to the surface as an actual fact, until one sails for days and weeks without seeing anything else. An ocean trip has been written up so often and so well that any attempt to add much to it or to depict its vastness must result in failure still, the experiences of each one show that there are many things which cause trips to be remembered as distinct from each other-the ship, the fellow-voyagers, the cuisine, and, above all, the weather.

It was the writer's fortune to cross to England recently in the North German Lloyd steamer Neckar, which left New York on March 20th, with part of the goods to be exhibited by the United States at the International Fishery Exhibition, to be held in Berlin, and also with the delegation which was selected to represent our country at that Ichthyic congress, and from whom much information was derived by inquiring passengers concerning the importance of our fisheries, the extent of their opera tions, value, the culture of the food fishes, methods of capture, and much other valuable knowledge which, to one who had only considered fishes from the angler's point of view, was a series of surprises as to the vastness of the field and the thoroughness with which it has been worked by Prof. Baird and his assistants. The catalogue of exhibits, proofs of which were to be seen, will be large one, and covers what appears to the visitor everything which could by any possibility be made from a fish or could in any way be connected with it-from the hoats and implements of the angler and the fisherman to the literature of fishes and their culture-an exhibit which cannot fail to be both a credit and an advantage to our country.

The other passengers were an exceptionally good lot, as passengers go, in both cabins, not a man being scen A very interesting case.

**Syake Eating Fisit.—For a number of years past it has been my custom, because unable to find any better way to dispose of my summer leisure, to do a good deal of lishing in the Potomac River, sometimes in the immediate front of the city, sometimes at the Little and Big Falls above, and sometimes at the Four Milo Run below. I have generally used live-bait, there being minnow in any quantity along the edges of the river. Three summers ago I went to catch minnows at the mouth of a small run called Gravelly Creek, situated on the west bank of the river, just at the foot of the Arignon estate. A short distance north of the run is the one quite celebrated Arlington Springs, which is still a place of resort for large numbers of Sunday visiters from the city. To reach the springs, except by boat, it from the city for large numbers of Sunday visiters from the city for cross Gravelly Croek near its mouth, a passage-wey has been made by a kind of loose and of stones. At at full tide it is fully sixty feet and four or five feet deep, The loose stones form quite an impediment drunk on the voyage, a thing which old sea travelers will

without dinning more than a small parties of his costsleeve in your soup is, without doubt, an inherited peculiarity to be accounted for by the fact that the longestarmed second-class passenger in the Ark got the most pepper, and his descendants waxed long of limb and far of reach, crowding out and displacing their shorter-armed fellows, and so have developed a race which when in want of pepper are capable of entirely depending upon their own resources.

The monotony of the trip was broken on the third day out by the discovery of the cabin of a vessel, which told of a wreck, and two hours later we picked up a small boat containing eleven men and a dog, who were the entire crew of the wrecked bark Ophic, of Mirimachi, N. B., with grain, from Philadelphia to Belfast, which went down in a gale on the 21st. Two nights in an open boat, with the spray souking their clothing, had chilled them until they had not strength sufficient to enable them to climb the ladder without the assistance of a rope under their arms; and on gaining the deck but few could walk, while on reaching Southampton a week later the colored cook and another were left in the hospital.

The weather was very pleasant throughout the voyage. and for the five days before reaching Southampton the great ship moved as steadily as a river steamer, so evenly that the water in a tank belonging to the Fish Commission, which was designed to be a sort of self-acrating arrangement, by means of the rolling of the ship causing certain sponges to be first under and then out of water, declined to act at all, and a mere trembling of the surface of the water in it was the only sign of its being in motion. This tank contained some curious creatures, besides many fish, which although our own countrymen (2), we passengers are not at all familiar with, nor is their appearance such as to make one desirous of further acquaintance. The Professors have names for them, which may be correct for all that I can say to the contrary, but such names! There is no need to try and give them, for a slip of the pen would betray my ignorance of scientific nomenclature, always supposing that my memory had firmly grasped them. These beasts are to be shown in the class of "Enemies of Fish and Fish Culture"—a fact which serves to illustrate the assertion made before, that there was a complete collection of everything relating to piscine life, growth and development, whether it may le beneficial or hurtful; the Neckar having thirty tons of material on board for the exhibition, with more to follow from New York, which was only a shipping point for a small portion of the goods, the most of them having been taken by ships of this line from Baltimore. These sccalled tons are computed by measurement, however, much of the exhibit being in the form of large and light articles, which are boxed, the boats being especially large in proportion to their weight.

This exhibit seems to thoroughly awaken the interest of every one who hears of its extent and character; it is the most novel of all exhibitions, that of the fishery industries of the world-certainly one that is of the greatest importance to our people, but which has been ignored or slighted for so long a time that few persons have an idea of its value beyond the fact that we paid five and a half million dollars last year for the privilege of fishing on a small portion of the North American Coast.

Sea and Bivey Hishing.

FISH IN SEASON IN APRIL.

Speckled Trout, Salvelinus fondinalis; Land-locked Salmon Salmo aboveri: Sand-is

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of ame and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; Means of necess; Hotel and other accommodations; Game and its Sensor; Fish and its Season; Boats, Guides, etc.; Name of person to address.

"THE NIPISIGUIT AND METAPEDIA."

Editor Forest and Stream:—
In the issue of April Sth of the Forest and Stream a criticism appears upon an article of mine under date of

E Having been there, and also having seen the woods several times in the last twenty years, and having invariably kept a diary and a record of every penny of expense, I thought I knew whereof I wrote. Lean, at all events, give the reason of my faith and regarding the question of

Manhattan" says the streams are leased in part, and the residue is open to "a great crowd of anglers, good and bad, and no sport nor pleasure to myone."

My article did not refer to sections of rivers "open to all." but otherwise, as I wrote, "Permits necessary; charges usually one dollar per day per rod." Fire fishing is usually not worth the waste of time, while all good fishing is under lease; hence, as the Restigouche Division to which I referred is under lease; it is on an equality with all salmon fishing in Canada, and as good as any, and better than many, and is not more crowded than other good streams, nor so much crowded that good fishing may not be had.

In the summer of 1877 I had the pleasure of conducting a small party to the Restigouche.

ing may not be had.
In the summer of 1877 I had the pleasure of conducting a small party to the Restigouche. We arrived June 1st

and spent just one week there. We, however, devoted but a portion of two days of that time to salmon, and although none of the party had ever captured a salmon before, we bore away seven nice salmon. The largest weighed thirty-five pounds, three weighed thirty pounds each, two weighed twenty-five pounds each, and one fit-een pounds. During that time only two other salmon fishermen put in an appearance (and they old habitues of five place), and they captured more than a dozen each while we remained. Mr. Fraser, of the hotel, has a lease of six miles of the best part of the river and keeps it exclusively for his guests, and "crowds" do not spoil the fishing here.

Now regarding expenses. I wish it borne in mind that I am talking of "cstimated necessary expenses for two weeks' trip from Boston to Restigouche," as per my previous article. In this I do not include rods, etc. Nor, from my own experience in the woods, do I suppose that one will fish all the time for salmon. There is good trout fishing, with sight-seeing to be done, which cost less than salmon fishing, which is itemized in my list, and foots §6.50 per day.

my lirst, and foots \$6.50 per day.

Now, as to expenses, 1 give just what our party paid in fact, and all statements are based upon experience:—

| Fare-Boston to Restigouche and return | same | way, | or | via | |
|--|------|------|----|-----|----------|
| Onchae | | | | 3 | 831 - 50 |
| Gleaner Reston to Bangor | | | | | 2.03 |
| (flows monte first day | | | | | 1.50 |
| Curnor todering and breakfast at St. John. | | | | | 2.50 |
| The second words and indefine second day | | | | | 2.50 |
| eig Jave' colmon fishing, hoard, etc26.50 | | | | | 39.00 |
| Two Sundays (making ten days) | | | | | 4.Ut) |
| Four days more, at \$2 (board) | | | | | 8.00 |
| Sleeper, two nights returning | | | | | 4.00 |
| Dicchest and and | | | | | |
| | | | | | 205 00 |

Now, I know whereof I affirm when I say one can make a comfortable trip to Restigouche from Boston for \$100 even money: but as I know how prone one is to spend money when he "goes a-fishing." I gut the estimate at \$150, so that a little indulgence in cigars, etc., might be allowed. The train leaving Boston at 7 P.M. is the one to take; you then reach St. John next night about 6, and resume the following morning at 8 A.M., and stopping over at some convenient place for the night, reach letts pedia at 9 A.M. the next morning. There are no expenses of note except as given, but for incidentals one may add what he pleases. If you stop off at Nipisiguit or Miramichi, and go up river, you will have carriage hire to pay, but if you have a party of four an item of \$2 per day is ample to cover it. My estimate of \$150 leaves a margin broad enough for anyone to go into the woods with, who is not, or ought not to be, under a guardian.

I can now give an estimate for any trip almost in this country. I have noted it carefully for twenty years, and been surprised at its accuracy. "Drummers" will agree with me generally, i. e., \$7 per day from time of leaving home till you return will almost invariably cover necessary expenses of a two to four weeks' trip, or longer. I tested it among the White Mountains, among the Catskills, in Canada, at Niagara Falls and elsewhere. It's much better than guess work and "doubling."

West Meriden, Conn., April 13th.

Our correspondent's practice of keeping an itemized

West Meriden, Conn., April 13th.

Our correspondent's practice of keeping an itemized record of routes, fares and expenses is an admirable one, and at once stamps his information as reliable and practically useful. A former paper by Mr. Fay, giving the itinerary of the Rangeley Circuit has been highly commended by those who are familiar with that country. We need hardly suggest that this plan of a daily record is worth adopting by others, nor to hint to our friends that the FOREST AND STREAM is always glad to get hold of just such records for the benefit of its readers.

of just such records for the bencht of its readers.

New Brunswick.—Millionn,FortSlevens.—I am afraid you may think it a repetition to say anything m your "Fishing Directory" about our little salmon at Grand Lake stream, as most all your experienced fishermen know all about it. The best way to get there is by the International Steampship Co., from Boston or Portland, now running twice a week; in summer three times. Very fine boats go near the land, so you have a good view of the coast. Fare from Boston to Calais, about \$5; from Portland, about \$1; state-rooms, extra, which should be engaged ahead. Connect at Eastport with river boat for Calais; then cars to Princeton, twenty miles, and little steamer to stream. Or can come to Calais by cars, paying twice as much money, and having twice as much discomfort; time, about the same from Portland. Write to W. G. Rose, Lake House at Princeton, Me., or Mr. David Dresser, who will engage Indians and cances if they are wanted. Good accommodations at the stream, or can live in tents.

G. A. BOARDMAN.

New York.—Fine trout fishing can be had at Delhi, Delaware County, N. Y. Delhi is reached from New York Gily by the New York and Oswego Midland Railroad. It is a seven-hours' ride. Good ruffed grouse and squirrel shooting can be had in the autumn. There are also a few woodcock and lots of foxes. Good board can be had at very reasonable rates at the Edgerton House, C. B. Griffis, proprietor.

The Adirondacks.—Saranae, Region, April 16th.—
The weather continues still very cold for the season. In
the woods the snow is still quite deep. The lakes are stilcovered with ice, and the prospect is that it will not disappear until about the first or second week in May. I
will inform you when it does, that those very anxious
ones may appear here armed and equipped for trolling.
The prospect for good trouting is highly favorable, as but
few trout have been taken during the past winter, owing
the increasing regard for the law—and I might ado and I might add

few trout have been taken during the past winter, owing to the increasing regard for the law—and I night add fear lest justice should proclaim its power.

I understand that several of the old sportsmen who have visited here for many years have engaged their guides, viz.: Mersrs. M. & T., Col. H., Dr. K., Rev. W. L. B., Mr. H., of New Jersey, and party, and others. The FOREST AND STREAM is always a very welcome visitor, every issue overflowing with interest.

S. S. N.

Westchester Trout Fishing.—There is good troufishing in some of the streams about Bedford, Croto Lake and Mount Kisco, in Westchester County. B_n^{\dagger}

writing to Mr. I. Flewellin, Croton Lake, New York, par-ties can secure all desired information, or, by going directly there, will be well entertained and guided to the fishing grounds.

VIRGINIA.—Norfolk, April 16th.—Two men who were engaged in fishing on Dumpling Island, in Nansemond River, caught a rock-fish last Thursday five feet long, sixten inches in diameter, and weigning seventy-five pounds. In going in the fike he got half-way in the mouth of the net, and could not get in or out. They had to run a rope through his gills and mouth, and then it took two men to manage him.

MINNESOTA, -Owatonna. - I caught my first black bass MINNESOTA.—Ovadonna.—I caught my first black bass of the season yesterday, April 14th; very high wind; fished about one hour; took four, the largest weighing four pounds, twelve ounces, the smallest, one and three-quarter pounds. No pickerel biting as yet. The bass pay no attention to minnows. Caught them with a Conroy spinner at head of mill-pond on Straight River. Have caught perch sixteen inches long in same water, Fish plenty.

"Indiana Black Bass Fishing.—Warsaw, Ind., April 14th.—To those desirous of finding black bass in abundance, and who wish to try their skill in Indiana waters, the beautiful little city of Warsaw offers many attractions. It is on the Pittsburg, Fort Wayne and Chicago Railroad (Fennsylvania line), 108 miles east of Chicago, and 350 miles west from Pittsburg. There are four very pretty lakes within fifteen minutes' walk from the hotel, and one, Center Lake, bordering on the limits of the town. Eagle Lake, one-half mile from the city, teems with pike and black bass, and of such large size as to quicken the beatings of a true piscator's heart. Mr. Geo. Greene, proprietor of the Kirley House, will take especial pains to provide all parties with necessary boats and guides, and minnows can be obtained at reasonable rates. The bass season opens May 1st.

THE NEW YORK DOG SHOW.

THE ENTRIES CLOSE WITH 1,108 DOGS IN THE REGULAR COMPETING CLASSES, EXCLUSIVE OF ENTRIES FOR PUPPIES IN LITTERS.

HE fourth annual dog show of the Westminster Kennel Club, to be held at Madison Square Garden (late Gilmore's) on Tuesday, Wednesday and Thursday, April 27th, 28th and 29th, will surpass in point of number and excellence of stock anything ever before held in this country. The entry books, which closed on the evening of the 12th inst., show that 1,108 dogs have been entered for competition, not including between one and two hundred puppies in litters, which will be shown with their mothers, and nine pointers of the Westminster Kennel Club, not for competition.

Although the total number does not reach the predic-

tions of Mr. Lincoln, yet it is so far in advance of all pre vious exhibitions of the kind that the result must be highly gratifying to the managers, who have left no stone unturned to make it a success in every way.

To enable our readers to see at a glance the increase and falling off of entries in the separate classes between this show and its predecessors, we annex a classified table of the comparative entries for 1877-78-79 and 80. Before drawing our own deductions, however, it will perhaps be best to give a brief recapitulation of the number of classes with actual entries and total number of dogs included in them of each year; these have been compiled from the official bench show catalogues, checked at the shows of each year, and also from the files of the FOREST AND STREAM :-

First show, 1877-Seventy classes, embracing 864 dogs. Second show, 1878—Eighty classes, embracing 824 dogs. Third show, 1879—Eighty classes, embracing 948 dogs. Fourth show, 1880-Seventy-four classes, embracing 1,108 dogs.

In 1877 we find from the entry books that there were six classes for Gordon setters and two for native black and tans, or black, white and tan setters. As the subsequent shows only classify black-and-tan setters, we have pooled the two above-named classes under the one headng-"Gordon or Black-and-Tan Setters." The Blenheim, King Charles or Japanese classes we have as far as possible separated, and omitted in all the years mention of all classes in which there were no entries; these were as follows: In 1877 the Black-and-Tan Terrier (exceeding eleven pounds weight) Class, in 1878 the Bloodhound and Field Spaniel Bitch classes, in 1879 the pointer puppy bitch (under six months), champion red and white setter bitch, Chesapeake Bay dog and bitch, and Blenheim spaniel, dog and bitch classes, and in 1880 the Blenheim, or King Charles dog and bitch class. But the present year includes the silk-haired terrier, excepting Yorkshire class, which was added to the premium list after the printing of the distributing books, the prizes being for best dog or bitch \$10, and for second best a silver medal. This class has never been opened before. We also have not included in the table the pointers of the Westminster Kennel Club, as they have been entered "not for compe-For 1878 the catalogues show nineteen entries, for 1879 nine, and the same number for this

The first year of the show was the only one in which there were imported English setter puppy classes for both dogs and bitches, and imported and native red Irish setters, dog, bitches and puppy; staghound, poodle and trick dor classes.

In 1878 the St. Bernards were divided into two classes. rough and smooth coated, and the imported and native English setters were judged under one heading, as were also the red Irish setters. The spaniels were separated into classes of the different breeds, and many classes were opened for both dogs and bitches under their respective headings.

In 1879 the red Irish setters were divided into two classes, namely, red Irish setters and red and white setters, and the imported and native English setters still remained under one heading.

We now come to the present year, which we consider has the simplest classification yet arrived at. The English setters have again been divided into imported and native classes; the red dogs of the previous year are to be found bunched together.

Referring to the account of the first show, given in the FOREST AND STREAM of May 17th, 1877, we see that "the actual entries, including specials, were 1,195, and allowing for puppies and collections covered by single entries. there were probably 1,200 animals on exhibition," In the next year, as shown, there was a falling off in the entries, but the interest revived again during last year, as there was a large increase in the total list, and particularly in the sporting class, which is shown in a carefully prepared table further on. The decrease in entries for 1878 was mainly due to the number of diseased dogs exhibited in the initial show, and this would point to the necessity of not only a thorough but a competent examination of every animal that is sent to the Garden of this year, as the dog-owning public cannot be expected to enter its valuable stock if it is not to be in every way protected. Last year the managers having found this out, took every precaution against the entrance of animals suffering from either mange or distemper, and we have reason to believe that the same systematized precautions will be doubly in force this year.

The Forest and Stream of April 3d, 1879, in its concluding remarks regarding the last exhibition, says that "it was an unprecedented success in the annals of the dog shows in this country, and as far as the sporting classes were concerned the number was believed to be greater than had ever been shown in England,"

The following is a recapitulation of sporting dogs en-

| tered in this and in previous sho | ws : | | |
|---|-------------------------|--------------------------|--------------------------|
| Pointers | 1878. 83 | 1879. 128 | 1880. 135 |

We believe that the above needs no comment, the only We believe that the thore needs no comment, one only item really calling for particular attention being the entries in the English setter class; this is found to be a large increase on previous years, which is mainly due to the opening of a separate class for native dogs.

As we propose giving a full description of this interesting exhibition in subsequent issues, we have decided not to allude further at this time to the individual entries, we have found the proposed of them as expecting we have seen.

ing exhibition in succeedant issues, we have use and the colline for the all this time to the individual entries, until we can speak of them as something we have seen. It may, however, be interesting to our readers to state that the entries are from almost every State in the Union, including New York, New Jersey, Massachusetts, Maine, California, Missouri, Illinois, Ohio, Indiana, Kentucky, Maryland, Pennsylvania, Virginia, North and South Carolina, Delaware, Rhode Island, Connecticut, Michigan, Wisconsin, District of Columbia, from England and Ireland, and from the following points in Canada: London, Toronto, Montreal and Chatham.

The two foremost competitors for the special to be awarded for the largest and best collection of animals owned and exhibited by one person or club, are Mr. A. E. Godeffroy,

of Guymard, N. Y., who sends twenty-six, and Mr. A. H. Moore, of Philadelphia, whose contribution aggregates twenty. The arrangement of the Garden will be entirely differ

twenty. The arrangement of the Garden will be entirely different from that of former years. There will be no stalls around the outer edge of the floor. Six double rows will be run the entire length of the building, beginning at the rows of pillars at either side, except that space enough will be left at the Madison avenue side for a large oval ring, in which the sporting classes are to be judge1, and a broad asise through the center from Twenty-sixth to the Twenty-seventh street side. The aisles between the stalls will be ten feet wide, and that around the ellipse thirteen feet wide, which will give ample room for spectators, and at the same time enable the managers to provide for all the dogs on the floor. A platform for the judging of the non-sporting classes will be erected in the recess formerly occupied by the cascade. Where the soda water stand formerly stood Mr. A. E. Godfroy will have a house twelve feet square, containing stuffed specimens of all the game birds and fur-bearing animals of America. In it will also be exhibited four otter-hounds now on the way from England, and the first ever imported to this country. The wants of the dogs will be looked after by forty-three attendants, who will be uniformed in white caps and brown hunting coats. Many of the exhibitors have announced their intention of draping their stalls handsomely. The Garden will otherwise be decorated with flowers and pictures, and will present an the exhibitors have announced their intention of draping their stalls handsomely. The Garden will otherwise be decorated with flowers and pictures, and will present an attractive appearance. An entirely new set of stalls has been contracted for. They are now being constructed. The carpenters will begin putting them up a 11 o'clock on next Saturday night, and the work is to be completed at midnight on Sunday. By Monday night, all the dogs from a distance will be housed within the building.

POINTS IN JUDGING.

FOLLOWING are the scales of points for judging each C class. We republish them for the convenience of visitors at the show, who may wish to judge for themselves the comparative merits of the dogs on exhibition next week :-

MASTIFF.—Head, 20; eyes. 5: ears, 5; muzzle, 5; neck, 5; shoulders, 5; loin, 9; chest, 7; legs, 5; feet, 5; color, 5: cont, 5; symmetry, 10; stern, 5; size, 5. Total, 100.

MARYLAND FOX HUNTING

CLARKSDURG, Md., April 13th.

IN no State in the Union is fox hunting enjoyed to such a degree as in Maryland. A number of clubs have been formed and are steadily on the increase. Especially are the Baltimore, Howard and Anna Arundel clubs popular, their meets being looked forward to with great it terest, especially by the ladies, who take great delight in following the hounds. The first regular meet of the Montgomery Club since the receipt of their chlu uniforms, which by the way are quite handsome, consisting of red coats, white pants and top boots and blue riding-cap, came off last Saturday in Pleasant Valley, midway between Clarksburg and Darmascus.

By 10 'clock over forty members of the club had arrived on the grounds, accompanied by fadies, who desired to participate in the classe, which has been the theme of conversation for the past week. Several hundred spectators were present by invitation of the club.

The pack of dogs amounted to about forty; the most of them had arrived the day before and were confined in a large tobacco house, presenting a lively and attractive appearance. Some splendid specimens of the rish hound were noticeable, especially Hot and Buck, owned respectively by S. T. and J. F. Williams. These dogs are veterans in the chase, and are well known to the lovers of this sport as reliable and faithful footers.

The Burdettes introduced a splendid pack of twelve, including Speed and Fannie, by Carl Burdette; Seot and Bell, by Thos. A. Burdette; Charmer and House Carroll, by Basil Burdette; Bell and Forman, by Morton Burdette; several by John Ed. Burdette, Dr. Burdette and Dick Austin, showing some fine specimens of the English fox hound, and exhibiting in the run fine points during the day.

Mr. George Pope's entry of four, were noticeable for

the day.

Mr. George Pope's entry of four, were noticeable for

Mr. George Pope's entry of four, were noticeable for their clean and shapely appearance and staying qualities; also James King's and Clem. Barbour's pack of five, that gave evidence of being thoroughly acquainted with the requirements of the occasion.

The fox was a splendid specimen of the red Reynard family, which was captured about ten days previous by Carl Burdette on Ten Mile Creek, near Boyd's Station, Baltimore and Ohio Railroad, and preserved for this occasion.

Battimore and concasion.

When the horn was sounded and the hunters assembled on the open plateau, facing "Parr's Ridgo," and enabling all to see the start, the fox was given his freedom in the open meadow, and soon gave evidence that his late capitivity had not caused him to forget his usual cunning thirty had not caused film to forget his usual cumming ad advoitness. After running a short distance he crossed the stream of

After running a short distance he crossed the stream of water that forms the head of Big Seneca and noved up the slope of the hill leading through the orchard, and finding that he was not pursued, he stopped and took a long survey of the surroundings. The outlook proving satisfactory, he indulged in a good roll and then started for cover in the direction of Clarksburg. It had been decided to give him a half hour start before turning the dogs loose, allowing him ample time to recover from his late confinement and get a good start.

The riders mounted and the dogs were released from their confinement, and immediately took the trail, filling the air with their musical notes as they bounded along over hedge and fence.

The members of the club and invited guests and horsemen joined in hot pursuit; owing to a break in the dogs,

The members of the club and invited guests and norse-men joined in hot pursuit; owing to a break in the dogs, the company parted, and some of the best riders were deceived by a false dog, and were thrown entirely out of the run. But to those who had horses equal to the task and took the low scrub oak on the north side of the ridge and rode close up with the leaders, the run was a fine

The fox made directly for his old haunts on Ten Mile The fox made directly for his old haunts on Ten Mile Creek, crossing the Frederick road, just below Clarksburg, and giving a line view of the clase from Shaw's Hill. Sir Reynard seemed to realize the grandeur of the occasion, and atthough closely followed by the dogs he succeeded in doubling on them and took the back track, when Booze, owned by Col. Boyd, and a recent importation from the kennel of Lord Bateman, of the Royal Humtsman Club, "took the foot" and opened on the back track, where he was met by the return of the dogs on the false scent. Those who had followed the footer sounded their horns and gave their misguided friends the genuine start.

He was so closely pursued by the dogs that he doubled by Gus well, and crossed above Clarksburg on the Frederick road, through the grounds of Ton Anderson's machine shop and through John Lewis' farm, closely followed by the dogs through Mr. Edward Waters' farm two miles below Clarksburg on the road to Boyd's, when two miles below Clarksburg on the read to Boyd's, when he was compelled to take refuge in a hollow tree on the place of Mr. Edward Waters. Here the services of Tom Snowden, the champion colored fox hunter and keeper of the hounds, was brought into requisition with his axe. Tom delights to follow the hounds and be in at the death. Tom soon brought down the tree, and Sir Reynard was again transferred to the lock. So hard was he pushed by the dogs that he had encroached upon the rights of a large raccoon, which was confiscated and added to the spoils. After a run of thirty niles, in which were many who started in the morning fresh and eager for the sport, but who had found many a mishap on the way, they assembled at the residence of Col. Boyd, where the toils and excitements were remembered in a social banquet provided for the occasion.

Col. J. H. S. Boyd.

HALLOCK'S DOG FANCIERS' DIRECTORY AND MEDICAL GUIDE. -Mr. Chas. Ifallock has prepared a timely little book of the above title, designed for the convenience of dog owners. It comprises, first, an extended list of the principal owners of dogs throughout the country, with

compact descriptive notes on the various breeds. The Medical Guide, which forms the second part of the book is a model of conciseness and clearness. It aims to treat every ill that dog flesh is heir to, and is evidently written by one who has had practical experience in the treatment of ailing dogs. The chronological table of American bench shows is especially timely, and will be found of interest by all who visit the New York Dog Show. New York: Orange Judd & Co. Price \$1.

The Orango Judd Company publish a new and enlarged edition of their book, "The Dogs of Great Britain and America." Every dog owner should have a copy,

Double-Swivel Dog Chain for the Dog Show. Double-Swivel Dog Chain for the Dog Show.—We have just been shown by Henry C. Squires, No. 1 Cortaindt street, an excellent chain which he had manufactured expressly for the Dog Show. It has not only two swivels, but a spring-hook at each end, and three rings in the chain, so that it can be shortened to any suitable length. This chain is a wast improvement over the ordinary bar-chain, which is liable to kink and become unfastened. Supt. Lincoln tells us that he is occasioned a great deal of trouble on account of dogs working themselves loose, and would be pleased if all exhibitors would use something of this kind.

Pennsylvania Field Trials.—Wilkesbarre, Pa., April 15th.—Editor Forest and Stream:—At the instance of the Advisory Committee on Pennsylvania State Field Trials, I would give notice to all Pennsylvania sportsmen, readers of your paper, that at the next meeting of the Pennsylvania State Association for the Protection of Game and Fish, to be held at New Brighton, Pa., in June, the subject of having a field trial exclusively for dogs owned in Pennsylvania will be taken up, and all sportsmen having an interest in the matter are requested to be present, and those clubs sending delegates to the meeting of the State Association are requested to instruct their delegates as to the action they desire in the matter of a State field, trial.

B. F. Dorrance, Chairman.

CRUDE PUTROLEUM FOR MANGE,—Missouri Valley, Jova, March 30th.—In your issue of March 25th I note a communication from "Hemlock," of St. Leonard, P. Q., in which he states his experience of applying crude petroleum for mange. I being the first one who advised the use of this oil, will tell how I came to find it out. Nearly four years ago, while hunting in the woods surrounding Titusville, Pa., I was accompanied by my cocker spaniel, who at that time was troubled with the mange; his whole back was one sore, minus hair. In my travels I came to an oil well—one of the many which can be seen near Titusville. My dog kept his back sore by constantly rubbing on the ground or against a tree. I cannot tell what induced me to do it, but I went to the oil-tank, and with a broad chip I saturated my dog's back with the oil, and am happy to say that inside of ten days the sere back was heated, and the hair came out thicker than ever. Do not use kerosene, as it contains an acid, but use the oil just as it comes from the wells. I would be glad to hear the experience of others.

G. H. W.

CURL FOR "SALMONEP" Does.—Doutton, W. T., March
ad.—Editor Forest and Stream:—I have lived on the
North Pacific Coast over twenty-five years, and have lost
several valuable dogs by their eating salmon. As to the
reason why, I offer no theory; but I do know that a small
piece of healthy salmon will kill a dog as sure as a dose
of strychnine, if nothing is done for him. The Indians
accustom their dogs to it by feeding it in small pieces
when they are young. I have tried almost everything
for a cure, but never found anything that would do any
good until about a year ago, when my setter got "salmonted!" and a friend told me to give him ead oil. I
gave him an onnee to begin with, and gave him about
luif a dozen doses. I could see a change for the better
from the first dose. In a few days he was all right. I
have seen it tried several times since, and never knew it
to fail. Any one having a dog "sulmoned" would do
well to try this. I believe it to be almost a sure cure.

A SAGACIOUS TERRIER—Pittsburg, Pa., March 28th.—Editor Forest and Stream:—The story, in a late issue, as cited by John Quincy Adams, about Whiteomiand his dog Pincher, finding his way home from Leipzig to Berlin, brings to mind a very similar case, to wit:—Some years ago a widow lady living in our city owned a store, and among the effects was a Soctot terrier; she concluded to sell out and move to the country, some forty miles from the city. In moving her household goods, she took the dog with her; first traveling thirty miles by railroad, then in a wagon some twelve miles. After her arrival, for the first few days, the little dog was about as lively as usual, but after a week or so began to mope ground, refuse to ear, and had all the appearance of disappointnent and home-sickness. Finally ho disappeared, Of course no one knew where he had gone, and he was given up for lost or dead; but lo, and behold, some two weeks after his disappearance. 'Little Scotchie" turns up one morning, stiff and care-worn, at the store. In a few days he regained his strength and vivacity, and seemed perfectly delighted to get back to his home, where he renained until his death.

Now it has always been a mystery to me how the little fellow found his way back. It could not have been by scent, for he was carried all the way, and from his careworn and starved appearance must certainly have walked the entire distance.

A Constant Reader.

the entire distance. A CONSTANT READER,

IMPORTING Dons.—Editor Forest and Stream:—By the misplacement of a period in a recent letter your types have made me say, "I do not advise anyone to import." The sentence should have stool thus: "Fointers and setters I do not advise anyone to import," and my reason for making the remark was that, in my opinion, your American sporting dogs are justes good as our English, with the exception of hounds of any kind, and terriers. Any information regarding the importation of dogs I will be glad to give while in New York, and I dare say I shall be heard of at your oflice.

GORDON STAELES,

KENNEL NOTES.

Sales,-Lollie-Mr. J. J. Jordan, Winchester, Va., has pur-chased from Mr. Henry W. Livingston, New York, the lemon Bel-ton Llewellin setter bitch puppy Lottic, by Loffy, out of Maud

NAMES CLAIMED .- Rake-Mr. F. C. Plaisted, of Lincoln, Me claims the name of Rake for his black, white and tan dog puppy whelped Jan. 27th, 1880, by Lelaps (No. 150, N. K. C. Stud-Book).

whether Jan. 21th, 1836, by Leippi 180, 139, K. K. C. Stune-Books, and of Starlight (No. 513).

A team composed of Havens, Otey, Cadman and Bush would give our crack clubs some trouble at the National Meeting. Hope they will come.

THE LITERATURE OF ARCHERY.

No pastime is so difficult to learn as archery. To attain to any degree of profesency with the bow requires not only much practice with the archer's weapons, but much study of archery as a seclence. There is a great ideal of archery literature, however, which is not only valueless to the earnest student, but positively injurious. Hansard's "Book of Archery" contains a vast mass of legendary trash, but not one word which will assist an archer toward the mastery of his refractory gear. So with the treatises of Mr. Roberts and Mr. Waring. In truth about the only books which contain any really valuable hints to the archer are Mr. Ford's "Theory and Practice of Archery," Mr. James Sharpe's "Our Modern Archers," Mr. Maurice Thompson's "Witchery of Archery," and the work cattlied, "How to Tratu in "Witchery of Archery," and the work entitled, "How to Train in Archery," by Mesers, Maurice and Will H. Thompson. If the beginner will supply himself with these works, and carefully adapt his practice to the rules therein laid down, he need not remain season after season at a stand-still, happy at the achievement of season after season at a stand-still, happy at the achievement of some accidentially acquired scores of mediocro merit, but may confidently expect to advance to the front rank of archers with rapid strides. Of course, there can be no great advance without pattent practice, but practice only is a slow way of working out a knowledge of a crafts of difficult as archery. In any art or craft it is always infinitely more difficult to achieve success by blindly groping in the dark, feeling the way by experiment, than to follow the clear pathway blazed by the veteran guides who have thoroughly explored its every mystery.

thoroughly explored its every mystery.

Mr. Ford's book has been out of print for many years, and he and the spots may been under the spots of th edition issued in England, containing not only the full text of Mr. Ford's book, but also exact copies of all the illustrations and an appendix of American notes. We understand the reprint will be sold for \$1.50, and every American (Zoxophilite should have the the soid for \$1.00, and every American Toxophine should have the book. Mr. Horsman, who issued the work of the Messrs. Thompson, "How to Train in Archery," will issue in a few weeks a second edition of the work greatly enlarged by the cellifon of two chapters, one on "Aiming," and the other, a most valuable one, giving all the secres by which the National Medals of Great Britain] have been won since the foundation of the National

Archery Society in 1814, up to and including the year 1879, to gether with the names of the ladies and gentlemen winners, and the places where the meetings were held. Also a list of all the scores of 1,000 and over ever made at a public meeting in Great scores of 1,000 and over ever made at a public meeting in Great Britain, by rentiemen shooting the double York Round, and all scores of 7,00 and over ever made by laddes at the National Round at any public meeting. And to these nor added a large number of the best practice scores ever made by archers of Great Britain and America in private shooting, at all the ranges from thirty to one hundred yards, including the best private practice of Ford, Brauhall, Moore, Fisher, Rimingion, Palaiter, A. Le Clare, G. E. S. Fryer and others of the best shots among the the gentlemen of Great Britain, and practice scores of Mis. Horne blow, Mrs. Butt, Miss Betham and other notable lady shots! Among American scores are given the best records at all ranges Among American scores are given the best records at all ranges of the two Thompsons, Frank C. Harens, L. L. Peddinghaus, O. W. Kyle, Ford, P. Hall, H. C. Carver, Edwin Devol, Dr. Weston and many other leading Toxophilites. Such a chapter is very valuable to every situdious Toxophilite, and it certainly should add much to the already large sales of the book. Mr. Sharpo's book, "Our Modern Archers," Is a vory valuable one, piving the archer a good idea of the style and accuracy of all the more illustrious bowmen of Great Britain. The more such literature is studied, the greater will be the skill of our archers.

HIGHLAND PARK ARCHERS - Highland Park, Ill., April 7th -Highland Park Archens—Highland Park, Int., Apr. 10th— The Highland Park Archers recently held their annual business meeting, adopted a new constitution, elected officers for the ensuing year, and transacted considerable important business; so ensuing year, and transacted consideration important obsidess; so the archery seaton has fairly opened. The following officers were elected: President, Dr. E. B. Weston; Vice-Presidents, Mrs. H. C. Carver, Mr. R. J. Street, Mr. G. D. Boulton; Corresponding Secretary, Mr. H. E. Swartwout; Recording Secretary, Mrs. N. E. Swartwout; Treasurer, Mrs. W. S. Lasher; Field Capitain, Mr. H. C. Carver; Ersentive Committee, Dr. E. B. Weston, Mr. William M. Carlother, Wr. O. W. Erley.

Ham M. Goodridge, Mr. O. W. Kyle.
The society will hold its first (arget day April 27th, when members will compute for prizes at the club rounds. These rounds are: For ladies, 24 arrows at 49 yards, and 48 arrows at 50 yards; and for gentlemen, 24 arrows at 60 yards and 45 at 50 yards. This field on Target Day promises to be a very successful, one, and a full report of it will be sent to the Forest and Stream.

EASTERN ARCHERY ASSOCIATION .- The annual meeting of the Eastern Archery Association will be held at the Reyere House, Boston, Wednesday, April 28th, at 12 o'clock.

Gricket.

THE CANADIAN ENGLISH CRICKET TEAM.-Just as We are going to press, we have received a letter from Mr. H. Miller, secretary of the Northwestern Cricket Team, giving us the names of the fifteen players who are going to England on the cricketing tour; they are as follows: Messrs, F. W. Armstrong, J. L. Hardman, J. L. Gillean, J. Howard, Rev. J. D. Phillips, R. W. Hibbard, E. Kearney, J. Dewherst, G. F. Hall, T. Dale, J. Smith (Ottawa), T. Jordan, W. Pinkney, C. J. Logan and A. L. Trcloar, with Mr. Miller as secretary and umpire. Another match has been arranged, namely, with "Lord Harris' Team," on the 16th, 17th and 18th of August.

REVOLVING IN CRICKET.

NEW YORK, April 9th. FIND "A Member of Many Clubs" again appears in your issue of April 8th. It doesn't much matter whether "Cricket" is an individual or an association. But to satisfy him on that point I will inform him that it is an individual. I ever supposed he was the author of the remark "this reform was much needed to protect one or two kindred organizations in this city," and I nowhere in my Just communication say that I did; I defy him to point out any such sentence.

point out any such sentence.

The Staten Island Club, in passing their late amendment, considered it was adopting a course for the future which would be a benefit to cricket, for the reason that its amendment prohibited revolving.

You, Mr. Editor, spoke of it as a "reform" in your editorial of Lon, Mr. Entry spons of it as a ferror in your contributor.

Feb. 5th, that "was much needed not only to stamp the club's individuality, but also to protect one or two kindred organizations in this vicinity."

In this vicinity."
"A Member of Many Clubs" then comes out in your next issue with the statement that he very much doubts if the anendment can be termed a reform, and falls to see what protection it affords

with the Statement and not very linear country the amendment can be termed a reform, and fulls to see what protection it altorist other organizations—"or how it will benefit the game of cricket." Now, sir, if the practice of revolving is injurious to orfeket; if it be your opinion that a club loses independence and interest, and becomes demonlized by continually making up its clovens from among the strong players of other clubs, then it is very easy to see how you consider the rule prohibiting revolving will benefit the game of cricket. So, too, for the same reasons it benefits "kindred organizations" by protecting them gainst their own injurious acts and practices—protecting them by throwing each club upon its own resources, and not permitting them to the out a half-dead-and-alive existence under the conviction that whenever it wishes a few laurels or a little glory it can attain them by simply calling in the services of other clubs' best men on match days.

ays. It is true the Staten Island Club has permitted revolving in the It is true the Staten Island Club has permitted revolving in the past. It is true, too, that the club itself was organized or started by two or three revolvers. This sort of thing may still go on, so far as the amendment in question is concerned. That only prevents its members from playing sgainst itself in matches. The members of the Staten Island clubs can lain as many allebs.

nor is the micrometer for a present as concretion. That only prevents its members from playing sgalist itself in matches.

The members of the Staton Island clubs can Join as many clubs as they choose. If they wish to give a young club the benealt of their pecuniary support or experience and knowledge of the game they can do so. Only, they must not play against their own club in matches. But while the amendment does not in terms prohibit its members from playing in matches between third parties—in matches where the Staten Island Club is not a contestant—the spirit of the amendment would prevent even this, except in favor of young clubs who needed a helping hand. The amendment should not be carried so far as to destroy club individuality. It should not be relaxed in favor of such organizations who are abundantly able to take care of themselves, but are unwilling to do so from lack of interest and club pride on the part of its members.

members.

The rule is intended to apply to the damaging system that a number of strong clubs have gotten into—of getting somebody clse to fight their battles for them.

In matches between thoroughly revolving clubs there is as little interest taken as there is in matches between the classical and modern side of an English public school. It amounts to a pick up of sides and no more

Now Lusk if it is not a matter beyond dispute that in matches between strictly non-revolving clubs—as the Harrow and Etor match and the Oxford and Cambridge match—there is not ter times more interest taken than in any contest between revolvers People, it is true, rish to Lord's to see the letting of a Grace People, his true, rish to Lord's to see the entting of a Grace or the bowling of a Shaw, and unless there is some club individually represented in the match, come away caring very little which side wins. But on Eton and Harrow days the sympathies of the side wins. But on Eton and Harrow days the sympathies of crowd are with one club or the other. If you have ever had opportunity to notice the crowd of old Eton and Harrow m If you have ever had the i gentlemen—who attend the Elon and Harrow contests, and see e interest they take in the teams of their respective schools, you will understand what club pride is.

This is one of the benefits of the non-revolving system. This is one of the benefits of the non-revolving system. What interest, thinks you, would have been taken in the late English Australian contests had revolving been allowed and the English have had the benefit of Spofforth's or Allen's bowling? The result is very readily seen. By such a course all the spice of the match would have been taken out. Put spice into your contests, and you'll get all the cricket and cricket clubs you can wish for; and you'll get all the cricket and cricket clubs you can wish for; and there is no sensoning for your buttless but sens other whole and there is no seasoning for your battles between clubs we compares with the seasoning the non-revolving system gives.

CRICKER

George Wright has been engaged by the Reacon Park Association of Boston as superintendent of the grounds and cricket professional. It is a wise appointment, and one that will be in professional. It is a wise appointment, and one that will be in-dersed by his large number of cricketing friends. The Longwood Cricket Club has secured a "tough one" in George to pit against those clubs that insist on playing professionals; but at the same the Longwood gentlemen will continue their prefer ence for amateur contests as heretofore. With new ground, cricket should "boom" in Boston. With Wright and the

CRICKETER'S ASSOCIATION OF THE UNITED STATES.-The following is the list of filteen clubs belonging to the association: St. Georges, of Staten Island; Manhattan, of New York; the Summit, of New Jersey; the Philadelphia, Germantown, Young America, Merion, Belmont, Chestnut Hill, Oxford, Frankford and America, across, bellow, consistent fine, various, reaskers and firsted, of Philadelphia; the Baltimore, of Baltimore, Md; and Peniusular, of Detroit. At the recent meeting the old officers were re-elected with the exception that Mr. H. W. Brown, of the Germantown, was elected corresponding secretary in place of Mr. Castle, of same club, whose business will prevent him this Mr. Castle, or same outh, whose Dusiness will prevent him this year from attending to the duties. The following were the officers elected for the ensuing year; President, A. A. Outerbridge, Philadolphia; First Vice-President, J. T. Soutter, St. George, of New-York; Second Vice-President, J. Harry Lee, Baltimore; Secretary and Treasurer, John P. Green, Belmont; Corresponding Sectary and treasurer, John F. Jermont, Corresponding Sec-retary, H. W. Brown, 413 Walnut street, Philadelphia, German-town Club; Executive Committee, D. S. Newhall, Young America; J. Ridgway Moore, Staten Island, L. Haines, Merion.

AN ENGLISH TEAM FOR AUSTRALIA.-Alfred Shaw, who, usual, has been professionally engaged for the season by the Marylebone Club, writes us under date of April 7th that he has received an offer to take out a team to Australia at the end of the received an other of take out a cean to Australia at the end of the English season. We have siredy arranged with him to have the names of the players and full particulars at the earliest possible date, and besides all the most interesting and important cricker news of the other side, which his position with the M.C. C will enable him to give.

-A new cricket club has been organized at Paterson, N. J.

The Trenton (N. J.) Cricket Club proposes to have a very busy season, and the secretary, Mr. Richard F. Stevens, Jr., is already arranging his flutures.

-The managers of the Philadelphia cricket clubs met on April 18th, and arranged twenty fixtures for the early part of the season. -The Young America Cricket Club's opening day will be April

-The Manbattan Cricket Club opens at Prospect Park on April

-We are pleased to notify all cricketers that, since the visit of the English team to our shores, two of the members comprising that team, Alfred Shaw and Arthur Shrewsbury, have opened a Hart team, Aliven Sainw and Arthur Shrowsonity, may opened a very extensive establishment at Northinghun, England, for the sale of every class of cricket materials and all other articles nec-essary for athletes. Alived Shaw will be reuombured for his into display of bowling, and Arthur Shrowsbury for his batting capa-bilities. We understand that every article has been elected with the greatest care, and that the new emporium is one of the fore ast of its character on the other side

most of its character on the other side.

The advertisement which we have the pleasure to introduce into our columns will give our readers an idea of the capabilities of the establishment, and Goo. Lane, the well-known professional of the Staten Island Cricket Club, will be happy to supply price lists free, or any other information on application.

Answers to Correspondents.

- C. T. B., Whitehall, N. Y .- An advertisement in our columns will probably secure for you what you wish.
- FLORIDA.-We know of parties who will buy your gun, and when you send us your address, shall be pleased to direct y E. R. W., Orange, N. J.-Your dog will have to be operated
- upon by a veterinary surgeon. Apply to John H. Dancer, 19 Main street, East Orange. J. N. S., Itridgeport, Conn. - The best cleansing span for a daily
- wash for dogs is Spratt's soap, which you can procure from 1 Luze, 18 South William street. W. H. T., Staunton, Va.- Bathe the scalded parts with giveening
- several times a day. No doubt the hair-bulbs are destroyed, in which case the hair will not grow again.
- SNIPE, Dedham, Mass.—Address Mr. Chus. De Rongé, No. 51 Broad street, New York, Secretary of the National American Ken-nel Club. He will probably be able to give information required.

rest of the work. The canvas will not sustain your weight. Put strips or laths in the bottom fore and aft, and upon th small board to stand on and to place stove for seat.

- N. Y. O. B., Adirondack Club House, Newcomb, N. Y.-1. How old must mose be befare they have young? I have one three years old—no calf this year. 2. I wish to get a good bear dog; one that will keep the bear at bay until the hunter comes up. Ans. I Moose usually breed at two years, 2. Get a cur dog. See back
- F. S., Tamaqua, Pa.-I have a Skye terrier bitch that is one and nine months old; she has been in heat twice, although I did not breed to her. It is not seven months since she was in heat and breed to her. At is not seven mornes and search as mean can anything be done for her? Ans. Do not pen her up, but let her run with the dog. Feed liberally. Bitches will often pass one turn, and sometimes run nine or ten months.

 O. STRUARI, Indian Lake, Hamilton Co., N. Y.—Last fall, while

out hunting, my cocker flushed a brace of beautiful birds about the size of a ruffed grouse, black, excepting a few white feathers on the breast, some red over the eyes; very tame. A friend of mine shot seven of the same kind afterward. Will you be so kind as to tell me what they are? Ans. They were undoubtedly spruce or Canada grouse (Tetrao canadensis), a species common in Adirondack and Maine woods

G. J., Sagotown.—My setter puppy has had distemper, and although recovered, he has a jerking of his body. Ans. Your puppy has chores, one of the common results of distemper. As you neglect to state ago it is impossible to specify exact treat-If the dog is six months old or over, give five drops of . It the dog is mix months one or over, give five drops of une of mater twice a day; incote dose to fifteen drops by adding two drops every other Give dessert spoonful of codliver oil twice a day. Feed lib-

A. R., Angusta, Ga.-I have a bull-bitch that has raised a litter of puppies, now ten weeks old, and she seemed all right until a week or two since, when her body became greatly swollen, and she showed a disposition to bury her food. She is lively enough. but has a poor appetite. Ans. You neglect to locate the part awollen, or whether the whole dog is involved. Your dog has probably a tendency to dropsy, in which case twenty drops of spirits of nitre twice a day in water will suffice until you write

nore definitely. CRUISBR.—It is a question whether there is any advantage in using parrow cloths. Lauthorn, who canvases a hundred vachts a using narrow cious. Laptouri, who can uses a number y active year, thinks the usual width of 23 Inches as good as any other Weatherliness implies capacity to go to windward, and has no connection with ability to face bad weather or a beavy sea. The latter are expressed by the terms seaworthy, or scagoing, and meter, and expressed by the terms seaworthy, or seagong, and able. We think 40ft, w.l., 12ft, beam, and 6fft, hold very good dimensions for your purpose, but much depends upon your model. Adopt the keel.

C. A. B., St. Cloud, Minn.—I have an Irish sotter puppy six months old that has the distemper very badly, and has been neglected too long. He is very weak, particularly in small of the back. Have given him nux vomica and fowler's solution of rarsenie in sandl doses. He had one dose of five grains of calonel whon first taken sick. His appetite is poor. What shall I do for him? Ans. You have given entirely too much physic. Allow dog plenty of exercise, clean dry kennel, and pure water. Good food and half a teaspoonful of sulphur twice a week.

L. L., New York City .- From the condition in which you de scribe your dogs, as having little pustules on the skin and run-ning sores which they scratch and bite a good deal, they are evining sores which they scraten and one a good deal, they are evidently affilied with mange. We pressume from what you say and your desire to have then "cured within a week," that they have been entered for the coming bench show, and that you propose is exhibit them. You will be unable to do this, as the discussion of the control of the

case is contagious, and no cure can be encouse within so sant a time. Muzzi your dogs and adopt a treatment similar to that recommended to W. R. P. in this column.

C. R. C., Stamford, Conn.—You are correct in your theory; your dog is afflicted with internal cauker. Cleanse the cars theoroughly with Castile soap and lukewarm water. After carefully oughly with Castine soap and thewarm water. After carrier, drying them with a piece of soft sponge, fill each ear twice a day with the following lotion: Diluted lead water, one ounce: sulphate of zinc, one drachn; water, twelve ounces. Puta cap on the dog. You may occasionally sift equal parts of flower of sulphur and pulverized charcoal in the decare, Girc half and ounce. Epsom saits, in water, twice a week for several weeks, et, no meat. Write again, if dog is no better. diet, no meat.

E. E. B., Mcadville, Pa.—My spaniel has been bitten by a large Newfoundland dog. The cut was just back of the ribs, and three inches in length. I had it's sewed up immediately, re-moved the bandage the next morning the cut was spread open three-quarters of an inch; it seemed to be very lender, and it shortly afterward began to smell badly, and since then it has shown no inclination to beal. What shall I do to effect a cure Ans. It is seldom well to sew up such wounds. Wash with a weak lotion of carbolic acid, one partacid to fifty of water, twice a day leave the wound open, it will heal up; a bandage may be applied

C. A. P., Boston.—The position of your center-board will be governed by the sail plan of your cance. Generally speaking, place its center a little forward of the center of your sails. Area ard about 14sq. ft. immersed. Attach as follows: On the of board about 155, it. himselsed. Actor as Notice of the rail of the cance serew angle-iron, say Ift. long, Hin. high, made of stout sheet iron. To the board serew a strap of [in. Iron, Hin wide, forked to take good hold of board. The upper end of this strap is lurned over, so as to clamp the vertical flange of the n on the rail. With a thumbserew the board can be held in any place along the angle-iron. When not in use, everything can be unscrewed and stowed.

can be unserewed and stowed.

V. R. P., Droodyn, N. Y. -1. Your dog is afflicted with pin-worms; injections of sait will rid him of them. 2. The sore places, which you describe the dog as continually biting, are caused by mange; try Glover's mange cure, advertised in another column. Fowler's solution of arsenie should also be administered inter-antly; but as you neglect to state age of animal, it is impossible naily; but as you neglect to state age of animal, it is impressing for us to prescribe quantity; you may, however, give an aperient of Epsom salts once a week. Your dog is evidently in a very had condition, resulting from lack of exorcise, and want of proper food and care. Mix sulptur and magnesia in food, from which here should be an absouce of all most-

R. P. W., Jersey City, N. J .- 1, What are the peculiar excellences IG.P. Waddresy City, N. J.—), what are important executar executary of the fox terrier? 2. This he any merit as a ratbit dog? Ans. I This fox terrier was originally kept in Shghand as a addition every pack of for homoles, so that if the fox ran into a nole, of "went to earth or ran to ground," as it is called in the partained of the hunting field, the terrier would be on hand to bay the fox and draw him or drive him from his retreat. He will carn living as a destroyer of vermin, and us it "ratter" has no superfor.

2. Of course he can be broken to poke about in the bushes and start out the bares, but for American hare shooting a bengle is the thing. There are no wild rabbits in this country to the manor

J. L. H., Milwaukee, Wis.-My Skye terrier dog, four months Nose is hot and dry and runs a little; appetite good; sleeps in good kennel on clean straw; has been fed on bread and cracker, milk, beef-tea and now and then a little meat bone. I think the disease is distemper in a mild form as yet. Will you kindly presective for him? Ans. The symptoms as you describe them, do not point to distemper, as it does not generally appear in pupples of that age. Your puppy may be afflicted with worms; rive a vermifuge after twelve hours! fasting, tollowed by castor-oil. Write again if no better.

455

L. E. W .- 1. Can I procure a revolving breech ritle? 2. Do the L. E. W.—), can procure a revolving precentille? 2, 10 the Messrs, Smith & Wesson manufacture any rides on the same system as their latest model revolver? 3. Why do they call them Russian model? 4. Did they originate in Russia? 5. Have the Wirchester Arms Co. given up their '73 and '65 models, and only ng the late Hotchkiss? 6. Is not the "5 movers, and only or the late Hotchkiss? 6. Is not the "5 model the best or hunding both large and small game and target practice T. Would you prefer a good muzzle-loader for accuracy Ans. I. The Remington breach action is a falling block; I making the late Hotchkiss'? has not the revolver action. 2. No. 3. Because made for the Russian Government on contract. 4. No. 5. No. 6. So regarded

A SUBSCRIBER, Catawissa, Pa .- We require the name and ad-A SURSCRIBER, Catawissa, Pa.—We require the name and address of all correspondents, not only as a guarantee of good faith but as a matter of common conviesy. Therefore, your anonymous communication would not be regarded, were it not for its length and the excellent namner in which you review the history of your dog's case. That your setter should have been struck by of your dog's case. That your setter should have been struck by t locomotive and live to wag his tail is certainly remarkable. You seem to have prefty thoroughly exhausted the materia medica for your course of treatment, and we cannot suggest anything further in this direction. As to diagnosis, your familiarity with the case is likely to render your opinion far more reliable than under the circumstances, ours could possibly be.

B. Cambridge, Mass.—My pointer, eleven months old, is alling, His appetite is irregular. He is feverish occasionally, but most of the time his uses is cold and damp. He has a cough, particularly in the morning, and with considerable effort coughs up in slimy white liquid. His eyes are generally bright, but some that samy wante inqua. His cycs are generally origin, but run much of the time. With regard to his bowels there is no constipation, but a continual straining accompanied by some distress, and now and then by the passage of a little blood. Most of what he passes, however, would indicate a good condition of the bowels. Ans. You fail to state the length of time the dog bas the bowels. Ans. You fail to state the length of time the dog has been sick. We would suggest, however, that you give full dose of easter-oil, combining with which twenty dops of the oil of male feen; this to be administered in the morning on empty

Gre Lake Village N. H -I have an Irish setter nine years old. that has not been shot over for two years. He now weighs unety-pounds, an increase of twenty-three pounds since time of being worked. He has a bad humor on his body, and his ears are affected with something that gives out a bad odor, and causes him to shake with cometaing that gives out at an obey, and causes must his head continually. Ans. Over feeding and lack of exer-the principal causes of the trouble of your very fat dog, afflieted with both mange and canker. For the former, a dog all over with the following dressing: Two oz. of oil Ans. Over feeding and lack of exercise are Two oz, of oil of tar, dog all over with the following dressing: Two oz. of oil of tar, four oz. of lower of sulphur and one pint of olive oil; apply with friction. Give with food twice a day six drops of Fowler's solution of arsenic, feed sparingly, and mix vegetables with ordinary dict. You do not state whether the canker is internal or external. Write again.

Precuren Princeton College N. J .- I. The only book covering Piscaron, Princeton College, N. J.—1. The only book covering the whole field of fly tying and fly fishing is Hallock's "Sports man's Gazetteer," although the space devoted to these subjects in necessarily limited. 2. The best books on fly making are Ronald' necessarily innited, 2. The toes noose only managed to could a "Fp Fishers" Intomology" and Blacker's "Art of Fly Making," both English. 2. Francis Francis is the best writer on tackle making. 4. For general fishing subjects read Frank Forester's "Fish and Fishing." 5. The best authority on fishing in this country is the Forest and Stiegam. 6. You will find artificial files made up of brilliant colors more effective than artificial insects. The latter must be used like files, or if used like bait, insects. The latter must be used have ness of it used has ear, must be trolled or skittered in rapid water. 7. For April front flashing go to Long Island, south side. 8. The best English journal devoted to piscatorial pursuits is Land and Water, but you must remember that it is English. 9. Yes; stories, ancedotes and formation about fishing are always acceptable

B. S., Chatanooga, Tenn.—My Newfoundland, fifteen months old, two feet, four inches in height, weight thirty-live to forty pounds, is very sigk. Last summer he had what I presume was pounds, is very store. The trustment is caused pictured and sup-pounds, is very store that the mouth and snap at everyhody. I gave him easter oil and copperas; he seemed to get over the fits, but became very weak. He has retained a pe-cultar twitching of the limbs, which caused him to suffer very nucli. He has since lost a little of the twitching and does not seem to be troubled as much. I have tried thoroughly for worms without success. I daministered quintine, four grains a day, for a week, but it appearently did him no good. What shall I do 'or him? Ans. The weight alone shows what poor condition your deg must be in. Give mild appearent, say two compound rhubarh pills every second or third day, and administer eight grains of out-nine once a day, for two weeks, after which thus, give table-spoonful of cod-liver oil cate day. Feed liberally, and after giving above treatment a thorough Irial, write result. the distance, he would have fits, froth at the mouth and snap

RUSSIAN, New York.-The Russian method of manufacturing eaviare is given as follows: "The eggs of the sturgeon are thrown upon a very the and tightly-stretched met, through which the grains are lightly pages of. The eggs are fiberally spirikated with salt and eavefully turned over with a fork. The caviare is known as the contraction of the end of the caviare is known. grains are lightly progsed. The eggs are liberally sprinkled with salt and eaverfully turned over with a forex. The cavaries is known to be ready for packing when upon being stirred the grains begin to emit a slight inctallic or glassy sound, which never occurs till the whole mass has been sufficiently impregnated with salt. In preparing the pressed caviare the grains are squeezed through a net or sleve into a tub of brine of a greater or lesses strength according to the s. a-su. The whole mass is continually stirred with a wooden fert, always turning the same way, full the rock thoroughly and evenly impregnated with brine, after which the effect out of the property of the second way the property of the prope n out with fine sieves, from which the brine is allowed stuffs taken out with fine sieves, from which the brine is allowed to drip. Imageing the roc consists in putting it up in conclusions made from the linden tree bark. These bars when filled, are placed under a press, in order that all the brine may be thoroughly sque zoot out and the roc crushed into a solid mass. The enviare is now ready for packing, and is taken from the sacks and placed in large casks containing as much as Lowe pounds. This kind of enviare is called earler d to service. Caciar d sac is composed of the threst of the pressed stuff, and comes to market In long linen bags and sometimes in thus." We may add that it takes Russian to appreciate the delicacy.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVA-TION OF FORESTS, AND THE ISOLIDATION IN MEN AND WOMEN OF A HEADTHY INTEREST IN OUT-DOOR RECREATION AND STUDY!

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

REMOVAL.—The next number of the Forest STREAM will be issued from its new offices in the Times building, Nos. 39 and 40 Park row.

Notes.—Protect the nesting birds. Thousands of eggs are stolen every year by nest-robbing urchins, who are responsible in a large measure for the scarcity of the birds. We have before called attention to the bird-eating habits of the domestic cat. It ought to be understood that a single cat will destroy more birds on a farm than all the other kinds of vermin together. If you care anything for the song bird, make way with the preying cat.

There is reason to believe that the supply of wild rice gathered next fall will be a large one. We have received from Mr. R. Valentine, Janesville, Wis., a fine sample of the seed gathered by him, and we are told that he has made provision for securing a large harvest. Not a week passes in which we do not receive letters of inquiry about the seed.

The potato sent by "Piseco" came to us in good condition, and has been submitted by us to the inspection of Mr. Peter Henderson, the well-known dealer in seeds, and probably the best authority on the subject in the United States. He pronounces it a fine, well-developed specimen, and gives it as his opinion that if planted it will grow.

The letter on gold mining is at hand and will be published at once. It represents a vast deal of labor, and evinces the painstaking, careful manner in which "Piseco" conducts his investigations. We may safely affirm that our correspondent's letters contain the most authentic and thoroughly reliable information about Alaska ever published. "Piseco" is admirably fitted to arrive at the true merits of the case, and he has entered upon the task with the determination to put matters in their true light.

We publish to-day the first of a series of letters from our Staff Correspondent at the Berlin Fishery Exposition. We shall give, in the FOREST AND STREAM, the most complete and intelligent account of this Exposition published in America.

A telegram announces the lower Saranao free from

THE TEAM FOR IRELAND.

THE call which will be found in our Rifle Columns or such as wish to go to Europe as members of the American team, has the merit of being a prompt and ready way of getting at the best men to send. Only seven shooters are needed, but they must be of the best and willing to be molded into a company of coördinates or factors to one grand result. The team will not do credit to itself if it should win the match on a score under 1,200, and the further above that figure it finds itself forced the more creditable will be its victory. The plan of selection is a mixture of the competitive with the method of arbitrary appointment. It will be seen that the choice in the first place rests with the clubs over the country. They may sort out their best timber and send it be more than the number of men required to go, a sharp, decisive, winnowing process will leave only the proper men on the team. There should be no complaint at the method of the team selection. It cannot be unfair to a really good shot, and the right to reject a member of the team, if it be felt that by some lucky mishap the wrong man has put himself on the team, still rests with the other team men. If in any of the out-of-town clubs any man feels that he has not had fair treatment, or has been in very bad luck, there is a chance open for one of the three places which are to be competed for at Creedmoor, and then in the final sorting on the 19th and 21st of May he must show his ability to hold his own. The selection of the captain is reserved by the National Rifle Association, and while it is not certain at this writing whether or not Col. Bodine can accept the position, the tender to him shows that the committee, who have only the interest of the team at heart, are bound to have a shooting man at the head of the visiting body. With regard to the financial support of the team, the

\$5,000 required to see the team through its journey ought to be forthcoming at once. The National Rifle Association Directors raised in the dull times of 1875 over \$6,000 for the team of that year, and there should be no trouble at all in raising the smaller sum at this time of business "booms" and reviving prosperity. While the committee particularly desire to have the team members drawn from a wide radius, and have all sections of the country represented, they wish also to give opportunity for contribution of money support from riflemen and friends of riflemen in all parts of the coun-This is as it should be, and while no rifleman need deterred from competing for a place on any money considerations, it is expected that associations able so to do will do their share in the support. We will publish, from time to time, names of contributors to the and all moneys may be sent to the office of the National Rifle Association, 23 Park Row, New York,

One thing is certain, that the team will find its visit to Ireland a memory long to be preserved. The team of 1875 yet keep a vivid remembrance of the overwhelming Irish hospitality which they enjoyed, and it is assured in advance that the visitors of the coming summer will receive an equally warm welcome.

-Lord Dufferin contributes a pleasant paper entitled "Days in the Woods," to the April number of the Nineteenth Century. Canada's late Governor-General entered into the spirit of woodland adventure, and this spirit he has always happily communicated to his descriptions of sporting expeditions. The present paper describes moose unting in the New Brunswick wilds.

-We publish elsewhere an opinion on the trap shooting of pigeons. Without now at all discussing the merits of the case, we may remark that there is a wide difference of sentiment upon the subject, due partly to the nonsensical attitude assumed by the Society for the Prevention of Cruelty to Animals-a society which has accomplished a most admirable work, and which yet has not escaped the tendency manifested by all similar institutions to belittle and demean itself by officious and meddlesome interference in matters wholly outside of its legitimate field.

-Thousands of acres of wild and cultivated lands have been devastated the past week by extensive forest fires in New Jersey, Pennsylvania and Virginia. The country about Tuckerton and Tom's River and Forked River, New Jersey, has been swept over by the flames, and cranberry bogs, strawberry farms, timber, dwellings, barns, and live stock destroyed. The well-known shooting grounds in that region have been utterly destroyed. The singed bodies of thousands of quail and other game birds, and rabbits, have been found on the outskirts of the burned Immense quantities of game have also been destroyed in Monroe and Pike counties, in Pennsylvania. Warm, dry and windy weather has prevailed in Virginia for several weeks past, and these forest fires there are reported unprecedented in extent and damage. The fires in the Dismal Swamp have been raging for more than a week. They envelop the whole of Lake Drum-mond. The cultivated sections of the adjoining country are overrun with bears, panthers, deer and smaller game.

THE RESOURCES OF ALASKA

SITKA, Alaska, Jan. 27th, 1880.

THE periodical disturber of our serene and tranquil existence in Sitka, which twice each month gladdens our eyes, once as her smoke is discerned on the horizonfor we know at once it is the California, as nothing else comes here-and again as she dips her flag in a parting salute, paid us but a brief visit this time ; only one day, and in that short compass the correspondence and business of the month passed, and the one yet to be passed had to be concentrated. Usually we have three days, but a detention by a dangerous bar of six days in the Columhis River deprived us of two of them.

When, after over twenty hours continuous work, I dropped my last letter into an extra bag that just caught the steamer. I felt that I had accomplished a great deal of work ; but now that it is too late to remedy I find that "I have left undone many things which I ought to have done," and I fear it will be judged that "there's no good in me." My next mail will be largely composed of apol-We have in Sitka many days which, gauged by ogies. our feelings, are very long ones, but steamer day is not one of them. Impressions formed by transient visitors as to the normal condition of Sitka on that day are very apt to prove erroneous. Everything is in a turmoil, and we find that several days of subsequent rest are necessary to enable us to settle down into our usual lethargic con-We have learned to appreciate the feelings of dition. Diogenes when he only asked that people would not obstruct his sunshine. It takes several days to re-acquire the lost habit of reading newspapers, and before attacking a formidable pile of dailies I usually take a few easy lessons with Forest and Stream.

Following up this custom, I was enjoying myself and at peace with the world, when in your issue of Dec. 18th I came across the somewhat patronizing and slightly free and easy-for at times it runs into personalitiesletter of Prof. Elliott, in which he apparently brushes away the various facts which I presented in my letter published Dec. 4th, claiming, however, to simply show my inferences wrong, while "cheerfully bearing witness to the facts."

Mr. Editor, those facts still stand. They have not been squarely met, and until they are, I shall press them. Against them he has opposed a series of theories and prophecies, hypotheses, opinions and badinage, but not a fact! And he skillfully begs the question at issue, and running off upon a new tack avoids obstacles which he himself places in his path. Mine remain to be confuted.

I am fully aware that in reopening this controversy I run great risks. I am not an expert in the handling of that mighty weapon of which the Professor in many a hard-fought battle, when much ink was shed, has proved himself a master, and so skillfully has he cut in quarter and tierce that you, a bystander, have fancied that he has pinked me, for you say editorially that "he has made good" the previous opinions advanced. Apparently he did, but I think I can show that he failed to touch. Allow me to place in contrast the opinions first advanced by him, and which I undertook to show were erroneous, and those which in his last letter he endeavors to sustain, "The agricultural possibilities of Alaska are First set: null and void," and he challenges the citation "of a single instance where an acre of ground has ever been or can be successfully planted annually with a crop of either corn, wheat, barley or potatoes." In his last he seeks to prove the truth of the above position by arguments which are based entirely upon a forced construction of the one word which will admit of an argument, "successfully," and sums up : "Therefore I say, and I think with entire truth, that you cannot raise potatoes successfully in a region where they will not sustain themselves from year And this in spite of the evidence I presented to year." by the citing of many instances where for many years annual crops of excellent potatoes had been obtained from many plots, some of which were of more than a single acre in extent; of my own assertion that I had seen such plots under cultivation, and that at the time I wrote I was enjoying their produce. I also asserted that during my stay of, at that time, nearly four months (the Professor was here but two days), we had been bountifully supplied with excellent vegetables, twelve species of which I enumerated.

I think that had the Professor prolonged his stay, and been forced, as we have been, to depend upon those "little plots" of which he speaks with such contempt, his opinion would have been more correct, hence more valuable. I will refer again to that large potato which the Professor disposes of so summarily by the facetious title of "Giant Alaskan Murphy," He indulges in prophecy in regard to it and states "that in from six weeks to four months it would have become a mass of decay " if I had not eaten it then. I will not follow his example and treat an hypothesis as a proved fact. All that I can say positively about that particular potato is, that it was not kept long enough to prove or disprove his assertion. I am able, however, to say positively that many other large potatoes raised in the same plot, but gathered a little later, are at this moment in excellent order, although his longest period, "four months," has elapsed, I will, by the steamer that carries this, send to him and to you also, a fair specimen of said potatoes, and it strikes me that the Professor will be compelled to admit that it is his prophecy and not the "fondest hopes of 'Piseco'" which "come to naught." I must confess that when I read in his first paper the remark about " the watery walnuts, dubbed potatoes," I had no idea that he had, as he admits in his last, "witnessed, tasted and handled" himself, at Sitka, just such potatoes, weighing nearly a pound each, and good. However I will send him another, and I feel very confident that he will have some difficulty in brushing aside, as an "erroneous inference," so substantial an argument—one I run some risk in advancing at this time, as nearly two months must elapse and a long journey be taken before the potatoes can reach their destination, and they may come to grief. Before dropping this potato, which has proved a hot one, I will say that if most or many of the Professor's statements in regard to Alaska affairs are to be taken with so many grains of salt, as in this case, I cannot wonder that every well-informed person with whom I come in contact here differs with him so radically upon so many points. In his next paragraph Prof. E. makes it perfectly clear to "Piseco" "that potatoes cannot be successfully raised in Alaska," by argument based upon experiments in cotton raising in Ohio, and warming with his subject, pronounces the attempt " an utter failure," simply because he finds that he can't raise in Ohio as good cotton as can be raised in Georgia. "Piseco" utterly fails to trace the connection, and remains of the opinion that the cotton experiment has very little, if any, bearing upon the question, and having seen many and eaten some very excellent potatoes raised in Alaska, is not prepared to admit that the crop of 1879 was "an utter failure

Very few practical gardeners would be willing to admit that their gardens were failures simply because each season they found themselves compelled to resort to professional seedsmen for fresh supplies of seeds and cuttings.

Things which are equal to each other, we are taught, are equal to the same thing. Let us apply the axiom: Ohio cotton not as good as Georgia cotton; Connecticut tobacco not as good as Virginia ditto; therefore, the first crop being an utter failure, so is the second.

By mutual consent the stock-raising question is left out of the discussion. All that either of us know about it is what other people have told us, and judging by the weather we are having this winter, I rather believe that his informant judged more correctly than mine; but one reason that the Professor gave in his first paper, to show that it could not be done, will not stand against facts. He says squarely: "Hay cannot be cured in this country." I say just as positively that it can, and has been for many seasons.

I will first prove my assertion by matching direct information from the parties who have cured it, against his opinion. Doyle, the man who planted or sowed the first seed in Katliansky Bay, assures me that he has year after year obtained good crops of cured hay. And there has been, this last season, to my certain knowledge, for I have seen it brought in, and know that it is now being fed daily to cows and mules, a crop of eighty or a hundred tons—I don't know exactly how much—of excellent hay, composed of timothy and clover.

Can the Professor controvert this statement, and prove conclusively that it is an "erroneous inference," by asserting that we have only got to keep it long enough, and it will get musty?

The following, which is written by a man who is up in Alaska matters, is worth reproduction in this connection:

NOT QUITE CORRECT.

A recent number of the San Francisco Alla contained a letter from a "special correspondent" on the subject of Alaska, which displays much carelessness, if not absolute ignorance, on the part of the writer. After enlarging upon the manner of killing seals under contract on the Pribyion Islands, the correspondent enters into details concerning other parts of the Territory too palpably false to be allowed to pass without refutation.

With reference to the island of Kadiak, he states that the only settle nent is at St. Paul Harbor, and that only twelve acres are under cultivation in that most favored spot of the Territory, producing "a few potatoes and some grass." The statistics in another column of this number of the Appeal inform our readers of the number of settlements and inhabitants of Kadiak and vicinity. The acreage under potatoes and turnips on Kadiak and Afognak alone, mounts into the hundreds, and as for the "unitivation of grass." the Alta's correspondent has evidently never seen the luxuriant growth of timothy and other grasses of that region, completely hiding a man of common stature. Thousands of people make a living on those islands, raising potatoes enough for home consumption and export to less favored sections of the Territory. Cord wood and rough lumber is also shipped from here to treeless Aleutian Islands, and the southern portion of the Altaka Peninsula.

Of the numerous quartz ledges of Sitka, the correspondent

Of the numerous quartz ledges of Sitka, the correspondent mentions but "one recently discovered mine," and then goes on to state that "industrial enterprises have failed, because the Crooles refused to work"—a very unjust accusation of a whole class of people. The ample facilities for vegetable gardening at Sitks, Wrangell and on Prince of Wales Island, the writer passes over in silence, as well as the fisheries; his whole communication follows in the footsteps of many other similar productions of men who set out to write about Alaska with a lirn determination to see nothing that is good or even promising for the future, in any part of the neglected Territory—Alaska Appeat, Dec. 500A.

In some respects I agree with Prof. Elliott. He is undoubtedly correct in the assumption that if "three thousand misguided mortals" should come suddenly into Sitka, they would be compelled to send below for many necessaries. We three hundred who are here now have to do that or become impoverished; the store-keepers are merciless, and charge such exorbitant prices for everything, that most of us who have to spend a dollar save the half of one by so sending.

But Sitka is not peculiar in that respect. I fancy that

But Sitka is not peculiar in that respect. I fancy that the inhabitants of Virginia City, and Leadville, and Deadwood have to send somewhere for a great many things; and even those of New York who want first-class beef send West, and for early vegetables, South. But I do believe that if such an influx were preceded by that of a few competent and industrious farmers, Sitka and vicinity could adapt itself to the situation, and I so expressed myself in this connection—a point which Prof. E. apparently overlooked,

And now about "those mines near Sitka." In his first paper, Prof. E. says: "If the gold mines are so rich, why are they not worked?" In his last, he completely overlooks my direct assertion that certain of the ledges are being worked and sending bullion away monthly, and various other well-founded statements, and gives this enigmatical reply:—

"As for those mines near Sitka, that is a long story, and dates back prior to the transfer; and when "Piseco" gets away next year (I hope he's right, then) he will substantially agree with me in regard to them, if the owners of those mines have a valuable vein (valuable veins?), then they are in full sympathy with me, because they do not want it (them?) puffed outside of their own knowledge; but if they are simply doing what; thousands of such people are daily doing, floating worthless stock then of course I shall merit their hostility."

"Piseco" gives it up; and will here only repeat his statement, that he has good reason to believe that, whatever may have been the state of affairs at the date of the Professor's visit, there have since been discovered by miners who have flocked here, a great many ledges of quartz, many of which have been proved by assay to be auriferous, and which are owned in two cases only by incorporated companies; that most of them are owned by the miners who discovered them, and that most of said miners are poor men, who are not in sympathy with the Professor, although "they believe their ledges valuable," because they feel that it is partially due to his persistent assertions to the contrary, that capitalists refrain from investigating and developing the mineral resources of Alaska.

A 10-stamp mill, run by steam, is at work upon one of these mines, and producing such returns as justify its owners, who are among the most respectable business men of Portland, and United States officers—army and navy—in the belief that they have a good thing. I shall send to the Smithsonian, also to you, Mr. Editor, some specimens of Alaska quartz; and if Prof. Elliott will but ask of the mineralogist of the Smithsonian, and you, of any expert among your acquaintances, their character, I think that you, at least, will be satisfied that, if there is plenty of it, the ledges from which it was obtained must have value.

In stating that the knowledge of auriferous quartz edges existing in the vicinity of Sitka dates prior to the transfer, the Professor is again mistaken. The transfer took place in 1868; the first discovery of a quartz ledge took place in 1871. The history of the successive steps through which this mining region has advanced to its present condition, is, as he says, a long story, and no one man knows it; but there are at Sitka, and at the mines, all of the men who have from time to time discovered these ledges, and each has his quota of personal knowledge. I will make it my business to interview all of these men, and getting their stories, compare and sift them, examine records and papers, and in my next furnish you with the first and only authentic and connected history of mining developments in this country. From my present knowledge, I am convinced that while there has been more or less "wildcatting" of certain of these ledges, which I am in accord with the Professor in condemning, yet there is also perfectly logitimate mining now being prosecuted in this vicinity.

February 18th.—Please see that the above date is inserted, Mr. Editor, for it bears on the great potato question. Five months and one day have elapsed since I helped eat that "giant Murphy," which in four months, at the outside, was doomed by the Professor to decay and corruption. Yet to-day I have seen quite a quantity of its mates and have had some for my dinner, and they were very good potatoes. (I have used great care in the construction of the above assertion. The last time I referred to a dinner in which an Alaska potato figured, I incautiously admitted that it was not "quite ripe," and thereby furnished proof positive that Alaska potatoes never do get ripe).

In anticipation of the possible arrival to-morrow of the steamer, I went for the potatocs which I have promised to send, obtained them and found them in excellent preservation. A rather amusing conversation took place. The seller apologized for the small size of the "tubers"

(they weigh about six ounces on an average) and explained that he had sold all of his crop except these three barrels, which were small ones he was keeping for seed." This rather staggered me. I hated to see the man make such a dead waste of such a fine lot of potatoes, and said to him.

"I wouldn't undertake to save them for seed, they won't grow if you do plant them."

"Won't grow, is it, and why not, I'd like to know?"
"Why, Alaska potatoes don't get ripe, and are of no use for seed."

"Won't they? Ain't they? Well then, who's been telling you that?"

"Why, Prof. Elliott says"-

"Prof. Elliott, what does he know about it?"

I answered truly that I didn't know, and then my friend explained to me that he and Smeig, and others whom he mentioned, had for several years raised their potatoes from the small ones saved from the year before! Mr. Editor, I felt a good deal, I have no doubt John Phœnix did, when the native assured him that

John Phoenix did, when the native assured him that the distance to the next ranche was but a mile, while the assistant with the pedometer had made it twenty. "The dicta of science is not to be disputed," but I have since questioned several who don't raise, but have bought potatoes here for many years, and they all back the native, and convince me beyond a doubt the agricultural possibilities, etc., were very limited. I should have agreed with him, but to "take away from him who hath not, even that which he hath," may be scriptural, but it is not fair worldly policy.

March 26th.—That potato ought to have been with you ore this, but a failure of the steamer to make her usual trips has kept our mails waiting. It starts from here in excellent condition—as does a mate, to the Professor—and my dinner to-day was partially composed of some from the same lot.

PISECO.

GAME IN SEASON IN APRIL

Wild Ducks, Geese, Brant, etc.

GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Senson; Fish and its Season; Boats, Guides, etc.; Name of person to address.

NESTING PIGEONS.

Late advices from Shelby, Mich. announce the arrival of the wild pigeons. The trappers, or netters, are also there to the number of about eighty. It is expected that in a few days the pigeons will begin their preparations for nesting, when they will be settled for about a month, and the pigeon-catchers' harvest will begin. A few seasons ago your correspondent spent two weeks in the same locality, and saw one of the largest roosts and the business of pigeoning in full blast. The netters, buyers and pigeons generally arrive on the ground at more and the same time, the course of the birds being found out by use of the telegraph. The netters at once proceed to secure a good place to set their nets, often paying as high as \$50 for a favored spot where the flight is good, or for some drinking place or salt marsh where the birds are in the labit of going. The buyers erect coops for holding live birds, or get together their stock of barrels and ice for shipping dead birds, though a good proportion of the trappers ship their own, birds alive or dead to New York and Chicago. I saw dead birds sold at Shelby for fifteen cents, and live for thirty cents per dozen, though the average prices are higher. The morning and evening hours are best for catching, as then the flights are on. I saw 287 taken at one spring of a single net, over a bed of muck to which the birds had been baited for some days by sprinkling salt over the mud. On these beds no decoys are used, the baiting being sufficient. The pigeons would

hours are best for catching, as then the flights are on. I saw 287 taken at one spring of a single net, over a bed of muck to which the birds had been baited for some days by sprinkling sait over the mud. On these beds no decoys are used, the baiting being sufficient. The pigeons would eat greedily of the salted muck.

On the occasion I speak of we arrived at the bower just before daybreak. The birds were well baited, and I expected to see a fine catch, as no net had as yet been sprung over that bed. With the first streaks of light we could hear the flutter of wings as they lit in the trees about the bed. As the light increased they came faster and thicker, until soon the trees were alive with them, and the woods were filled with their calls. Soon a single pigeon dropped upon the bed, and had hardly folded its wings before others began to pour from the trees in a stream. When they seemed to be standing on each other's backs and you could see nothing but pointed tails sticking up, and while they were still flying thickly down on to the bed, we both jerked the line with all our might. There was a loud swehs as the net sprang over, the lead line knocking feathers from those still in the air and in the way of the net. We rushed from our cover, and while I stood in astonishment at the boiling mass under the meshes, the netter proceeded to fasten down the corners of the net and remove the birds to the

coops It requires the most skill to trap pigeons as they are flying over a net. A flyer (a pigeon with its eyes sewed shut and a light weight fastened to its legs) being first thrown in the air to attract the attention of a passing flock, and a stool (a pigeon trained to act as if a lighting) being industriously worked to induce the flight to strike upon the bed when the not is sprung. The earch per day per man ranges from nothing to fifty or sixty dozen. No shooting is allowed within five miles of the roost proper. Good shooting (for those who wish to shoot nesting birds) can be had outside these limits, as

the birds fly several miles for food, passing some points continuously at some hours of the day.

This roost was thirty miles long, varying in width from one to five miles. There were 200 men engaged in the business at one time that season, and as a result of their work I saw one hundred barrels of dead pigeens alone shipped in one day from the little village of Shelby.

I did not think then that there would be a pigeon left to lead the way to the woods of Shelby at some future season, but it seems there was, and their enemies are on hand to wage the war of extermination. How long can it last?

Chicago, Ill., April 9th.

MASSACHUSTITS—Lynn, April 17th.—After scientifically crawling and creeping some quarter of a mile, one of our local sports recently succeeded in obtaining a fine shot at two wooder death. Five live ones that were a short distance off, and making up to the wooden birds, thought they would get up and dust about that time. "Sich is life." A few snipe have been brought to bag in this vicinity lately. There are runners of certain parties shooting woodcock, but I hope this is not so.

BLUE CROW. BLUE CROW.

New York—Poughkeepsie, April 15th.—Messrs, Frank B. Johnson and Fred Utting, of Plattsburg, N. Y., succeeded in bringing to bag on April 2d and 3d twenty-nine Canada wild geese and seventy-two wild ducks, most being black, golden eye and whistlers.

BLUNDERBUSS.

Blunderbuss.

New Jersey—Newark.—On Friday night last the honking of wild geese was heard for three or four hours, evidently lost in the gale.

Snipe shooting at Pine Brook, N. J., was good on Saturday and Monday last, Messrs. Hinds and Tappan moved a number of hirds, of which they killed twelve. We saw the birds. The meadows are in fine condition, particularly the Big and Little Piece, Mr. Scott Rodman and party tilso had good shooting.

In this week's paper your Ocean County, N. J., correspondent says the best lag heard of, of Wilson snipe, is given. John W. Bunnell, of Forked River, killed on Thursday, 8th inst., nine snipe. Birds wild; weather cold; wind high.

NORTH CAROLINA GAME AND HOSPITALITY—Devideo.

NORTH CAROLINA GAME AND HOSPITALITY.—Davidson College, N. C., March 29th.—North Carolina is a nonpareil hunting resort for those of your Northern sportsmen who are sighing for new worlds to conquer. The quali is found in abundance all over the State, and it would be hard to say where they are most plentiful. In sight of Salisbury, N. C., coveys are quite numerous; some gentlemen there often make bags of fifty or sixty a day, and Linave no doubt that in some of the less-thickly inhabited was recommended. I have no doubt that in some of the less-timely inhabited and poorer parts of the State they have never been disturbed at all, except by the harmless traps of the young scions of our colored brethren; traps for which the average quait has a profound contempt. Near Davidson College the writer found two large coveys in a pine thicket of about half an acre in area. Don't you wish you had

tinere 100: 1 our numerous rivers duck and geese are found, and

ocen there to 3?

On our numerous rivers duck and geese are found, and the swamps and mill-ponds often contain snipe and duck ad infinitian. In the western part of the Situle, among the mountains, there are deer, pheasant and wild turkeys in sufficient numbers to justify a visit to those regions; not to mention the grand and beautiful scenery which meets your eye at every step.

Good accommodations can be found anywhere. And the little urchin, black or white, whom you meet on the road or in the cotton field will always be willing and happy to show you where the "partiages" stay; and will often wonder why you "don't kill "ein on de ground," unless he has received some instructions in the art of hunting. He is often indispensable to aid in marking down the birds, especially in the pine woods or brush, where the sportsman has enough to do to get his brace of the swiftly ilying, dodging, vanishing bunches of feeter. North Coradinium, it ill becomes me to say one.

of the swiftly flying, dolging, vanishing bunches of feathers.

As a North Carolinian, it ill becomes mo to say anything about the hospitality and courtesy of the people; but if any of our Northern friends who entertain any doubts on that score will only come and see for themselves they will never doubt again. The farmers in many places "post" their land, that is, forbid all hunning on it but a courtcous request for permission to kill some qual is seldom refused, and never, without good and sufficient reasons, and the practice only serves to make the game more plentiful. Often the farmer himself is an ardent sportsman, and then you are sure of a welcome which every true gentleman and sportsman knows how to give.

H.

THE GENNERS OF CURRITUCE. -Poplar Branch, N. C.

The Genner of Cerritude.—Poplar Branch, N. C., April 12th.—Our attention having been called to an article in your paper, headed: "A Dismal Story of Curritude, N. C.," we, the gumers referred to in that article, beep leave to have a hearing in your valuable columns, in order that we may vindical ourselves.

In the first place we venture to assert that he is no true sportsman. We will omit his exaggerations in regard to the ungrammatical language of the captain of the steamer Cypnet, and will come to his landing at this place where congregate? "quite a number of inhabitants of this most intelligent country." We beg leave to ask Mr. Ezzykill" whether his pockets or those of his friend Jenkins were tampered with by any one in that large crowd? We say, candidly, no sir such an act has naver been known to be perpetrated in this half-civilized country of ours. And yet the gentheann charges us with the crime And yet the gentleman charges us with the crime

ours. And yet the gentleman charges us with the crime of being heathens?

After reaching the landing he says he was asked to step into a two-wheel cart which, together with the horse that pulled it, this "Ezeykiil" burdesqued to his he horse he horse that pulled it, this "Ezeykiil" burdesqued to his he horse that pulled it, this "Ezeykiil" burdesqued to his he horse he had but it he horse he horse he had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had but it he horse had b

the polito request of "One dollar each, gentlemen, one dollar apieco is all I'll charge you." How strikingly the contrast between riding in a civilized country and one where dwell less intelligent heathen! Cannot "Ezeykill", send a nice borse-collar to the owner of that poor quadruped, in question, to pay for his free ride? Now we come to the point wherein we are directly concerned. Mr. E. says that his guides selected a point for shooling, and put out the decoys. Then he says: "Soon, what do we have but four of those gunners of that honorable and liberal minded place come out with two batteries and plant them within three hundred yards of us." This we pronounce literally false. We had our batteries planted, decoys out, and two of us were ensconced in the batteries, when Mr. E., with his friend Jenkins and guides sailed by us on their way to the selected point. To corroborate our own statement we have to say that we questioned both of Mr. E.'s guides and they acknowledged that we were out a long time before they started from the wharf.

In regard to the mortgaging of boats, batterie and decoys by the professional gunners, to sustain them through the summer, we have to say that your in-

In regard to the mortgaging of boats, batteries and decoys by the professional gunners, to sustain them through the summer, we have to say that your informant was very much mistaken. We are quite well posted in regard to who have and who have not mortgaged their property, and we can safely say that we do not know of a single instance (ouch less the majority of gunners) where a gunner has had to mortgage his boat, battery or decoys for his sustenance during the summer. Sorry that one of our citizens should "get up" such a misrepresentation of the gunners. The fishermen sometimes mortgage their boats, but the gunners never, or hardly over. times mortg hardly over.

hardly over.
Without using any fictitious names we respectfully
subscribe ourselves as the four gunners referred to by Mr.
"Ezeykilt." A. B. WILLIAIS, S. D. DUNTON, W. H.
WALKER, J. T. O'NEAL.

AREANSAS NOTES.—Pittsburg, Pa., March 22d.—I have read with much interest the letter of "Yell" in one of your late issues on the "Attractions of Arkansas." I had taken copious notes on the arrival and departure of our different birds of passage, but being unfortunately wrecked on the Iron Mountain Road on the edge of Black River at midnight, I lost my note-book and all my traps. These notes I find in other paners.

These notes I find in other papers.

Saw the first meadow lark on Oct. 20th, 1879; the first Saw the first meadow lark on Oct. 20th, 1879; the first flock of wild pigeons on the 22d. Saw ten or twelve meadow larks on the 28th; shot one for examination; found its crop full of persimmons. Saw the first robins Nov, 1st; shot one; found its crop full of dogwood berries and some small weed I could not name. Same day saw a woodcock, but failed to kill. Nov. 5th saw the first flight of wild ducks, flying south. Nov. 10th saw the first flight of wild geese, course southeast. Red and gray squirrels plenty; raccoons and opossums plenty; hares in fair proportion; turkeys fairly abundant, but hard to get at; deer in fair proportion; but the little Bob White is plentiful everywhere. He is a very poor sportsman who squirrels plenty; raccouns and fair proportion; turkeys fairly abundant, but hard to get at; doer in fair proportion; but the little Bob White is plentiful everywhere. He is a very poor sportsman who cannot fill his bag in half a day. I never saw them so thick in my life; but they have a bad habit of taking to the sage grass. Then the trouble begins; if you do not kill your bird instantly, you are apt to lose him.

Now for the non-attractions: First, chills and fever plenty; malarial fever, bilions fever; pneumonia in the fall, and very fatal; rore eyes; plenty of suckes; plenty of every description of ticks; musquitos few or none; hawks plenty. What they call the sickly season lasts from the lat of June until the first frost.

I was all over Yell County, and for that matter the whole of the State; but the place I mean to particularize is Yell County. I was located three miles from Dardamelie, on the military road to Fort Smith. This is in Vall County. And especially do I mean along the Arthropolarization of the state of the stat

whole of the State; but the place I mean to parameter Yell County. I was located three miles from Dardanelle, on the military road to Fort Smith. This is in Yell County. And especially do I mean along the Arkansus bottoms and along the Peti Jean and the Fourche La Gave rivers. I have traveled mostly the whole country over on horsoback. There are no phensants there as we call them here; but prairie chickens are plentiful, as I have seen their eggs sold in Dardanelle for a 'blit' a dozen. There are no game laws in that part of the State. Dardanelle is about midway between Little Rock and Fort Smith.

MINNESOTA-Long Prairie, April 12th.-Ducks made MINNESOTA—Long Prairie, April 12th.—Ducks made their appearance here about the 1st of this month, and have been more numerous than for many years. I have bagged quite a number at odd times, but have no time to hunt, except an hour or so mornings and evenings. But few are bagged, as most of our sportsmen are not provided with decoys and boats to hunt them properly. Mallards and canvas-backs make up a large majority of the ducks, but a good many sea ducks are seen also. N. W.

also. N. W. Towa-Creston, April 9th.—There are lots of ducks, geeso and sand-hill cranes flying north, and quite a number of them light around here. Yesterday I drove over to a small pend in the open prairie, not a quarter of a nile from my house, and got one duck, four grouse and one snipe in an hour—all flying shots and no miss. Shooting from a wagon is now much better than on foot, for birds are not frightened by it so much. The spring is very dry, and I think game will be plenty next fall. Old cock grouse are "booming" loudly every morning around my house, and beat even campaign politicians for noises.

Indiana-Indianapolis, April 18th .- Snipe here in INDANA—Induandpoins, April 18in.—Shiple nere in abundance, and many have been bagged. A splendid outlook for the fishing season. Bass are taking kindly to the hook; several good sized ones have been taken. Ducking has been fair, but no good bag has yet reached your correspondent's ears from around here, but many are being or have been killed in the Kankakee Marshes, about 100 miles north of here.

Being visited by some friends from this city, intent on a day's cock shooting, disappointment scened in store for them, as the birds were in a willow thicket so dense as to preclude all hope of doing any execution. A happy idea struck the Captain, and he proceeded to get a number of step-ladders, which were placed at favorable points around the thicket. Taking their positions on these, the gentlemen had excellent sport which the birds, being flushed, took flight above the willows. It was a novel idea, and illustrates how the ingenuity of man will be successfully exercised against the obstacles with which nature sometimes surrounds him. HOOSEM. HOOSIER. nature sometimes surrounds him.

nature sometimes surrounds him.

Thread-wound Carrinders.—Dover, Del., March 29th.—Some months ago we sent for samples of the thread-wound cartridge cases, not having a great deal of faith in their usefulness, nor believing the high price asked for them would warrant their use. The lirst one we tried was marked for 90 yards range. Used 3drs, Orange rifle powder under two wads, in a 12-bore; loz. No. 5 shot; case held in brass shell, with thin court-plaster, greasing it when dry. The day was cloudy, with a steady cast wind blowing lightly, the water tolerably calm. Paddling up the mouth of Scott's Run, we sighted two black ducks 800 yards ahead. Wishing to get the result as accurately as possible, we advanced swiftly and silently until within as near as we could then judge of 90 yards, and, sighting on the nr arest duck, fired. It never moved. Sticking a pole into the bottom where we shot, we rowed at once to the spot where the dead duck lay, and drove another stake—the water averaging about six feet in depth—then running a line from pole to pole, we found the distance, by actual measurement, 110 yards. We found the marks of but four shots in the bird, two near the eye and two in the breast. The other duck flew off, apparently unhurk. There being no further use for them on that day, they were put saide and forgotten until this morning, when we took them out for a conclusion of the trial. With the 70 yards cartridge, leaded as above, we killed a "dipper" duck in the stream back of our kennels, and tying one end of a cord to the dog's collar, sent him for the duck and ascertained that the distance was 73; yards. The duck's neck was broken and badly form.

Hwing a curiosity to know the effect of a shot at 40 yards, with a 50 yards' cartridge, we sharpened the end of a piece of shingle, 446 inches, and drove it into the top THREAD-WOUND CARTRIDGES .- Dover, Del., March 29th.

certained that the distance was 73 yards. The duck's neck was broken and badly tom.

Having a curiosity to know the effect of a shot at 40 yards, with a 50 yards, eartridge, we sharpened the end of a piece of shingle, 4x6 inches, and drove it into the top of a stump. The wind was blowing hard from the north, and the target was standing east from us. After shooting, we found the thread thrown nearly across the stump, not a shot in the target, and the ground torn by the whole discharge in the side of a slight hill 15 yards ahead of the stump, and on a line six inches to the right of it—a natural result.

We are fully convinced that these cartridges, when properly used according to manufacturer's directions, are a perfect success, and a decided acquisition to the sports man's outfit. True, the price is rather steep; but a few of them must find their way into every shooter's annuntion case when their way into every shooter's annuntion case when their value is fully known. We find no trouble with brass shells used as above stated—have never shot them from paper shells. Would like to hear from others on the subject, having noted but two communications in recent volume of FOREST AND STREAM.

For the benefit of strangers, would say that we have no acquaintance with Messars, Schleber & Co., and no further interest than every sportsman should have in a really good and useful invention so clearly associated with their pleasure.

Another Complaint of Cheap Guns.—Brooklyn, April 17th.—Editor Forest and Stream:—As "A Sufferer" has started the ball rolling in your last issue in reference to gun selling, I will add my experience, and say it is about time that something was done for retail dealers by our manufacturers and wholesale houses, who now sell one gun with a discount off to any one who comes along, as cheap as to a tradesman who has devoted his lifetime to the business. This is not only so as to guns, but also with shells, wads, powder, shot, etc. Allowing the right of all men to do as they please, and to sell their wares at prices to suit themselves, I question much if this is a correct way of business. But "Sufferer" must come to the conclusion, as I have done long ago, that brains, energy and skill without plenty of cash do not always succeed. Another Complaint of Cheap Guns.—Brooklyn,

According to the terms of the match the prize for the flist hest individual score made prior to 2 o'clock was captured by Mr. N. W. Arnold with a total of 46. W. Charles and H. Tyler used military rilies during yesterday's competition, and, by the rules of the handlesp, score an additional two points on each of their respective scores.

AN OPINION ON TRAP-SHOOTING.

accept his challenge and name the stakes \$500 to his \$1,000 for the decept as cantinger and main the states 3 yar to me 3,000 for the following pigeon match: Fifty pairs, doublet reless Long Island rules to govern; with the exception of find and trap for each other, or find substitutes. Match to take place at the Brooktyn Driving Park any time mutually agreed upon within one month from date. I have this day deposited with E. H. Madison, 8d

DANSVILLE, N. Y., March 28J.

WM. KING.

Eleventh match; 20 balls:—Bell 17, May 18, Ridade, 17, Riser 18, Peacock 8, Wilson 13, Jones 11, Taylor 13, Elliott 7, J. E. Graham 17, Register 16, L. B. Cushman 13, Collins 12, Brockway 10, Motter 12. Bell, Ridede, Jones and Graham shot off for first, and Ricele Wort; Register goi second; May and Kiser divided third.

To the credit of Mr. Bell, Rided left before the these research; and had Bell shoot for hm. Bell won it for Ricele, though the (Bell) was also showing for himself.

Twoffth match, 5 balls:—Bell 4, Jones and Graham shot off for second, and Bell won; Secouller, 3, Peacock, 4, Jones and Graham shot off for second, and Bell won; Secouller got third.

Thirtecnti match, 5 balls:—Hell 3, May 1, Wilson 2, Jones 3, J. E. Graham 4, Peacock 1. Graham first; Bell and Jones divided second. Editor Forest and Stream :-

Fulton street, the sum of \$100.

In a March, 1880, issue of Forest and Stream, picked up at random, which number, by the way, chronicles a comparatively light week for trap-shooting, I figure as follows, under the head of "Shooting Matches":—

of "Shooting Matenes":

Whole number of pigeons shot at. 1,209
Whole number of pigeons killed. 559
Whole number of pigeons killed. 550
At the head of some of the scores I notice, "Birds very wild;"
'High wind prevailing;" Cold, drizzling rain," etc., which goes to show that March is not par accellence the trap-shooter's month; so it is hardly fair to multiply the results of the week by fifty-two and call the product in just aggregate of a year at the trap. However, for the sake of argument, let us strike a balance:

Whole number of pigeons shot at 62 Whole number of pigeons wisled 44 Whole number of pigeons wissed 18

Quile startling; and Forest and Stream quotes only a small per cost, of the matches going forward. Other sporting journals furnish lists just as long and sungulnary, while the results of many an unwritten field day swells the grand total.

Fourteenth match, 5 balls:-Bell 5, J. E. Graham 3, Peacock 1, May 1, Elliot 2, Wilson 5, Bell and Wilson divided first, and Graham got second.

Fitteenth match, 8 balls, 25 yards:-W. S. Bell 7, J. E. Graham 6, Sixteenth match, 5 balls:-Love 3, Jako Graham 1, Wilson, 5, Seculler 1, May 2, Peacock 2, Hrockway 3, Collins 4, Motter 2, Wilson first, Collins second; Love and Brockway shot off third.

Fourteenth match, 5 balls :- Rell 5, J. E. Graham 3, Peacock L.

Eleventh match; 20 balls:-Beil 17, May 15, Riede, 17, Kiser 15.

Wilson first, Collins Secondary and Brockway won. Seventeenth match, 5 balls:—Mottier 3, Peacock 1, Jake Graham 5, May 2, Elliott 1, Collins 4, Brockway 3, Scoulle 1. Graham and Collins divided first; Mottier and Brockway divided second; May

Eighteenth match, 5 balls :- May 4, Brockway 5, J. E. Graham 5

SORUTZEN NOTES.—The team of the Manhattan Rifle Club, under Captain Aery, which won the Ballard rifle given by Messrs. Shoverling & Daly at Chicago last summer, held their sixth Individual match April Hth for the same at the Union Hill Schuetzen Park. This rifle must be won three times by the same shooter before it becomes his property. David Miller had won it twice already, and some expected that he would be the winner. If it had not been for Chas. Zottler he would have been, but Zettler making 213 points in ten shots he beat Miller, and has won it now also twice.

The New York Schuetzen Corps, Captain Geo. Aery, held a The New York scandidation of the Schuetzen Park, Union Hill, N. J. Shooting was done at the "Bundes" ring-target, each shooter fitting in cach series ten shots at it. The best scores made were, out of 250: B. Zettler, 291; Phil. Klein, 199; Capt. George Aery, 185; J. Radchold, 171; J. Brummerhop, 198; J. H. Lippe Aery, 186; J. Rade 165; F. Wilms, 163.

MAMMOTH RIFLE GALLERY .- Boston, April 16th .- Better shoot MANNOTH RIFLE GALLERY.—Boston. April 1801m.—Better shooting has never been done at this favorite resort for marksmen than during the past week; and in fact, so far this month, the shootine has been of the highest order. Mr. W. H. Harrison has added to his record one more clean score, making six so far this month, which places him to the front for the extra prize of \$20 for the highest number of clean scores. Mr. U. A. Pollard has also made two more clean scores this last week, making him three full scores of ar this month. In the second class the shooting has been splendid Mr. Geo. F. Elisworth, of the Gardner Rifle has been stable last with two clean scores, and three selondid 28%. Club, heads the list with two clean scores, and three splendid 39's, Club, heads the list with two clean scores, and three splendid 20's, followed by Messrs, Farrar, McKenzie, Winship, James and Swift, ranking in the order named. Last month Messrs, Harrison and Richardson were tie for the first and second prizes. In shooting off the tie Mr. Harrison made 122 out of a possible 200, winning the Instruction, Mr. Richardson followed closely with some very fine shooting. There was also a tie for the third and fourth prizes bestooting. There was also a tie for the third and fourth prizes bestooting. shooting. There was also a tree to the tent and other phase tween Messrs. Arnold and Merrill, Mr. Arnold winning with 183 out of a possible 230; Mr. Merrill making 184. The subjoined summary shows the capital shooting during the week at the Mam-150 feet; rounds 8; possible 40; five scores to win, or pos-

CREEDMOOR-April 17th .- Two matches at Creedmoor to-day were shot in the teeth of a heavy gale, both at long and short ranges. The event of the morning was the Remington Gold Match ranges. The event of the morning was the keningion tool status of 20 shots each at 800 and 1,000 yards. Mr. I. L. Allen had won the prize, which is \$300 in gold, in two previous competitions, and narrowly missed making it his property yesterday, as he scored the same total of points as Mr. Homer Fisher, whose record was, the sains total to points a wind the however, judged the better by "inverse order of shots," as he closed his string with two "bulls," Some of the gentlemen were obliged to use 17 points of wind at 900 yards. The best scores

America having accepted an invitation from the Irish Rifle Asso-ciation to shoot a return match in Ireland in June or July next, desires the co-operation of the riflemen throughout the country

in selecting a team to represent this country in the match, and in providing the funds necessary to pay the expenses of the under

"It is the intention of the National Rifle Association of America to send a team which shall be truly national in character, and which shall represent all sections of this country as far as possible. The team will consist of a captain, six men and one reserve. one. The team will be appointed by the National Rifle Association, and when appointed shall have full authority over the team, subject to supervision by the National Rifle Association. Each person selected as a member of the team and reserve will be required to sign the following agreement, and such signing shall be a neccondition to become a member :-

essary condition to become a member:—

"On condition of my being admitted as a member of the American Team of 1889, organized to shoot a return match with Ireland, I hereby agree to conform to such rules and regulations of the conformation of the as may be established by the National Rifle Association of America and the captain of the team, for the government of the team, and to obey all instructions and commands given by the captain while I remain a member of said team. That I will go to I reland with the team and shoot in the match, or act as reserve, as the case may be.'

"Four competitions for places on the team will be held at Creedmoor on May 11th, 12th, 14th and 15th, at 11 A.M. each day; fifteen shots at each of the distances of 800, 900 and 1,000 yards, without sighting shots or previous practice on the day of the competition. At the conclusion of the four days of competition the three competitors having the highest aggregate on any three the three competitors making the magness aggregate of any three days out of the four shall become numbers of the team, provided that if in all the competitions held throughout the country for places on the team not more than seven men are selected. If more or less than seven men are selected. compose the team will be decided upon as hereafter announced.

compose the team will be accorded upon as accentification or "Any rifle associations or clubs throughout the country may hold competitions on their own ranges or such tangeas the habitually use for practice, for the selection of members of the team, and such competitions need not conform to those established above for the competitions to be held at Creedmoor.

"It is one of the conditions of such selection that each club or association sending such representative or representatives as they may select, will pay their expenses while members of the team, or that the individual who becomes a member of the team pursuant to these conditions will pay his own expenses as far as requirof by the National Rifle Association. A fund will be ruised, how-ever, by the N. R. A. b, by subscription or otherwise, that it is hoped will be sufficient to pay the entire expense of the team. "Each association or citub deciding to hold such competition must notify the National Rifle Association of such intention not

must notify the National Rine Association of such intention not later than April Soit, and its such notification will state how many representatives they intend to send.

"Bach competitor must be a native born citizen and bona fide resident of this country. The representatives selected will meet on the range at Creedmoor, duly provided with certificates from

on the range at creamon, and provided was a consider a road their respective clubs that they have been selected as their representatives, at 11 A. M. on Tuesdey, May 18th. "In case more than seven representatives from the various clubs, including the three members selected at Creedmoor, shall present themselves on the above date, they shall then hold three present themselves on the stoye dute, trey spaint tear into after competitions at Orcedmoor on the 19th, 20th and 21st of May, similar to the four competitions held at Orcedmoor on the 11th, 12th 4th and 15th of May, and the seven whose stores on any two of the three days shall aggregate the highest, shall form the team and reserve, subject to the following:

"In case any member so selected shall be deemed unditted for

a place on the team, he may be displaced by a two-thirds vote of the team, reserve and captain, and his place filled by some other competitor, who shall be selected by a majority vote of the remainder of the team.

"Should a less number than seven present themselves at Creedmoor on May 18th, then the Board of Directors will fill the vacant places on the team in such a maner as may seem best and most desirable. After the final selection, the members of the team and reserve will devote such time to practice, previous to their departure, as may be practicable.
"The team will sail about June 5th, and need not be absent

more than forty-five days. The expenses need not exceed \$350

per man."" April 20th, 1880.

The 14th of September has been decided on as the date for the beginning of the fall meeting at Creedmoor. The Psima matchift there be any this year, will be held Sept. 28th and 29th.

A. H. Weston, the Assistant Secretary of the N. R. A., is henceforth to have powers co-ordinate in many respects with those of Directors, and he will report from time to time rifle matters coming under his observation to the Board.

-Mr. John H. Bird, who rendered such good service in 1875 when funds were needed for the team trip to Ireland, again come forward, and with the Seventh Regiment Dramatic Association proffers a benefit performance.

ZETTLER RIFLE CLUB.—New York, 207 Boucry, April 18th.—The seventh competition of the Zettler Rifle Club, for the Brown Medal, was shot at Guttenburg to-day; 30 shots; 200 yards; ringtarget; any rifle; scores as follows:

PENNSYLVANIA-Philadelphia, April 16th.-This afternoon at the PENNSYLVANIA—Philaddphia, April 16th.—This afternoon at the Stockton Rithe Range the Remington Match, open to all comers, was contested. The terms of the match, as formerly stated, were as follows: First competition for a Remington Creedmoor ritle, value \$100, presented by Messrs, Remington & Son; open to all comers; 200 yards: 10 scoring shots; weapon, any ride except nuzrile-loader; entrance fee, \$1; ride to be won three times, not necessarily consecutive, before becoming the property of the person winning the same. The highest scores made were as a solutions.

Washington, D. C.-Columbia Rifle Association.-Last Sat-WASHINGTON, D. C.—COLUMBIA MITLE ASSOCIATION.—LGST Sat-urday, the 17th inst., was the second day of the club's spring series of long-range shoots, and the first of five for the competi-tive selection of a marksman to represent the Washington organ-ization in the approaching contest with the Irish team. The weather was badly against the attainment of even decent scores, and Frank Hyde, the guest of the association for the day, who entered and shot with the Columbias, found the gusts of Benentered and snot with the Columbias, round and guess to ben-ning's fully as treacherous as those of Freedmort. A strong shift-ing wind and a glaring light detracted from the comfort of the marksmen and the records of the club. Seven men, two of them ill enough to have been in bod instead of fighting the wind, op-ened the match at half-past two o'clock. The wind speedily dis-

posed of all except Dr. Soott and Frank Hyde. The Doctor started well, and before he met with a reverse had scored ten consecu tive bulls, and thence orward dropped only two points, leaving him with 73 to his oredit. Three red-birds at the close pulled down Mr. Hyde's otherwise splendid score to 70, while none of the others passed 46. On the marksmen moving back to 900 yards, they found the gale even more boisterous, and guns and faces they found the gaie even more consterous, and guns and neces were covered with the driving sand-biast, the 11 o'clock wind needing from six to nine points' allowance. Even the veterans felt relieved to get into the sixtics, and all had nore or less of magpies and ravens. Dr. Scott, by careful holding and steady attention to the vagaries of the streamers and wind-vane, rolled up a most creditable 60, while Mr. Lauritzon fought manfully for the a most creditable 69, while Mr. Lauritzen fought mantully for the second place with a hard-won 63, beating Mr. Hyde and Mr. Laird cach by one point. On beginning at 1,699 yards it became a foregone conclusion that the first and second places, carrying the prizes with them, lay with the Doctor and Mr. Hyde, but it was still anybody's game for the third place, with Mr. Lauritzen a little ahead. The last stage was disastrous to all, for a dropping intic anead. The mst stage was disastrous to an, for an oppose wind with furries, and a changing light flattened out all calculations, and Mr. Adea and Dr. Scott were the only men to get above 60. An unaccountable miss prevented Mr. Hyde from keeping them company. The following are the three leading scores in

| I | Dr.S. J. Scott 800-5 900-3 1000-3 | 5 5 | 5 4 | 5 4 4 | 5 4 3 | 5 5 5 | 5 4 | 5 5 | 5 5 | 5 4 | 5 4 | 4 4 5 | 5 5 5 | 5 4 4 | 5-73 $5-69$ $3-63$ 205 |

OHIO .- Tiffin, April 14th .- The Tiffin Rifle Club held a match on UHIO.—Thun, April 14th.—The Timin Rifle Club helds match on the 13th inst., and shot for a target-rifle, made by P. A. Reinhard valued at \$60. Distance 224 yards; muzzle and shoulder rest; ring-target, bull*eye-ye 2 inches, enter 3i, inner 5i, outer 12 inches; 5 shots each; possible count 25; Globs sights used. The wind blew a gale diagonally across the range all day. Rifle was won by J. Sourwine, of Attica, Ohio. The following were the highest scores made:—J. Sourwine, 2i; L. Seewald, 23; L. W. Parener 29; Ch. W. Baringer.

blighest scores made: J. Sourwine, 21; L. Seewald, 23; L. v. Rogers, 22; Ch. Huber, 21; C. W. Springer, 1, that Mr. Rogers, 1; I wish to say to "Target," of Elikhart, Ind., that Mr. Rogers, of Tiffin Rifle Chib, made a string of 19 inch in 95 shots, 22 yards, with Globe sights, muzzle and shoulder rest, at the annual totraument of the club, using a rifle made by P. A. Reinhard, and winning \$40 in gold offered as a special prize for the shortest string made Виск Ѕнот during the shoot.

"A HUNTER'S EXPERIENCE."-Virginia City, Montana, March "A HUNTER'S EXPERIENCE." "Virginia City, Montana, March Zith.—Editor Forest and Stream:—Please correct following errors in the article "A Hunter's Experience," in Issue of March 14th. In fifth line from bottom of first, column for "25," read "2". In first line of second column, for "fell with one hundred and fity yards, and where shot," read "fell within one hundred and fity yard from where shot." In first line of paragraph next to the last, for "The fact of a rifle with a diving the center," etc., leave out "with a." Where "antelopes, buffalos, bears, ciks," eccur out "with a." Where "antelopes, buffalos, bears, clks," occur read antelope, buffalo, bear, clk."

NOMS DE FURIL.-Boston, April 10th.-Editor Forest and Stream NOMS DE PCSIL.—Boston, April 10th.—Editor Forest auto stream.—I have carefully read * Nick's "article upon * Palse Name." He wields a free lance, speaking for the press, but is very cureful to hide himself behind a bogus name, which be calls his nom de plume. Has not a gentlemen that shoots as much right to a nom de fusil? Be consistent, Mr. "Nick," and do not ask your neighborn out to do what you think is right to do yourself. We all conhor not to do what you think is right to do yourself. We all concede that custom gives you the right thus to hidd yourself, and many lines are written under that cover which would have been left unwritten, had the writer's full name to appear. We do not think you are a felon, or a bad man, that yould cheat or steal, for using a nom de plume. I write in the full knowledge of, and respect for, the influence of the press. I know that a paper is not run for fun, but for dollars and cents, and what will make "gold" is put into its columns. Reporters are employed to gather the information for the benefit of the paper, but not to run a rifle range or a rifle Association. When we showly, we do so because we love it and for health, not for the particular interest of the public, unless it is a match between different localities or because we love it and for nearth, not for the particular interest of the public, unless it is a match between different localities or clubs. I agree with Mr. "Nick" that we should know who the party is, when we have the right to know him; but at other times party is, when we have the right to know him; but at other times that him shoot under his norm de fusit. It is much easier for the ridic world to find out who "John Smith" is, than who Mr. "Nick!" is. I hope that the New York papers will not sit right down upon ride shooting in America, because some rifleman uses a "bogus name" at Cree'moor. Gentlemen have private reasons that are perfectly honorable in using: a now do fusit upon their local ranges, and they should be respected. Col. Bodino's reputation for honor will never be tarnished, for we all know him and will eyer respect him.

WM. H. JACKSON.

THE FIT OF BULLETS .- Camillas, N. Y., April 5th .- I wish to THE FIT OF BULLETS.—Connect on 1. 1. April 30.— I weak mow just how tightly a naked conical bullet, 38 cal., with two cannellures, lubricated, and weighing 189 grains, should fit the bore of a breech-loader. I have a Wesson and a Winchester rife of that caliber, and I reload my shells. Please do not ask me why I do not "assume at once that the moids turnished by the inanufacturers are just right, and be satisfied," because I shall assume facturers are just right, and be satisfied," because I shall assume nothing of the kind, and with the good reason that of sovral molds no two make bullets of precisely equal callber. One can be pushed through the barrel every easily by a hand-wiper, and atter the operation shows only very trilling indentations made by the lands, and another nacked builter from another mold can only be driven through the same rifle with several sharp mallet blows. I have also ascertained that in propagate carridge balls of different makers there exists the same variation. Will you kindi settle the question in your next issue, and oblige myself an

Arenda?

In long range breech-leading rifles, where leading from the muzzle is employed, the patched bullets would drop down the barrel, and in the old muzzle-leaders a gentle pressure with a rod was sufficient to ram them down on the powder. There is no advantage gained in having a conteal bullet so tight-fitting that it must be driven through the barrel by mallet blows, and there is the disadvantage of increasing the liability to leading.

EXPRESS BULLETS.

INDIANAPOLIS, IND., March 81st.

Editor Forest and Stream :-Having noticed for some time discussions in your valuable paper on the destructive effect of express bullets, I desire to add my mite. Leaving out the question of accuracy of hollow-pointed bullets, I feel confident the shock produced in a living body by impact of clongated butlets moving with the same velocities, would be decidedly in favor of the hollow-pointed projectile, provided both were moving with very high velocity. Linclese a sample of hollow-pointed butlet that has been fired into a bank of sawdist. You will notice the resemblance to a button-shaped nushroom. In order to assertain the action of hollow-pointed butlets when striking bodies of low or slight resistance. I took several 45-al. cartridges (bullets weighing 405grs.; charge powder, 70grs.) and bored a hole in the points of the bullets should one-cighth of an tach in diameter, continuing in the direction, or ather prologation of the longer axis nearly seven-cighths of body by impact of elongated bullets moving with the same veloc rather prolongation of the longer axis nearly seven-eighths of nather prolongation of the longer axis nearly seven-eighths of an inch; these holes were then filled with neited becswax. I then filled a packing-box, about eight feet long by three feet wide and three feet high, with loose sawdust. Standing about twenty feet from an open end of the box, fired into the sawdust. Found upon examination the penetration in all cases was between five and six feet, and the builtest took the shape of the inclosed sumple (button mushroom). The service builted fired into sawdust, as and distance with same charge of powder, had the same penetration, but the builtest were very little disfigured, showing plainly the mark of the rifling. I also obtained the same results by firing into this box filled with snow. Found very little direction to the builted with snow. Found very little directions of the rifling of the same results by firing into this box filled with snow. Found very little directions by the matrix of the limit of limit of the limit of urement or change of form of the hollow-pointed builet would be much greater when striking them. When exceedingly high velocities are obtained, this change of form would be complete the expanded disk formed by bullet spreading out from the point remaining in the body of the animal, and the base of the bullet remaining in the body of the animal, and the base of the bullet passing on beyond, possibly through the body, producing all the effects of an explosive bullet; for this bullet, from the time of impact, continues to penetrate and expand at the point, until the expanded portion, from loss of velocity due to the increased surface of resistance, comes to a state of rest, or nearly so, and is itself penetrated by the solid base. At the time of impact, the beeswax becomes melted from heat generated by the resistance of the air and the body struck, and we then have a column of fluid confined in a cylindrical space subject to great pressure. This pressure, being equal in all directions, causes the bullet to expand in direction of line of least resistance of the material This pressure, being equal in all directions, causes the bullet to expand in direction of line of least resistance (of the material from which the bullet is made) viz; at the point in a plane perpendicular to the longer axis. By this expansion continuing, the eylindrical hole in the bullet becomes cone-shaped, with the base of the come at point of bullet. The calargement at the point of the bullet increases the surface of resistance, and owing to the non-elastic quality of lead, the particles in expanded portion lose velocity faster than the particles in the base. The base pressing more and more upon the expanded portion as the difference in the velocities becomes greater, changes the concave-expanded point, irst to a plane, then convex surface, and this change of point, first to a plane, then convex surface, and this change of form will continue until the difference in velocities of the particles in the expanded portion and particles of solid base becomes sufficiently great, when the base will penetrate the expanded portion and pass on. By using a bank of sawdust as a butt, and successively reducing the charge of powder for same weight of hollow bullet, a point will be reached at which there will be no change of form in the bullet. If, now, the charges of powder are regularly increased, it will be found the change of form becomes greater and greater as the velocities increase, until a maximum is reached, which, as indicated, will be a separation of the bullets into two parts, a circular disk, and the solid base, the latter nentrating beyond the disk. Parties designing to invest point, first to a plane, then convex surface, and this change of of the bullots into two parts, a circular disk, and the solid base, the latter penetrating beyond the disk. Parties desiring to investigate, will find cither material (sawdust or snow) suitable. They can be packed in sections of stove-pipe two or three feet in length. A short of thin packing-paper placed between each section will assist wonderfully in finding the bullets (by indicating which section contains the bullets) after they have been fred. Those desiring to ascertain the effect or action of different forms of rilling (barring accuracy) will findilghts now admirably adapted to this purpose. The penetration in all cases will not be great, and such of the bullets are precovered in the perfect form they left all of the bullets can be recovered in the perfect form they left the muzzle of the gun-GREGORY.

Non-Sticking Shells.—San Dimae Durango, Mexico, Feb. 28th.—Editor Forest and Stream:—I have been much interested in the discussion going on through your columns in regard to "everlasting shells." Possibly my experiences may be of benefit to those unfortunate gentlemen from Texas, who have suffered from sticking shells in the Ballard and other rides. My brother and I each own a Ballard; one (mine) using the Berdan shell, 4477, the other, everlasting, 44-100. Wonderful to state, with proper care in loading, the shells never slick in either ride—without said ourse they will stick every time. The rules to be observed in loading are simple and custly carried out. Ist. Before reloading, clean each shell carefully Inside and out, until it is bright and Trea from all signs of burnt powder or verdigris. 2d. Mold the bullets with the utmost care, seeing that the bullet mold is shut light every time a sing is run. 3d. Load the shells on that the ball-does not crowd the powder, but barely reasts on it, when set at the proper depth in the shell. Don't use bullots that enter the shells with difficulty. If the molds will make no other kind, fire them Non-Sticking Shells .- San Dimas Durango, Mexico, Feb. 26th proper depth in the shell. Don't use bulled a that effect we asserted with difficulty. If the molds will make no other kind, fire them but and buy others of the proper size. This, by the way, is a very common fault in factory-made builde molds, as I know from uncortunate experience. 4th. Clean the chamber of the rifle carecortunate experience. 4th. Clean the chamber of the rifle cureduly; if the cartridges are for hunting, dip them in some very not labricant, so that shell and bullet will have a very thin coating of grease, extending back say half an inch on the shell. If there all this the shells still persist in sticking, why, for my part, I give it up. They have some kink in them that has not yet come elight in our experience. Possibly too quick powder will make he shells expand, quein sube? We always use Hazard's FU or FFG when attainable. I have owned and used many different siftes during the past ten years, including Sharps, Remington, Winchester, Springfold, imported Stevens, etc., and for a sportsman who can only afford one weapon I consider the Ballard shead

of them all. Since the fall of 1876 my Ballard has been my com panion from the dripping plue forests of Puget Sound, to the oak and cactus-covered randones of the Mexican cordilleras. In cance and encuis-covered condones of the Mexican cordilleras. In cance or saddle—wherever there was a show to get meat, in short—I've always packed her; and whether shooting at a buck "as big as a barn," a blue grouse in the top of an Oregon pine, or a Mexican fox-squirred curiously peering from some lofty peech at the "Gringo" interloper on his domains, I've hit or missed with the comfortable feeling that whatever happened the rifle was all right in every particular. And I've not yet found game so big or so little that she couldn't attend to their case, and give a fair accumul of heavelf. I've accomplished one feat with this rifle ant of herself. I've accomplished one feat with this rifle could decised. The accompanies one leat with this rise lately, that I had considered heretofore as a funder's yarn, viz.
"barking a squirrel." A jackknife, with a screw-driver blade, is amply sufficient to do all the adjusting necessary during a three-months' hunt, and—but I'll stop, for fear the censorine; gentleman, who objects to "this kind of thing, you know," will get after me. EL AMERICANO.

THE NATIONAL YACHTING ASSOCIATION.

T the meeting of the convention, held April 14th at the St Denis Hotel, this city, the minutes of the previous meeting ore read and approved. The following clubs had at that time lopted the constitution: Salem Bay Y. C., Yonkers, National, pleago, Columbia, Empire, Buffalo, New Jersey, Hudson River, Oshkosh, Quaker City and Payonia.

Osnicosa, Quaker City and Favonia.

Upon motion of Mr. Rice the Newburyport Y. C. and Lynn Y
C. were also to be considered admitted, they having appointed
delegates and signified their intention of joining. A committee
of five was selected to consider and report upon the receipt of all of five was sended at consider an Teport upon the recept of all further neceptanees sent in by clubs whose time of meeting had not yet enabled them to commiscate their adoption of the constitution. The committee is composed as follows: David Hull Rice, S. P. Ku, S. P. C.; Hent, Budjer Y. C.; R. S. P. C.; Hent, Buddon Kyer B. Freeman, Hudson kityer Y.C., and the President, Com. Dilworth, and Secretary John Frick. of the convention.

of the convention.

A resolution was passed instructing the Executive Committee
of twelve to take steps, when appointed, looking toward a full
and creditable display of the yachting interests at the coming
World's Fair in 1883. Yacht builders and others are to be requested to contribute specimens of their work in the way of a
cutual yachts, models, etc., so that the attention of the general
public may be drawn to the sport. Votes of thanks were tendered
to Iten-Com, Sumichrast, Royal Nova Scotia Y, S., for the useful
and interesting data furnished the convention; to Mr. John Frield
for the effective manner in which he carried out the arduous
duties of Secretary, and to the morphice of the St. Denis Horle for the effective manner in which he carried out the arduous duties of Secretary, and to the proprietors of the St. Donis Hotel for the use of their parlors. The Association having been estab lished permanently and all provisions for its future continuance having been made, the convention was adjourned size die. The Executive Committee of twelve, as soon as halloted for, will now take charge of the affairs of the Association in accord with the resortions of the constitution. provisions of the constitution

EASTERN BRANCH N. Y. A.

A T THE meeting held in Boston, April 16th, with a view to A THE meeting alocal organization, April bith, with a view to by delegates: Lynn Y. C., Newburryport Y. C., Salem Bay Y. C., Haverbill X. C. and Washington Village Y. C. In regard to some of them joining the N. Y. A. It was determined to refer to equestion back to the cluids for definite action. As the meeting was tion back to the close for definite action. As the meeting figure only an initial one it is thought other Eststern cluster mental principles it is granted on all sides that the formation of an Eastern branch to supervise racing from Cape Cod to Eastport is a necessity of the times. The meeting was much better attended that ne previous call of a similar nature, and in the ord we trust all interests. will pull together for united action. A committee on rules and by-laws was appointed, consisting of Mossrs, T. Talbot, Newbury-port Y. C.; E. P. Brown, Haverhill Y. C.; Howard Iennis, Lynn Y. C.; E. Lanning, W. V. Y. C., and David Hall Rice, Salem Bay Y. C.; E. Lanning, W. V. Y. C., and Divid Hall thee, satem Bay Y. C. Also a committee on union or local regatias, as follows: W. P. Parker, Vice-Com. Salem Bay Y. C.; W. C. Thompson, Com. Newburyport Y. C.; Howard Dennis, Fleet Captain Lynn Y. C.; F. A. Daniels, Vice-Com. W. V. Y. C., and W. M. Dresser, Havorhill Y. C. These cemmittees will meet at Young's Hotel, April 21th, at 4 p.n. for deliberation. The meeting was then adjourned subject to the call of the President.

NEW SCHOONER.—Decker, of South Brooklyn, has finished a handsome schooner for ex-Commodoro Munseil, Atlantie Y. C. The model is by Decker. Her dimensions are: Length, 73ft. over all, 63ft. keel, 8ft. beam; depth of hold, 7ft.; draught, 4ft. 6in. The dimensions of her spars are: Mainmast, 65ft.; foremast, 63ft.; bowsprit, 43ft.; mainboom, 43ft.; foreboom, 22ft.; foregaff, 2fft. maingaff, 22ft.; foretopmast, 23ft.; and maintopmast, 31ft. Bowmangant, zat; 10reonmast, sat., and manopmest, 5ff., Bow-spirt outboard, 35ff.; forestay sets up 4ff. out on the bowspirt from this to the libstay is 14ff.; from 10t to 15jing illustay, 11ff., and 3ff. pole. The craft has a flush deck, with the exception of the cabin house, 15in. high. She will be piaced in racing trim about the middle of May, and will go to Newport on her trial trip.

YACHTING NEWS

SOUTHERN YACHT CLUB.—Officers for the year: Commodore, E. J. O'Brion; First Vice-Commodore, A. A. Maginnes; Second Vice-Commodore, E. Harris; Treasurer, J. B. McConnell; Secretary, A. H. Harris. The club has now 477 members, and will give four regattas this season.

SAN FRANCISCO YACHT CLUB. - Officers for the year : Commo-

SAN FRANCISOO YAGHT CLUIL-Officers for the year: Commodore, C. H. Harrison; Vice-Commodore, J. D. Spreckels; Secretary, C. G. Vulc; Treasurer, H. Gutte; Measurer, M. Turner, Trustees, Howes, Weiner, and Hamilton.

Racing model yachts are rapidly increasing in this club, many experiments being tried with the hope of drawing lessons therefrom, to be applied on a larger scale. Dr. Merritt proposes to cruise among the South Sea Islands, this year, in his schooner Cazo. His cruisedown the costs last season was a great success.

NEW YORK YAGHT CLUB.—The club has adopted a new pattern for their cas, similar to that of the midshipmen of the Reval

NEW YORK YACHT CLUB.—THE CHU has adopted a now pattern for their cap, similar to that of the midshipmen of the Royal Navy; exit ye ancient marine cavalry affair. The following new members have been elected: W. L. Scott, Eric, Pa.; E. Robert, J. Wy, Blatchford, D. Hall, G. F. Randolph, F. Peabody, H. E. Packer, R. H. Rathbone, C. R. Fliat, J. P. Earle, and F. Hathaway.

N. Backford, D. Han, O. F. Rattioppe, F. Penlody, H. E. Packer, R. H. Rathounc, C. R. Pint, J. P. Earle, and F. Halbaway. QUAKER CITY YAGIT CLUB.—The entries for the spring races consist of the following: First class cabin-yachis, from 300 a381t. w. i.: Columbia, Albert Wood; Copuette, John Vanderspilce; Clura, C. Verga; Comet, Joseph Rennedy; Geo. W. Fatirman, John Pomeroy; Kingdon Goddard, John Mintz; Minera, Wm. Crouse; Specing, James Campbell; While Wing of Chester), Paul Klotz B. Gond class, sloops under 30ft, w.l.: Chris Gallager, Robert Wilble; Eliza —, Henry Stark; Lallie —, Godfrey Crouse; Stella —, Chartes Magce; M. H. Thomas, James Bradshaw; Quay —, Wm. S. Douglass. Third class, open boats, between 20 and 30ft.: Adelphia, George Campbell; Blanca, George Hillman; Canden, Wm. Middleton; Eddie, James Collins; Post, Henry Willard; Sappho, Painter. Regatta Commutee: Commodore A. P. Bancroft, Chairman: Vice-Commodore, Charles B. Magce; Rear-Commodore, Kobert Riddle, Jr.; Lawrence Coleman, Robert Baird, John McCormick, and Robert P. Thompsen, Secretary.

Eurßein A. Vages Culbs.—The E. Y. C., of San Francisco has

EUREKA YACHT CLUB .- The E. Y. C., of San Francisco has elected the following officers: President, Harry D. Neal; Vise-President, Louis Moran; Teasister, Frederick Wallace; Finan-cial Sceretary, James D. Smith; Recording Secretary, John M. Malcolm; Sergeant-at-Arms, Harry D. Benner; Commander, Wil-liam D. Kramer.

NAHASSETT YACHT CLUB.—This club, formerly with headquar-ters at Nahant and Cobasset, has voted to disband.

ters at Nahant and Cohasset, has voted to dishand.

SOUTH BOSTON YAGHT CLUB-"Olliers for the year: Commodore, John M. Charnock; Vice-Commodore, Dr. R. Dishrow; Fleet Captain, Alexander Kidd; Secretary, William Morris; Treasurer. Thomas Christian; Measuror, John Winnlatt; Trustees, A. K. Roberts, Darid Whiless, William Thompson; Regatta Committee, James Donovan, William Morris, James Bortram, George F. Kenney, Alexander Kidd, George Martin, M. J. Driscoll. The damage done to the club-house by fire is being repaired.

QUINGY YAGHT CLUB.—Officers for the year: Commodore, John Q. Adams; Vice-Commodore, A. J. Clark; Fleet Captain, Joshua Binney; Secretary and Treasurer, George W. Morton; Measurer, Dimey, secretary and treasurer, George W. Morton; Messurer, Peter B. Turner: Regatal Committee, the Commodore, James T. Penninam, E. B. Souther, George W. Morton and B. F. Bass. A number of new boats have been added to the fleet, a cat owned by Win. Amory, one by Mr. Cunningham, both built by Maybury. Mr. H. H. Faxon is having a cat built by Abraham Lelois and Mr. Chas. F. Adams, Jr., has bought the Waif from Messrs. King and Clark. The minimum limit for a yacht's length is to be 15ft., and all yachts of 30ft. and above in length constitute a special class; and all yachts are allowed to carry gaff topsails in races.

and all yachts are allowed to carry gaff topsails in races.

DOROMESTER YACHT CLUB.—Officers for the year: Commodore, F. B. Peabo 'y: Vice-Commodore, S. G. King; Secretary, L. M. Clark; Treasurer, A. J. Clark; Fleet Captain, G. S. Rice; Measurer, H. Davenport; Trustees, C. E. Folsom, W. H. L. Smith, C. H. Nute; Regatta Committee, C. Barnard, C. H. Whiting, R. F. Bolles. The club now has eighty-five members, and the following craft have been added to the fleet: Unitine, center-board sloop, Benjamin Dean; Baby, center-board eat, H. K. Norman Bab) White, keel sloop, A. A. Nickerson; Multie, center-board eat, W. H. Nicholson; C. J. Welle, steamer, Thomas Mauning; Advience, keel schooner, C. Plaff; Siren, center-board sloop, H. S. Keith; Yiking, keel sloop, S. P. Freeman; Fammy, center-board sloop, Henry Bryant; Sappho, steamer, George H. Brooks, Shadow, center-board eat, F. Bacheller; Eche, keel sloop, Keith and Benyon; Imperia, center-board op, C. A. Parter; Yimbus, and Benyon; Imperia, center-board op, C. A. Parter; Yimbus, and Benyon; Imperia, center-board sloop, C. A. Parker; Nimbus, center-board sloop, King and Clark; Fiona, center-board sloop, William Gray; Bristol, center-board cat, J. Sevor; Elf, center-board cat, W. P. Barker: Dream, center-board cat, A. W. Dowey.

Newfort Yacht Club.—The club-house will be renovated—omething much needed—and the usual programme of races is

Buffalo Yacht Club.-Editor Forest and Stream :- This club netruction of a club-house, and a fair sum has already been secured. Plans are now in the hands of an architect. The louse is to be built on spiles, just inside the stone breakwater. The membership is increasing rapidly, eight new applications having been made. Three new yachts, two sloops and one schooner, are now building for the citu.

C.

SOUTH CAMBEN YACHT CLUB .- Officers for the year: Commo dore, Win. Harper; Vice-Commodore, J. seph Wroth; Rear Commodore, John R. Conklin; Secretary, Win. Davis; Treasurer Jacob Gnang.

"ATLANTIC COAST PILOT."—The second edition of this valuable work has been issued from the United States Coast and Geodetic Survey, Carlisle P. Patterson, U. S. N., Superintendent, The coast line included in the charts and sailing directions stretches from The included in the charts and sailing directions stretches from Eastport, Me, to loston. Fog signals, tides, currents, variations, life-saying stations, etc., make the volume a necessary part of a yacht's library, especially for these crusting East. The price is so low, \$3.50, that it is a wonder how anything so complete and flushed can be offered at those figures. To be had of all dealers in nautical instruments.

The TOPOPHONE.—The topophone is a new instrument, designed to be used on shipboard, by which the exact direction of sounds emitted by for horns or fog helis may be promptly determined. It was found, in actual experiments made for the Lighthouse Board, that the pointer of the Instrument could be easily brought to within ten degrees, or less than one point of the true ction of the sound, which is sufficiently accurate in the p tical use of the apparatus.

GOOD FOR THE LIGHT DRAFTS,-The construction of a canal across the narrow neck of land separating the waters of Nan-tucket Sound from Massachusetts Bay, which has just been com menced, will obviate the dangerous and tedious passage for coastssels around Cape Cod. Its whole length will be seven and miles, and its cost between two and three millions of dollars.

AROUND THE WORLD. The steam yacht Lancashire Witch, Su AROYND THE WORLD. The Stellin yard, Lemmand 1. 23 days Thus, Hesketh, Bart., arrived at San Francisco Sthult. 23 days from Yokohoma. She left Cowes, England, Jan. 11th, 1879, and sailed direct for Montevideo; thence, after a stay of a few weeks, said i direct for somewhat, in the carter a say, v. axes, and a doing the rugged cost of Patagonia. The Faikland Islands were visited, and then the course was shaped for Natal. Here were went to the frontier as a volunter against the Zulus, and readered efficient, service to his country. After the campaign was over the Wich steamed for Malagassear, where the party on board over the field for several weeks. Through the Mozambique Channel once more to the mainland, on a hunt after hippopotand, zedwas, girafics, etc., and then to the Seychelle Isles in the Indian Ocean. After making a landing at Maurifius, to view the grave of Paul and Virginia, the yacht passed down the Straits of Fundarta, putting in at Bankok in Slam. Another huntifiland of several weeks' duration was organized. From Bankok the run to Nagasaki, Japan, was made direct, and after traveling through the Islands, and rejoining the yacht at Nokohoma, sall was set for San Francisco. The voyagers were hospitably received by the S. P. Y. C. The Lanca-kire Wich will make a cruise among the South Sea Islands, and may not return to England before next year. She is built of wood, and rigged as a three-masted topsal schooner. Length over all, 150t; beam, 26tfc, and will steam eight knots on a consumption of 4t tons coal per 2t hours, the entrines boing compound. Her bunkers hold 20 tons. She is comed the field for several weeks. Through the Mozambique engines being compound. Her bunkers hold 90 tons. She is commanded by Capt. Lafelsen.

GONE SOUTH .- The sloop Reging having had her spars cut down GONE SOUTH.—The shoop teginal maying has bee spars extraord has gone for a short cruise down the coast with her owner. Com. W. A. W. Stewart.—The schooner Glylic, recently purchased by Mr. Anson P. Stokes from Mr. W. Brooks, has likewise salled for the West Indies, with the owner and family on board. Capt. Belmont remains in charge.

THE MIDGE.-This little sloop, belonging to Mr. Islin, has been from to work excellently with her new keel and lead. She is as stiff as the proverbial church steeple, and much roomler below, besides being safe from capsizing and abler in rough water.

LECTURES ON CANOLING.—Mr. A. H. Siegfried, of the St. Paul Plancer Press, has been delivering his lectures on Life in the Camp and Canoo to large audiences, and is doing much to popularize the use of the paddle.

NEW MOTOR, -- Says the Graphic: "Two Pittsburg inventors, who in 1878 worked out successfully an old idea, which had been who in loss worked our succession area warehouse at Ruigers and Cherry streets, where they recently exhibited what they call the 'mammoth motor.' It comains of a boller and high-pressure engine such as are ordinarily used for steam, except that they are of greater strength, with a condenser and a small iron they are of greater strength, with a commonse and assume for tank, the latter containing a mixture of crude petroleum and bi-sulphide of carbon. The vapor of bi-sulphide of carbon has long heeu experimented with as a motive power, but its great strength prevented it from being successfully used because of the duffculty in controlling it. Its admixture with percleum, it is claimed, bas obviated the latter difficulty, and the inventors of the process say the experiments seem to confirm the statement that while the power can be increased or diminished almost insigniancously, an assured pressure 100 per cent. greater than m can be obtained at a nominal cost.

of steam can be obtained at anominal cost.

"The inventors are Mr. Elgar Smith and Mr. J. R. Milligan, who have taken out patents in this country, England, Germany, France, Austria, Haly, Holland, Belgium, Spain, Australia and Canada. The control of the American patent will, it is understood, pass into the hands of a New York company.

"The northean used to be be included."

6-The personal results and some acres company.

6-The personal results in the continuous states of the continuous states and water is mixed with it and with the bi-sulphide of carbon. The great economy results from the fact that the latter, which is extremely cheap, can be used over and over again, vaporizes extremely low temperatures, so that little fire is needed, and water in the boiler need only be kept at any point above 160 extremely low temperatures, so that little fire is needed, and the water in the bolier need only be kept at any point above 160 degrees. This can be done by a light or stack fire. The vapor, instead of being blown off, passes into a condenser, seems instantly to resume its first condition, and can be immediately used over

again the same way as condensation water is. A single pound of the material, costing ten cents, it is claimed, can be used for an entire week, making it about as costly as water, while only 25 per cent, as much coal will be required in Keeping up the boiler heat as is necessary for steam engines. Should this prove to be true, the advantage to occur steamers in the saving of space and ton-mage in carrying coal, as well as in the cost of the latter, will be The cost of the small quantity of coal oil used is repsented as practically nothing."

THE VERONICA .- The Boston Heraldhas the following concern Ing the Vennica, recently advertised for sale in this paper; "The Vennica recently advertised for sale in this paper; "The Veronica is three years old, has salied in thirteen races, and won thirteen prizes. She salied three times last season with the Hannerett, and beat het vevery time, the last belog in the Union Regatia of the East Hoston Yacht Club, when the Veronica beat the nuncrelt fen minutes; also in the Union Regutin of the Dorches-Yacht Club, when Capt. Daniels was ruled out for wrong measurment.

YE CHUISERS.—It is without doubt a fact that the longer people pursue yachting asan amusement, the less they care about racing and the more they like to cruise. The new man, with the new yacht, is always a racing man, and may always be known by the ardor with which he enters into all sorts of serub "brushes" ardor with which ho enters into all sorts of zerub "misuses" with every yacht or boat ho meets. After a few yearn' yachting experience he invariably gets over this and goes about his business or pleasure quietly, reserving his racine powers for racing days. By and by he gets over racing altogether, and goes in for cruising or quiet sails with a few friends, leaving the other portion of the sport for those who are in turn beginning. Of course are ardent lovers of racing who never get over their desire there are around lovers of racing who herer get overtheir desire to do things fast, and it is to this class the clubs look to keep up the regatth. As clubs grow older, however, this class decreases in size, and the regatth in consequence decreases in interest. It may be argued from these premises that as yacht racing derecases, so do the clubs and real yachting men increase. It does not, therefore, follow that the decline in racing of yachting circles shows a corresponding decline in the interests of yachting.—S. F. Olumptan.

VAST SAIR LOFT.-Messrs, Lapthorne, the A VAST SAIL DOTH-BISSIS LADMORDS, the to-move and enterprising sail-makers of England, have supplied the sails for over fifty yachts this spring; and most of the yachts are of large tennus of five hundred and six hundred tens, and sailing yachts from the largest down to the five-tonner, each with from nine to fifteen That is an enormous business.

NIGHT MEDICAL SERVICE .- Dr. William F. Thoms, President of NIGHT MEDICAL DERVOR.—In Mindry 1, 100002 Per the Humane Society, reports that the "Seamon's Aid and Protective Association" have in active operation a night medical service, at their free dispensary in the New York Nautical School, & Madison street, where a doctor can always be found.

Madison street, where a doctor can aways be found.

BROOKLYN XACHT CLUE.—Officers for the year: Commodore,

R. S. Elliott; Vice-Commodore, Henry S. Steer; Rear-Commodore, Edmund Yard, Jr.; President, Henry W. Turner; Secretary

and Treasurer, William T. Lee; Assistant Secretary, William R. Wadsworth; Measurer, John M. Sawyer; Judge-Advocate, Henry

C. Place; Trustees, Henry S. Wood, Samuel Mellroy, J. F. Ames, F. E. Williams, President and Secretary 21-0ficio members; Ames, F. E. Williams, President and Secretary x-officio members' Committee on Membership, S. L. Blood, F. W. Jenkins, J. F. Ames; Regalta Committee, C. G. Gunther, J. F. Ames, F. E. Williams. We learn that the club has freed itself from the undestrable element which unfortunately found its way into membership some timeago, and that hereafter a close scrutiny of candidates for admission will be the rule. Individuals with a record as swindlers and fallbirds will be no more admitted to the resuscitated E. Y.C. than to any other club, and therefore the flet flying the red ponnant with white star ought to secure a new lesso of life.

SPARS FOR THE RACERS .- From the Spirit of the Times SPARS FOR THE RACERS.—From the Spirit of the Times we cull the following:—The Crusader's spars are as follows: Mainmast, 73ft; foremast, 71ft; main topmast, 36ft; fore topmast, 3fft; main boom, 56ft; main gaft, 2fft. fore boom, 2ffft; fore gaft, 2fft. the way from the way from the way for and beveled on the lower side. Its extreme length is 40ft. She is to be fitted with a forestay, which is to be set up on the bowsprit, 6ft. outside of the knightheads. From the foremast to the forestay is 25ft; trom the forestay to the jibstay, 16ft.; from jib-

stay to the flying Jibstay, 13/ft.; and from there to the topmast stay is 4ft. Those of the Fanny, sloop, now owned by Mr. Bryant, of Boston, are: Mast, 80ft.; topmast; 50ft.; boom, 65ft.; gar, 33ft.; bowspift, outboard, 55ft. She is to be fitted with a forestay which is to set up 3/ft, outside of the knightheads, so that the which is to set up 3/1t, outside of the knightheads so that the distance from the mast to the forestay is 2/1t, and from the fore to the jüstay 197t. And those of the Republic, building at Nyack, are: Mainmast, 75ft.; foremast, 75ft.; foremast, 75ft.; foremast, 75ft.; foremast, 75ft.; foremast, 75ft.; and 12ft.; mainboom, 6/1t.; maingaff, 3/1t.; foreboom, 15ft.; foregoff, 2/1t.; mainboom, 6/1t.; foreboom, 15ft.; which is loft, with oit, poir; the lorestay goes to be ample-heads, and she has 25ft. to her fore staysail.

Tirs Year's STYLE.—From the New York Sun: Fashions change with yachtsmen as with others, and large schooners are not to be in favor this season, the run being on steam yachts and small sloops. In the latter class is what is termed the compromise

small sloops. In the latter class is what is termed the compromise cutter—a center-board light-draught sloop with entter rig. They are also built with keels, and many, both keel and eenter-board, are to be in commission this year.

YACHT BUTLOTOA AT PARKATO—McGeahan, otherwise known as "PAL" has been putting up the frames at a lively rate. One is a center-hoard sloop for Messrs. Lutz & Jones. She is seft, over all, 40ft, water line, 15ft, beam, 5ft, depth of hold, and is to be a flyer. He has just finished a 24ft, open boat which is to go to New Orleans to compete with the famous Nusic S. Drawings are completed for a yacht for New York parties. She is to be 6fft, over all, 55ft, keepth to go to Charleston. She is to be 56ft, over all, 15ft, beam. all, 15ft, beam.

all, 15t. beam.
OPENING OF THE SEASON.—The City Point Mosquito Fleet sailed their annual opening race off City Point, Boston. April 3th. First class, from 15 to 15th; second class under 13th; course, two miles. Won by Sport, beating Roston, Listic, Visionan, Unknown and Fyelic in the order named. Second class, Sadic won, beating

Egeria, Startight and Printen.

Inox Ferrayno.x—Mesers. Ward & Stanton, of Nowburg, have
Just built an iron forryboat, 200 feet long, for the Hoboken Ferry
Company. Some of her bow-plates are three-putarters of an inch
thick, and look as though they could resist the heaviest of the North River ico. As an additional precaution, however, she is to o have a collision bulkhead at each end. She will run to Barclay

MODEL YACHT CLUB.-A new model club has been formed in stoom. Arous out the model cittle has been formed in this city with the following officers; Commodors J. A. Aville Secretary, J. W. Purrington; Measurer, George Whitliaw. Application will be made to the Park Commissioners for the use of the lake in Central Park at One Hundred and Tenth street.

PUBLISHERS' DEPARTMENT.

[From the Banks of the Hudson.]

NEWBURG, Oct. 20th, 1879.

H. H. WARNER & CO., ROCHESTER, N. Y.—GENTLE-MEN: A lady of over seventy years of age, in failing health for over a year, has been using Warner's Safe Bitters on my recommendation. She feels very grateful for the benefit she has derived therefrom, and says that until she used it her stomach could bear no vegetable food for over three years. I believe it to be a certain specific for dyspepsia.

J. T. JOSENN, M. D.—(Adv.)

—C. L. Ritzman, of New York, writes: "The rubber ball, or explosive target, I think is an excellent thing, as a man can carry a hundred or more in his pocket, doing away with the expense of transportation. There can be no dispute arising as to a ball being hit or not, and showing plainer than any other ball." Sea advertisement Diving Decoy Co.—(4dv. ing plainer than any our ing Decoy Co.—[Adv.

—The superb and very popular steamer, C.H. Northam, resumes her place on the New Haven line to-day, leaving Peck Slip at 3 P.M. and New Haven at 12 P.M. She has been newly painted throughout, and otherwise put in complete order for summer travel. The usual strambout trains connecting with these steamers will be running first week in May.—|Adv.

SPORTSMEN:

The Pennsylvania R. R. Co., Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RAGE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the dif-ficulties and dangers of reshipment, while the exfleultics and dangers of reshipment, while the ex-cellent cars which run over the smooth steel tracks enable STOOK TO BE TRANSPORTED without failure or injury. THE LINES OF

Pennsylvania Railroad Company also reach the best localities for

GUNNING AND FISHING

In Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RINOVA, BEDFOUR, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Miscellaneous Advertisements.

Shot Gun and Rifle Powders Revolutionized.

Champion Shot Gun and Rifle POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. CaptainBogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world, Address
